THIRD EDITION JUNE 1944

UNITED STATES
GOVERNMENT PRINTING OFFICE
WASHINGTON 1944

ACKNOWLEDGMENT

The Commission wishes to express its gratitude to commanding officers, appointing officials, medical officers, safety engineers, foremen, ship apprentices in the various shore establishments of the Navy Department and in the field establishments of the War Department, the Post Office Department, and other agencies for the assistance which they gave to the Commission's regional medical officers. The cooperation of these officials made possible the accumulation of the information contained in this manual.

HARRY B. MCCRICK
President.

INTRODUCTION

This manual is the current product of the first study of the kind by medically-trained personnel endeavoring to standardize minimum physical requirements necessary for various positions in the Federal civil service. The information was obtained for two major purposes:

1. To utilize in a judicious manner the services of the physically handicapped in Government service, with a view to compensating for labor shortages.
2. To obtain experience in the placement of the physically handicapped which can be used for the benefit of disabled veterans and industrial workers during and after the war.

Within the past 30 years physical standards for employment have experienced two extremes. During the First World War and the period immediately preceding it, the standards allowed the employment of many persons who were justifiable industrial risks. Since the First World War, the pendulum has swung to the opposite extreme. Physical requirements have developed which have not always been justifiable from the point of view of efficiency and safety. The Commission's survey is an attempt to effect a balance in standards, and to render the preemployment examination an instrument for placement.

The surveys were not made by industrial specialists, but by regional medical officers of the Commission. Their decisions were based mainly upon objective studies. For industrial information, the medical officers depended, to a considerable degree, upon safety engineers, medical advisors, foremen, and supervisors in the establishments which they visited.

Figure 1 represents the job analysis form used in studying each position. This form is divided into three major parts:

1. Functional factors of the position.
2. Environmental factors of the position.
3. The results or recommendations of the medical officer making the survey as to minimum physical requirements necessary to perform the duties of the position. Supplementary information, such as comments by supervisors, foremen, safety engineers, and medical advisors, is provided for under "Remarks."

The surveys represented the first major phase of the research program. The second phase consisted of an evaluation of the reports submitted by the regional medical officers on the basis of certain fundamental principles devised by the Medical Division of the Commission for placement. These were designed to eliminate inconsistencies and discrepancies and also to test the medical technique used in the subject of placement in detail.

The information contained in the manual will be subject to revision from time to time, to provide for new positions which are found to have placement patterns different, and also to bring the contents into accord with changes in industrial practices and in conditions of the labor market. Revisions will be based upon recommendations by vocational training agencies, observatories of the regional medical officers, and suggestion of management.

This edition of the manual contains a consideration of approximately 3,000 positions in 102 Governmental establishments and in private establishments holding Government contracts. The coverage has a wide geographical range and includes practically all the important governmental industrial establishments. The positions studied actually represent many thousands of positions.

The processing of all the factors to be considered in utilizing information obtained on surveys involved establishing a disability code, a code for regions and particular establishments and job occupations codes of positions wherever possible according to the United States Employment Service Dictionary of Occupations. Thus, by this system of processing the information was subdivided according to disability regions, particular types of Government industry, and other Government activities, classifications to specific types of defects, and additional sources applicable to the positions listed in the manual.

(VII)

Titles, Occupational Codes, Region and Establishment Codes, and Disability Placement Codes.

The titles of positions as they exist in the various establishments are according to pay roll designations in most instances. Positions with identical duties may vary in titles according to establishments and in some instances within the same plant. Many titles of position listed on pay rolls were nonspecific. For example, employees were listed as machine operators with no indication in the title as to which type of machine is operated. In most instances, however, the regional medical officer indicated the particular type of machine operated. Where this information was not submitted, machine operations common to the particular industry in which the position occurred were considered in evaluating the information. No effort was made to effect a standardization with respect to the use of modifiers before or after titles.

Occupational code numbers were given to each position listed in the manual according to the United States Employment Service Dictionary of Occupational Titles. Since all the positions in the Federal Government are not included in the dictionary, it was not always possible to assign a code number to the position to indicate the exact job classification, or which would indicate the exact processes involved in the performance of the duties of the position. Where it was not possible to find occupational code numbers in the dictionary to fit exactly the position in a governmental establishment, occupational code numbers of positions approximating or closely akin to the Government position, were used. In like manner, when code numbers of the proper industrial designation could not be found to fit the type of industrial activity involved in the Government position under consideration, code numbers of industrial activity closely akin to that in Government were used.

The dictionary and its latest available supplements were used in providing the information in this manual. Additional surveys by the United States Employment Service of positions not covered in the dictionary or the present supplements will modify existing code numbers given because of the positions listed in this manual.

A complete explanation of the occupational classifications and code may be obtained from the United States Employment Service Dictionary. It will suffice here to mention that the occupations are divided into major groups which contain smaller subgroupings. The codes are constructed to indicate relationships of subgroupings of occupations to major groups of occupations. The first three digits of the code indicate the major group or division of occupation, while the second three digits indicate the subdivision.

The code numbers devised to show regions and establishments where positions exist indicate the region by the first digit or letter and a particular establishment by the next two digits (see fig. 2, pp. IV, V, XI, and XII). Additional establishments which may be standard are provided for by this digit system.

The disability placement codes (see fig. 3, p. XII) are divided according to the following types of defects:

1. Orthopedic defects.	3. Hearing defects.	5. Miscellaneous diseases.
2. Vision defects.	4. Chronic diseases.	

Additional code numbers may be employed if it is necessary to consider more subdivisions under these four main classes of defects.

Diseases, disabilities, or deformities which frequently present placement problems, but which are not coded in the Manual:

1. Epilepsy.	3. Diabetes.	5. Heroin.
2. Syphilis.	4. Peptic ulcer.	

Use of the Manual

The manual is for the use of persons engaged in training, recruitment, and placement activity for the Federal civil service. It contains information as to which positions are suitable for the various types of physical handicaps, and the location of these positions. In issuing the manual, the Commission is giving recognition to the fact that getting qualified handicapped persons on appropriate jobs must be based on a thorough knowledge of both the physical defects and the job. In this connection the manual will offer the basis of negotiations in the fields of training, recruitment, and placement. It is expected, however, that negotiations for placement will be tempered by the results of consultations between regional medical officers of the Commission and the medical advisors or safety engineers responsible for placement policies in the establishments. These consultations are necessary since change in production policies may involve complete change in now, duties for the positions.

¹ A combination of disability code numbers listed for any particular position is not necessarily to be interpreted to indicate that a combination of all the defects would be insuperable for placement in that position.
² With other member intact and fully functioning.

³ One or more fingers missing on secondary hand with good residual gripping power in that hand and normal function of primary hand. In some positions good gripping power not required in secondary hand.

⁴ Amputation of lower extremity with satisfactory prosthetic and with other lower extremity intact and fully functioning.

⁵ One or more fingers disabled on secondary hand with good residual gripping power in that hand and normal function of primary hand. In some positions gripping power not required in secondary hand.

⁶ Sense of hearing not sufficient for ordinary purposes of life. Code number may be tripled if required, depending upon amount of communication required in routine performance of duties of position by operation.

⁷ Sense of hearing although defective, functional with or without hearing aid.

⁸ Organic heart disease, other than coronary disease, fully compensated without history of decompensation.

⁹ Tuberculosis healed or arrested according to classification in National Tuberculosis Association. For may be considered.

PART I

THREE ADDITIONAL ACCORDINGS TO IMPORTANT GOVERNMENTAL INFORMATION

following occupations are listed according to the particular Governmental entity in which they occur. It will be noted that certain occupations occur in two or more different types of industry or activity.

They follow very closely the pay roll designation and the occupational titles are according to the United States Employment Service Occupational.

They are grouped according to region and establishment in which they occur (pp. IX, X, XI, and XII).

Sixty-four code numbers are listed in combination. As pointed out in the disability code key, a combination of disability codes for a particular job is not to be interpreted necessarily to indicate that a combination of all six would be acceptable for placement in that position (see pp. 9, p. XII), but our occupations have been listed according to the following important ones:

Aircraft industry: This title covers those activities by Government establishments dealing with the manufacture, repair, and inspection of aircraft and aircraft parts.

Ammunition, explosives, and firearms: This title covers military ammunition, small arms ammunition, mortal shell components and all types of firearms, including large guns, their mounts and carriages.

Inspection and fabrication of textile and leather goods: These positions are in the Quartermaster Corps of the War Department and at the Naval Clothing Depot in New York City.

Inspection of products of private industry with Government contracts: Under this title are listed Inspector positions in the Navy Department, War Department, and other Federal agencies or departments that have contracts with private establishments. These Inspectors may be permanently assigned to a private establishment or may be shifted from one to another. Their duties and physical qualifications vary widely with the type of establishment and product to be inspected.

Maintenance, reclamation, and miscellaneous activities: Under this title are included in the United States Engineers Department at large, including occupations in maintenance of waterways, dams, locks, and public buildings, positions in the Quartermaster Corps not covered under the title "Inspection and fabrication of textile and leather goods," positions in the Bureau of Reclamation of the Department of the Interior, positions in the Treasury Department, particularly in United States Government banks, and positions in governmental institutions such as veterans hospitals and Federal correctional institutions. A number of occupations performed in this group are in private industry holding Government contracts.

Post Office Department: Certain positions in the Postal Service of the Post Office Department, i.e., Mailmen, Drivers, Firemen, Laborers, Movers, Mailmen, Elevator Operators, have duties sufficiently similar in nature in all post offices that a survey of the three largest post offices in each region was believed sufficient to cover the physical factors involved in the performance of the duties of these positions. Other positions such as Substitute Railway Postal Clerk, Village Carrier, Clerk-Village Carrier, Town Carrier, have duties which may differ markedly in one section from another due to environmental and climatic conditions. It was therefore decided that the most practical way to survey these positions was to select four typifying each geographical and climatic zone by a region.

Ship building and ship repair:

AIRCRAFT INDUSTRY

(NOTE.—Asterisk (*) before title indicates that there is an additional category applicable to the position)

7-10, 023	Parachute repairman	R02	03, 06, 08, 12, 15, 17, 18, 20, 30, 31, 33.
6-17, 350	Pattenmaker, plaster	R02	05, 06, 08, 12, 15, 17, 18, 20, 30, 31, 33.
1-38, 01	*Pehelped storekeeper	R02	05, 15, 17, 18, 20, 30, 44.
6-83, 411	Radio repairman	R02	03, 06, 08, 12, 15, 17, 18, 20, 30, 44.
6-03, 120	*Rubbisher	R02	06, 08, 18, 20, 33, 44.
0-03, 730	*Shamblesetter and helper	R02	03, 13, 15, 17, 31, 33.
0-06, 03	Safety inspector	R02	06, 15, 17.
0-27, 504	Sewer	R02	05, 06, 08, 12, 15, 17, 18, 20, 30, 31, 33, 37, 44.
4-82, 310	*Temperer	R02	05, 06, 08, 12, 15, 17, 18, 20, 30, 31, 33.
0-70, 310	Thod nuker	R02	05, 06, 08, 12, 15, 17, 18, 20, 30, 31, 33, 37, 44.
4-35, 720	Upholsterer	R02	05, 06, 08, 12, 15, 17, 18, 20, 30, 31, 33, 37, 44.
6-03, 310	*Wineworker, aviation	R02	05, 06, 08, 12, 15, 17, 18, 20, 21, 30, 31, 33, 35, 44.
6-83, 545	*Aircraft armament mechanic	R02	03, 06, 08, 12, 15, 17, 18, 20, 30, 31, 33, 44.
0-03, 01	*Cleaner, photons	R02	06, 08, 13, 18, 20, 21, 28, 30, 37, 44.
0-03, 01	*Cleaner, spark plug wrench	R02	03, 08, 13, 18, 20, 21, 28, 30.
0-03, 01	*Labourer, spark plug wrench	R02	06, 07, 08, 09, 12, 13, 18, 20, 22, 24, 26, 30, 31, 44.
7-10, 014	Mubber, plastic, plexiglass	R02	05, 06, 08, 12, 18, 20, 30, 31, 33, 44.
0-03, 01	*Parker, spark plug wrench	R02	06, 07, 08, 09, 12, 13, 18, 19, 20, 22, 23, 24, 28, 30, 31, 44.
6-03, 030	*Worker, airplane fabric	R02	06, 08, 12, 18, 20, 29, 30, 33.
0-02, 150	Worker, leather	R02	01, 03, 06, 08, 12, 13, 15, 17, 18, 20, 24, 30, 31, 33, 44.
0-30, 51	*Observer in meteorology	R23	32.
6-30, 030	*Aircraft fabric worker	R25	30, 31, 33.
0-80, 050	*Sheet-metal worker	R25	05, 13, 33.
0-78, 032	*Labourer, classified, reconditioning base clamps	R29	06, 08, 12, 18, 20, 21, 28, 30, 31, 33, 37, 44.
0-03, 01	*Labourer, classified, cleaning sparkplugs	R29	06, 08, 12, 18, 20, 21, 28, 30, 31, 33, 37, 44.

AIRCRAFT INDUSTRY *Continued*

Occupational code	Title of position	Region and establishment	Usability placement code
8-78. 10	*Laborer, classified, sorting bolts and nuts.	R29	06, 08, 12, 13, 19, 21, 23, 30, 31, 33, 37, 41.
0-50. 11	*Lay-out man.....	R29	05, 13, 17, 33
5-80. 300	*Mechanic, carburetor.....	R29	05, 06, 08, 13, 15, 17, 19, 20, 30, 33, 37, 41.
5-83. 447	*Mechanic, radio.....	R20	05, 06, 07, 12, 13, 17, 19, 20, 22, 24, 30, 33, 37, 41.
0-50. 11	*Photographer.....	R29	05, 13, 17, 33
0-49. 202	*Worker, aircraft plexiglass, mechanic and metal-smith.	R29	05, 06, 08, 12, 13, 17, 19, 20, 24, 28, 30, 33, 37, 41.
5-03. 030	*Worker, aviation fabric.....	R29	05, 06, 08, 12, 13, 17, 19, 20, 34, 36, 39, 41, 33, 37, 41.
7-16. 071	*Worker, instrument, luminous dial painter.	R29	05, 06, 08, 12, 13, 17, 19, 20, 31, 30, 31, 33, 37, 41.
9-03. 01	*Laborer, classified, spark-plug cleaner.	R31	05, 06, 07, 08, 09, 13, 17, 19, 20, 22, 24, 26, 30, 33, 37, 41.

AMMUNITION, EXPLOSIVES, AND FILM SECT.

4-52. 481	*Ordnanceman.....	102	05, 06, 08, 12, 13, 15, 17, 19, 20, 37.
2-84. 10	*Janitor.....	103	23, 30, 33.
7-94. 100	*Apprentice machinist.....	105	06, 08, 13, 20, 30, 37, 41.
4-75. 010	Machinist (general).....	105	06, 08, 13, 19, 20, 30, 37, 41.
2-01. 03	*Patrolman.....	105	44.
5-88. 020	*Rigger.....	105	01, 03, 06, 08, 12, 13, 15, 17, 19, 20, 30, 31, 33, 37, 41.
1-88. 01	*Storekeeper.....	105	01, 03, 06, 08, 12, 13, 15, 17, 19, 20, 30, 31, 33, 37, 41.
7-94. 100	*Apprentice, mechanical trades.....	203	05, 06, 08, 12, 13, 15, 17, 19, 20, 37.
8-52. 42	*Bench assembler.....	203	06, 08, 12, 13, 19, 20, 22, 24, 31, 30, 31, 33, 37.
4-80. 010	Blacksmith.....	203	30, 31, 33.
0-52. 432	*Block-stress operator, explosives hauler,	203	30, 31, 33.
6-30. 114	*Box maker.....	203	31, 33.
8-52. 41	*Classified laborer.....	203	05, 17, 30, 33, 37, 41.
9-04. 44	*Classified laborer, sprayer.....	203	06, 08, 12, 13, 19, 21, 30, 31, 33, 37.
9-52. 451	Crystallizer operator (tetryl explosives).	203	30, 31, 33.
8-52. 42	Cup filler.....	203	06, 08, 12, 13, 19, 20, 31, 33, 37.
8-52. 42	Cup-plate filler.....	203	06, 08, 12, 13, 19, 21, 30, 31, 33, 37.
6-52. 420	*Dry-house man (tetryl explosive).	203	12, 24, 30, 31, 33, 37.
4-97. 010	*Electrician, field.....	203	30.
8-52. 42	*Explosives operator, laborer	203	06, 08, 12, 13, 19, 20, 21.
9-04. 44	*Flare-parachute assembler.....	203	05, 06, 08, 12, 13, 19, 20, 31, 33, 37.
0-52. 445	*Graining press operator, explosives hauler.	203	31, 33.
4-78. 071	*Inspector, machine shop.....	203	06, 08, 12, 13, 19, 20, 31, 33, 37.
6-52. 443	*Macaroni-press operator (screen-press operator).	203	30, 31, 33.
8-52. 42	*Macerator operator, explosives hauler.	203	31, 33.
4-75. 010	*Machinist (maintenance).....	203	
8-52. 42	*Mechanical time-fuse operator,.....	203	06, 08, 12, 13, 19, 20, 24, 30, 31, 33, 37.
6-78. 100	*Millwright.....	203	33.

AMMONIUM, EXPLOSIVES, AND PRECARGO—Continued

Occupational code	Title or position	Region and establishment	Disabled placement code
6-53-411 *Mixer operator, explosives handler		203	31, 33,
8-53-42 *Munition handler		203	05, 17,
8-78-10 *Operator, automatic-ejection machine		203	05, 06, 08, 12, 13, 17, 18, 20, 24, 30, 31, 33, 37,
6-78-083 *Operator, drill press		203	05, 06, 08, 12, 13, 15, 17, 18, 20, 24, 31, 33,
6-88-026 *Operator, punch press machine		203	05, 06, 08, 12, 13, 17, 18, 20, 31, 33,
6-78-083 *Operator, reaming-machine		203	05, 06, 08, 12, 13, 15, 17, 18, 20, 21, 31, 33,
8-78-10 *Operator, spring-making machine		203	05, 06, 08, 12, 13, 17, 18, 20, 24, 30, 31, 33, 37,
6-78-146 Operator, thread-spreader		203	05, 06, 08, 12, 13, 15, 17, 18, 20, 24, 31, 33,
4-78-021 Operator, turner lathe		203	05, 06, 08, 18, 20,
8-78-10 *Pickling operator		203	05, 17, 31, 33,
8-53-431 *Powder trucker, explosives		203	31, 33,
6-53-433 *Powder cutting operator		203	31, 33,
8-53-431 *Pressure operator, explosives handler		203	05, 17,
6-54-053 *Primer assembler		203	05, 08, 12, 13, 20, 24, 30, 31, 33, 37,
6-54-060 *Primer, inserter		203	05, 08, 12, 13, 20, 30, 31, 33, 37,
4-80-010 Sheet-metal worker		203	05, 06, 08, 12, 13, 18, 20, 30, 31, 33, 37, 41,
8-53-42 *Shelving operator		203	05, 08, 12, 13, 20, 24, 30, 31, 33, 37,
5-27-010 *Sign painter		203	05, 08, 18, 20, 30, 31, 33, 37,
6-53-480 *Tetryl blaster operator		203	05, 17, 30, 31, 33,
0-52-407 *Tetryl-balsolver operator		203	05, 17, 30, 31, 33,
4-53-446 *Tetryl-nitration operator, explosives handler		203	05, 17, 30, 31, 33,
6-78-146 *Threading-machine operator		203	05, 06, 08, 12, 13, 18, 20, 30, 31, 33,
4-76-210 Tool maker		203	05, 16, 18, 20, 31, 33, 37,
8-81-110 *Tool grinder operator		203	05, 06, 15, 20, 31, 33, 37,
4-87-230 Tool heat treater		203	31, 33,
4-86-030 Welder, electric		203	05, 17,
4-86-130 Welder, oxyacetylene		203	05, 17,
8-53-41 Apprentice, mechanical time base, female		203	05, 06, 18, 20, 31, 33, 37, 41,

PART II

POSITIONS SUITABLE FOR PERSONS WITH ORTHOPEDIC HANDICAPS

Of the orthopedic crippling conditions, only the permanent or static deformities could be considered in connection with placement. Arthritis, ankylosis, or chronic disease processes of the bone, blood vessels, and muscles causing orthopedic deformities or disability are not suitable for initial placement, in view of the possibility of the exacerbation involving one or more additional organs or members of the body, which may place additional physical limitation on the employee not anticipated in his vocational training; i.e., the disease itself, apart from the resulting deformity, also may impose additional physical limitation on the employee's activity.

Atrophies and deformities due to poliomyelitis and myopathies due to accidents are common. These may be used for all practical purposes being static or permanent physical handicaps, and persons with such defects are the most suitable of the orthopedic class for judicious placement in Government industry. In the placement of the physically handicapped of the orthopedic group, it is important that complete medical reports be obtained. When necessary, depending on the nature of the handicap, special reports from orthopedic specialists should be requested. Extracorporal hazards must be considered in placement. For example, there are a number of positions in Government establishments in which persons with orthopedic defects could be placed, however, the surroundings, apart from the immediate environment to which such persons often carry on their duties, are hazardous. This will necessitate placement in shops with less hazardous environment, away from yard locomotives, trucks, moving cranes, and other machinery. As a general rule, machine shop work is particularly suitable for persons with orthopedic handicaps.

Arm and hand disabilities will be found to offer more suitable placement problems than defects of the lower extremities, except when the functional factors of the job are changed to meet the impairment by job modification. It is expected, however, that improvement in orthopedic appliances desired for the arm and hand disabilities will go far in making the placement position for persons with such disabilities more favorable. It has been found that the range of workability for such persons in governmental industrial employment rate is determined only by a strict correlation of the extent of the impairment with a capital analysis of all functional factors of the arm or hand involved in the performance of duties. If the functional factors indicate that only one good arm or one good hand is necessary, no particular attention should be given to the efficiency of the orthopedic appliance of the defective member. The functional position of numerous occupations in Government industry can be broken up to allow for the loss of an arm or a hand. In other occupations, an artificial appliance and one good arm or hand would enable the handicapped to perform the duties satisfactorily. In the majority of governmental industrial positions the loss of the ring or little finger on one hand has not been found to impair efficient performance of a job. Of course, loss of a thumb, on either hand, necessitates a careful review of the functional factors of the position, since this defect usually renders the employee incapable of picking up, holding, and manipulating small articles—very common functions present in a large number of skilled trade positions.

The following occupations with placement potentialities have been grouped according to specific types of orthopedic defects, as follows:

1. Amputation of...

- (a) Arm.
- (b) Hand.
- (c) Fingers.
- (d) Leg.
- (e) Legs.
- (f) Foot.
- (g) Feet.

2. Disability or deformity of...

- (h) Hip or shoulder.
- (i) Arm.
- (j) Hand.
- (k) Fingers.
- (l) Leg.
- (m) Legs.
- (n) Foot.
- (o) Feet.
- (p) Back.

Title of position	Region and establish- ment	Title of position	Region and establish- ment
Cleaner, whelown		Repairman, radiator (motor ve- hicle service)	009
Clerk		Superintendent (motor vehicle service)	009
Clerk (motor vehicle service)		Supervisor, route (motor vehicle service)	009
Clerk, junior stock		Watchman	009
Clerk, special (motor vehicle service)		Assembler (motor vehicle service).	010
Clerk, substitute		Blacksmith woodworker (motor vehicle service)	010
Clerk, substitute railway postal		Carpenter	010
Custodian, assistant		Carpenter helper	010
Dispatcher (motor vehicle serv- ice)		Chairwoman	010
Dispatcher, chief (motor vehicle service)		Chaywotan, head	010
Driver mechanic (motor vehicle service)		Chief, records (motor vehicle service)	010
Electrician		Chief, supplier (motor vehicle service)	010
Electrician, water cooler		Cleaner, whelown	010
Flagbearer		Clerk, junior	010
Fireman		Clerk, stock	010
Fitter		Foreman, assistant	010
Foreman, large shop		Foreman, junior assistant	010
Garageon, delyver (motor vehicle service)		Dispatcher (motor vehicle serv- ice)	010
Guard, captain		Electrician	010
Guard, lieutenant		Elevator starter	010
Janitor		Engineer	010
Laborer		Engineer, assistant	010
Laborer (hulling and sacking)		Engineer, chief	010
Lampist		Foreman laborer	010
Machinist		Garageon driver (motor vehicle service)	010
Matron		Gimor	010
Mechanic, assistant, elevator		Janitor	010
Mechanic, assistant, letter-box		Laborer	010
Mechanic, automobile (motor vehicle service)		Lampist	010
Mechanic, engineering-machine		Machinist	010
Mechanic, chief (motor vehicle service)		Machinist (motor vehicle service)	010
Mechanic, elevator		Matron	010
Mechanic, foreman		Mechanic, assistant, elevator	010
Mechanic, general		Mechanic, chief (motor vehicle service)	010
Mechanic, general (motor vehicle service)		Mechanic, elevator	010
Mechanic, letter-box		Mechanic, general (motor ve- hicle service)	010
Mechanic, portefpal, elevator		Mechanic, general, maintenance	010
Mechanic, seale		Operator, freight and passenger elevator	010
Mechanic, stamping and number marking		Operator, telephone	010
Mechanic-in-charge (motor vehi- cle service)		Painter (motor vehicle service)	010
Oiler		Superintendent (motor vehicle service)	010
Oiler-patrol		Supervisor, route (motor vehicle service)	010
Operator, freight and passenger elevator		Vulcanizer (motor vehicle serv- ice)	010
Operator, telephone			
Painter			
Painter (motor vehicle service)			
Plumber			
		Cabductorker	011
		Carrier, aotsellnto, postel-post	011

Positions Suitable for Persons With Disabilities or Handicaps (18-38)

Title of position	Location and employment area	Established place of work	Reg. dis- abled per 100
Aircraft-maintenance supervisor, junior assistant		Operator, jet fighter and trainer	60
Aircraft-radio mechanic, bench	601	Operator, jet fighter and trainer	60
Chief of photoproduction	601	Groundkeeper, tractor parts special	60
Clerk, junior, property and supply	601	Operator, jet fighter and trainer	60
Foreman, carpenter shop	601	Naval inspector, insulation	60
Foreman, general mechanic	601	Naval inspector, insulation, Ohio	60
Mechanic, radio	601	Naval inspector, insulation, Williamsburg	60
Mechanic, senior, aerial photographic camera	601	Naval inspector, insulation, Cincinnati, Ohio	60
Pottermender	601	Naval inspector, insulation (asbestos and mineral), Cincinnati, Ohio	60
Pottermender, senior	601	Naval inspector, insulation, Cincinnati, Ohio	60
Photolithographic reproducer's helper	601	Naval inspector, insulation, Cincinnati, Ohio	60
Stockkeeper, light-duty	601	Naval inspector, insulation, Cincinnati, Ohio	60
Aircraft-engine mechanic, bench		Naval inspector, insulation	60
Blacksmith	601	Naval inspector, insulation, Cincinnati, Ohio	60
Blacksmith's helper	601	Naval inspector, insulation, Cincinnati, Ohio	60
Boltermeker	601	Naval inspector, insulation, Cincinnati, Ohio	60
Boltermeker's helper	601	Naval inspector, insulation, Cincinnati, Ohio	60
Carpenter, shop	601	Naval inspector, insulation, Cincinnati, Ohio	60
Machinist, production	601	Naval inspector, insulation, Cincinnati, Ohio	60
Operator, tractor	601	Naval inspector, insulation, Cincinnati, Ohio	60
Clocker, clerical	601	Naval inspector, ordnance, Amesbury, Mass., Cincinnati, Ohio	60
Clocker, clerical, junior	601	Naval inspector, ordnance (moderate), Cincinnati Brown Lamp Co., Cincinnati, Ohio	60
Clocker, clerical, senior	601	Naval inspector, ordnance (moderate), Cincinnati Brown Lamp Co., Cincinnati, Ohio	60
Examiner, clothing	601	Naval inspector, ordnance, heavy insulation, Cincinnati Brown Lamp Co., Cincinnati, Ohio	60
Foreman, packer	601	Naval inspector, ordnance, heavy insulation, Cincinnati Brown Lamp Co., Cincinnati, Ohio	60
Harness cutter	601	Naval inspector, ordnance, heavy insulation, Cincinnati Brown Lamp Co., Cincinnati, Ohio	60
Harnessmaker	601	Naval inspector, ordnance, heavy insulation, Cincinnati Brown Lamp Co., Cincinnati, Ohio	60
Inspector, leather	601	Naval inspector, ordnance, light insulation, Cincinnati Brown Lamp Co., Cincinnati, Ohio	60
Inspector, interdisciplinary supplier	601	Naval inspector, ordnance, light insulation, Cincinnati Brown Lamp Co., Cincinnati, Ohio	60
Inspector, stoves and ranges	601	Naval inspector, ordnance, light insulation, Cincinnati Brown Lamp Co., Cincinnati, Ohio	60
Inspector, tents and clothing	601	Naval inspector, ordnance, heavy insulation, Cincinnati Brown Lamp Co., Cincinnati, Ohio	60
Inspector, textile and clothing	601	Naval inspector, ordnance, heavy insulation, Cincinnati Brown Lamp Co., Cincinnati, Ohio	60
Inspector, wood products	601	Naval inspector, ordnance, moderate, Cincinnati, Ohio	60
Repacker, stove	601	Naval inspector, ordnance, light insulation, Cincinnati Brown Lamp Co., Cincinnati, Ohio	60
Sashmeker	601	Naval inspector, ordnance, light insulation, Cincinnati Brown Lamp Co., Cincinnati, Ohio	60
Truck dispatcher	601	Naval inspector, plastic (all products), Federated Pro., Cincinnati, Ohio	60
Draftsman, under engineering aids	601	Naval inspector, steel (all products), Federated Pro., Cincinnati, Ohio	60
Engineering aide, other	601	Naval inspector, steel (all products), Federated Redding Mills Co., New York, Tex.	60
Men's uniform, speed auto body builder	601	Naval inspector, tapers, Weller Industries, Inc., Cincinnati, Ohio	60
Drill runner	601	Naval inspector, valves, Lumbroduct, Inc., Cincinnati, Ohio	60
Drill-runner helper	601	Assembler	701
Machinist's helper, general	601	Assembler, traveling, small arm maintenance	701
Overseer, plant, electroplating	601	Assembler, small arm and equipment	701
Foreman, general	601	Assembler, tank and tractor	701
Inspector, engineering material, mechanical	601	Assembler, vehicle shop	701
Inspector of chemicals	601

PART III

POSITIONS SUITABLE FOR THE BLIND OR PERSONS WITH VISION DEFECTS

For the purposes of this manual the Commission has accepted the definition of the blind used by the Services for the Blind of the Office of Education.

"Any person who has not more than 20/200 of visual acuity in the better eye with correcting lenses; or visual acuity greater than 20/200 but with a limitation in the field of vision such that the widest diameter of the visual field subtends an angle no greater than 20°."

The placement of persons who are blind presents very special problems. Several positions are listed in this edition of the manual as suitable for the blind; however, it is anticipated that no experience is gained in the placement of the blind, supplements will contain an additional number of positions.

Employers may hesitate to accept blind persons because of industrial risk and personal care, i. e., transportation and guide service which might be necessary for the blind. In "The Employment Security Review," vol. IX, No. 4, April 1942, published by the Report and Analysis Division, Bureau of Employment Security, a report was made of a study by an electrical concern of accidents involving the physically handicapped in the period from 1929 to 1931. It was found that 23.6 percent of the blind-happened group were injured, whereas 39.1 percent of the control group of nonblind-happened persons employed during the same period were injured. Their interpretation of these figures was that greater caution is exercised by the blind-happened workers in avoiding accidents and that if carefully placed, they are no more, and possibly less, liable to injury than are the nonhandicapped. Often it is unnecessary for the employer to make special provisions for guide service in and out of, or around, plants since all necessary services of this kind is spontaneously offered by sighted associates and it is unnecessary for the employer to be concerned with this subject. Small groups of positions in sheltered environments, involving repetitive work, were surveyed in Government establishments and were found to have placement potentialities for the blind. These positions have been listed in this edition of the manual (see "Positions Suitable for the Blind").

Persons who are blind in one eye with good vision in the other, represent a very important group with placement potentialities. Since it is questionable whether or not one-eyed persons develop a true stereopsis or depth perception, it has not been considered wise to place these individuals in dangerous positions, such as those of crane-truck operator working at high elevations, operators of moving machinery, truck and tractor drivers, feeding-machine operators, and in structural and maintenance jobs in which the duties involve the use of scaffolding. In many of these positions the surveys indicated that a normal healthy, stereopsis, normal muscle balance and also normal color vision are essential.

Positions such as laundress, handymen, and janitors, and certain types of machine and metalwork, were not found to require any unusual visual aptitudes. Positions which have been found on survey to be particularly hazardous, with the possibility of further damaging the visual apparatus, have not been coded to indicate that persons with one eye can be placed in them. Such positions include those in which corrective solutions are need, or where abrasive particles may be thrown into the eyes by grinding or clipping tools.

Many persons with impaired visual acuity fall in the so-called "industrially blind" class. Various ranges of visual acuity have been included in the "industrially blind" classification. The liberal interpretation of the range of industrial blindness may place persons with 20/70 to 20/80 residual visual acuity with optimum correction in the category of "Industrially Blind." A more strict interpretation placed upon this classification limits the range to 20/100 to 20/180 residual visual acuity with optimum correction.

As indicated above, persons with 20/200 or less visual acuity in the better eye with correcting lenses are considered blind according to the definition of Services for the Blind, Office of Education. Poor distant vision, according to industrial standards, with good near vision is considered as being compatible with the efficient performance, with minimum risk, of a large number of positions, in which extra occupational hazards are not serious considerations, such as inspector, machinist, and gauging and calibrating technician.

The positions listed for the blind in this column are suitable for the "Industrial Blind." Many of the positions listed as being suitable for persons who are blind in one eye are suitable also for persons who have impaired visual acuity in both eyes up to and including the industrial range of blindness. The greater degree of loss of visual acuity, the greater the need for care in placement from the standpoint of protecting the individual from further damage of the visual apparatus, and placing him in an environment which is relatively nonhazardous.

PART IV

POSITIONS SUITABLE FOR PERSONS WITH HEARING DEFECTS

The following list of positions represent a large number of jobs of the skilled, semiskilled, and unskilled types that can be carried on without the need of extensive communication.

The most suitable positions for the deaf have been found to be those of a routine type, in which the same operation is performed over and over again. The surveys have revealed some positions in which it was apparent that the deaf might be better employees than persons with normal hearing. Such positions include bellrunker, inspector of material and equipment, and inspector of finished products. The need of communication is not important in these positions.

Hard-of-hearing defects may range from slight impairment of hearing to complete deafness, and there is a corresponding variation in occupational adjustment in persons so afflicted. The origin of the cause of this condition may range from simple obstruction due to cerumen or foreign bodies, acute and chronic otitis media, defective conductive pathes and malformation, to diminished function in perception centers. Many hearing aids offer the same benefit to the hard of hearing that acoustically selected lenses have offered to those with defective vision. There are still instruments on the market designed as hearing aids which lack efficiency, adaptability, and durability. It is important, therefore, that the quality of the hearing aid be evaluated in those persons hard of hearing who are being considered for placement. The efficient and serviceable hearing aid has broadened tremendously the placement possibilities of the hard-of-hearing group. A considerable number of the hard of hearing already have been employed in Federal Government industry and in the Federal services in general and it is anticipated that an even larger group will be placed before the end of the present war. Lip reading, median platters, and industrial vocabularies in training will broaden further the placement field for the hard of hearing.

In the placement of the deaf and the hard of hearing, extra occupational hazards must be given due consideration. For example, a chopper in a navy yard may have hearing which is greatly diminished without affecting materially his efficiency, or without his being a hazard to himself or others at the exact place where he performs his duties; however, it may not be advisable to place him in an open navy yard around heavy moving machinery and locomotives, though he could work in an inside chopper in one of the shops. With very few exceptions, surveys have revealed placement possibilities for machine-shop jobs or structural-shop jobs for the hard of hearing and the deaf. It is not expected that many difficult placement problems will arise in utilizing the services of this group.

In both groups, consideration must be given to psychological or emotional maladjustment which occasionally accompanies these defects and may make the handicapped person an undesirable employee. It will be important for those persons responsible for placement to determine whether deaf or hard-of-hearing persons, who are under consideration for employment, have a healthy attitude toward their defect or environment before placement is attempted.

Sailor-gee, shop	101	Driller, shop	202
Shearer	101	Electrician, ship	202
Sheet-metal worker, shop	101	Electrician, shop	202
Shipfitter	101	Flange turner	202
Tool maker	101	Famby chipper	202
Janitor	101	Gas cutter and burner	202
Storekeeper	105	Hammer runner	202
Chairman	108	Heat treater, blacksmith	202
Cherrywoman	108	Holder-on	202
Coal passer	108	Hydroblaster, foundry	202
Fremont's helper	108	Instrument assembler	202
Guard	108	Joliner, ship	202
Laborer, custodial	108	Joliner, shop	202
Clerk, substituted railway postal	107	Lay-out man	202
Oiler	107	Lay-out and marking	202
Baster	201	Lead burner, ship	202
Buttonhole mader, hand	201	Lead burner, shop	202
Cleaner, clothing worker	201	Leffmann	202
Cloth sponger	201	Melter, electric	202
Clothing examiner	201	Melter, fuel	202
Coat operator	201	Melter, gas	202
Coat sewing-machine operator	201	Methyl enier	202
Cutter	201	Officer worker	202
Cutter, assistant cookout	201	Ordinanceman	202
Cutter, cutout	201	Painter, ship	202
Cutter, hand cutout	201	Painter, shop	202
Cutting-machine operator	201	Patternmaker	202
Double-needle sewing-machine operator	201	Pipe coverer and insulator, ship	202
Marker (laundry)	201	Pipe coverer and laminator, shop	202
Patternmaker (clothing)	201	Pipe fitter, ship	202
Pocket binker, sewing-machine operator	201	Pipe fitter, shop	202
Press operator (clothing)	201	Planer-machine operator	202
Presser, hand	201	Press-cutting machine operator	202
Sewstress, hand	201	Pinch-machine operator	202
Spreader (clothing worker)	201	Puncher, sheet-metal shop	202
Textile inspector	201	Rivet beater	202
Trouser binker	201	Riveter	202
Trouser operator	201	Sailmaker, canvas worker	202
Trouser sewing-machine opera- tor	201	Sandblaster, ground duty	202
Anglersmith	202	Saw filer	202
Benchman	202	Shearer, sheet-metal, shop	202
Bench worker, hand, metal	202	Shearing-machine operator	202
Bentling-machine operator	202	Sheet-metal worker, bench	202
Bendling-roll operator	202	Shipfitter	202
Bollermaker	202	Shipwright	202
Bumpling-machine operator	202	Spot welder	202
Calker	202	Tool maker	202
	202	Upholsterer	202
	202	Bench assembler	203
	202	Block-press operator, explosive handler	203
	202	Box maker	203
	202	Classified laborer	203

PART V

POSITIONS SUITABLE FOR PERSONS WITH CHRONIC DISEASES

(Cardiac disease, tuberculosis (arrested or healed))

A. Cardiac.

The guiding principle in establishing disability codes relating to heart disease follows fairly closely the American Heart Association classifications. No attempt has been made to interpolate in the disability placement codes any consideration as to the type of heart disease.

Persons with a history of rheumatic heart disease should not be placed in positions in a damp environment or in an environment presenting sudden temperature changes.

Persons with cardiovascular syphilis are considered the least satisfactory of all the cardiac diseases from the standpoint of placement. The Commission's statistics indicate that this defect has a high incidence in the laboring classes and in most instances incapacitates to the extent where vocational training and placement are difficult and, in view of the guarded prognosis of the disease, often inadvisable.

Persons with a history of coronary disease, manifested by angina pectoris, coronary thrombosis, cardiac asthma, or paroxysmal dyspnea, are not justifiable risks for placement in Government industry. There are a small number of positions in Government industry where persons with hypertension or heart disease may be placed provided there is no history of decompensation.

Placement potentialities have been coded for a considerable number of machine-shop and drafting positions involving desk or bench duty. All positions which, on survey, disclosed that performance of the duties involve climbing ladders, frequent climbing of stairs, stooping, pushing, crawling, frequent lifting, or other types of arduous physical exertion, have not been given disability classification codes to include cardiac disability.

B. Tuberculosis.

The influence of occupation on the incidence and mortality of tuberculosis among wage earners has been the concern of industrial insurance companies and public health agencies for more than a generation. In no other type of physical defect does environment assume such an important role in placement considerations as it does in the case of ex-tuberculous individuals. Factors such as extreme changes in temperature and humidity have been considered insurmountable in the placement of persons with a history of tuberculosis, although these factors have not been proved to affect appreciably the incidence of the disease. Since dusts containing a high percentage of silica have been found to alter susceptibility to tuberculosis and also to have an adverse effect on persons with a history of tuberculosis, in designating placement codes, positions which have been reported to involve this hazard are not listed as offering placement potentialities for persons with a history of tuberculosis. Also positions in which employees would be exposed to fumes or gases have not been considered suitable for ex-tuberculous individuals.

Since fatigue is well recognized as being unfavorable to the welfare of ex-tuberculous individuals, those positions which were reported as involving strenuous physical activity, such as heavy carrying, lifting or pushing, constant stair or ladder climbing, and excessive walking or standing, were not coded as placement potentialities for ex-tuberculous persons.

Title of position Region and establish- ment	Title of position Region and establish- ment
Tailor, assistant	Electrician's apprentice
Tailor, dress-cloth maker	Electrician's helper
Tailor, hand, buttonholes worked	Hammer ringer
Technologist (junior and associate)	Helper, coppersmith
Textile examiner, female	Helper, electrical worker
Engraver	Inspector, ordnance
Junior assayer	Jobber
Medalist	Lay-out man, plate, machine shop
Selector (female)	Machinist, operator, drill press
Transfer engraver	Machinist, apprentice
Aircraft mechanic, junior and senior	Machinist, production and maintenance
Aircraft sheet-metal worker, junior	Master machinist
Aircraft-armament mechanic	Optical-glass grinder and polisher
Aircraft-engine mechanic, junior and senior	Optical-instrument assembler
Aircraft-propeller mechanic, junior	Optical-jeweler
Inspector, aircraft supplies	Ordinance worker, female, cartridge-case shop
Mobile machine repairman	Ordinance worker, female, optical shop
Cutter and dieer, quartz crystal	Ordinance worker, male and female, machine shop
Pusher, tester and holder, quartz crystals	Sew filer
Machinist, electrical	Screw tool maker and toolmaker
Operator, tractor	Sheet-metal worker
Orientator (quartz crystal)	Sheet-metal worker, apprentice
Repairman, instruments (and senior)	Welder
Repairman, office machines (all grades)	Ordnancemen, first, second, and third class
Repairman, radio	Chumfitter
Tester, capacitor	Plated-pink workman
Welder, armature (helper and junior helper)	Draughtsmen
Naval Inspector, engineering material, Crown Can Co., Philadelphia, Pa.	Gas-mech mecanbler
Naval Inspector, engineering material, E. J. Stukel Machine Co., Philadelphia, Pa.	Gasmask trustee
Naval Inspector, radio (all grades), R. G. A. Manufacturing Co., Camden, N. J.	Guard
Box maker	Inspector
Cartridge-case maker	Multigrapher, multigraphic and mimeograph machine operator
Cartridge-case maker, punch-press	Operator, gas-mask machine
Cartridge-case maker, turret-drill	Operator, tractor, light-duty
Coppersmith	Sewing-machine adjuster
Coppersmith's apprentice	Storekeeper
Electrical, oiler	Millman
Electrician, leadingman	Model maker
Electrician, quartermaster	Chumfitter
	Cranes operator, overlord
	Electricalmen
	Laboratory mechanite
	Laboratory mechanite, assistant
	Laboratory mechanite, junior
	Laboratory mechanite, under
	Machinist
	Parachute repairman
	Rib attacher
	Wireworker, aviation

ADDENDUM SENTENCES

GROUP ONE-PERIOD STATED CIVIL SERVICE POSITION

Anglesmith.

Boston Navy Yard, Boston, Mass.

It is the opinion of the master shipfitter, under whom this employee works, that employment is not essential for this work. The heating of the metal does not call for determination of subtle difference in the color of the metal; it is merely heated hot enough to soften and beat into shape.

Apprentice machinist.

Watertown Arsenal, Watertown, Mass.

This position requires the use of both upper extremities, but a one-legged individual might perform the duties of this position satisfactorily. Organic heart disease fully compensated does not present an undue risk. An employee with arrested tuberculosis is not at undue risk in this position.

Ashman, powerhouse.

Boston Navy Yard, Boston, Mass.

Duties are not particularly arduous and do not require any special qualifications.

Blacksmith.

Boston Navy Yard, Boston, Mass.

In general, this shop requires a man of unusual physical condition. Heat and noise are intense.

Boatbuilder.

Boston Navy Yard, Boston, Mass.

Moderate agility is required for most of the work, but there is some bench work which involves very little climbing.

Bellringer.

Bellringer, shop.

Boston Navy Yard, Boston, Mass.

Moderate hypertension is not a hazard for some of the duties, but it would be for others. Shop work demands no particular height-weight requirement; ship work demands agility and ability to work in small spaces.

Calker and clipper.

Boston Navy Yard, Boston, Mass.

The work can be done in the shop by a one-eyed man, but because of the hazard of flying metal chips, the compensation risk would have to be considered. For work on board ship two eyes are essential.

Cement finisher, building trades.

Boston Navy Yard, Boston, Mass.

This position involves ordinary unskilled labor.

Chimney-potter.

Boston Navy Yard, Boston, Mass.

In general, this shop requires a man of unusual physical condition. The heat and noise are intense.

Churner.

Post Office and Courthouse Building, Hopedale, Mass.

The duties of this position require two well-functioning hands, two good lower extremities, flexible body trunk (no arthritis of any segments), two well-functioning arms, and one good eye; hearing is not a factor. Organic heart disease whether or not compensated is disqualifying, but moderate hypertension under medical supervision is acceptable. Arrested tuberculosis is acceptable. Height and weight have no bearing on proper performance of these duties.

Charwoman.

Post Office and Courthouse Building, Boston, Mass.

This job requires two well functioning hands, two sturdy legs without rheumatic trouble, a body trunk readily flexible in all segments (arthritis disqualifying), two good arms, and one eye that is normal; hearing is relatively unimportant. Height-weight relationship is of no consequence. The environment suitable for healed tuberculosis. Moderate hypertension cases under medical supervision are acceptable. Organic heart disease of any character is disqualifying. Deafness is not disqualifying.

Charwoman, head.**Post Office and Courthouse Building, Boston, Mass.**

The duties of the head charwoman are to supervise the charwomen who work under her. In this building there are 65 charwomen who are under direct supervision of the head charwoman. Her duty is to instruct new charwomen and usually do the work when short of help. She must, therefore, have two well-functioning arms and hands. Two good legs, and a flexible body trunk in all segments are extremely important. She must have at least one good normal eye. While the charwomen themselves may be deaf, a deaf woman would not be satisfactory in the position of head charwoman. No agility is required, and the height-weight relationship is not important. Environmental factors are not important; therefore, persons with healed tuberculosis can very readily work on this job. Color vision is not essential nor is depth perception. Persons with arthritis in any segments of the vertebral trunk are not suitable. Severe hypertension renders the applicant a hazard to herself; organic heart disease is a contra indication for employment in this position.

Glider, substitute railway postman.**South Pacific Station, Boston, Mass.**

The job of substitute railway postal clerk is very exacting from the point of view of health, agility, stability, and general capability. This employee works in very close quarters on a railway car. He has to work rapidly in order to deliver the mail at the various train stops, and sort the mail in a very complex scheme while the train is in motion. He is required to be well-endowed with emotional instability or mental disease is not suitable for this job. This worker should have two good sturdy legs and have no circulatory trouble. Because of the excessive bending which is required in throwing mail in every direction into the bags and also arthritis of any segment of the back should be disqualifying. While color vision is not essential, good vision with or without glasses is required. Two good hands are necessary, and at least eight fingers. Total deafness is not acceptable, but deafness in one ear might be acceptable. Because of the presence of dust in the ear, the position is not suitable for persons with healed tuberculosis. High blood pressure or any type of organic heart disease are contra indications for employment. Because of the necessity of reaching high to insert the mail in the proper slots, the individual should be of average height. Obesity is undesirable, because the worker walks down narrow passageways in the car. Neurological disease is definitely not acceptable. In conclusion this is a most exacting job. Persons with hernia, goutitis, or ulcer should not be employed in this job.

Coal pusher.**Post Office and Courthouse Building, Boston, Mass.**

This job requires two well-functioning hands, two good legs, a flexible body trunk in all segments, two good arms, at least one good eye, controllable agility; good hearing is not a requirement. Because of the dust and gases generated in the basement of this building, the work is not suitable for persons with history of tuberculosis. Organic heart disease and hypertension of any kind are contra-indications for employment. One good eye is sufficient to perform duties. All chronic ailments of the respiratory system should be disqualifying. Persons with weakness of abdominal wall (hernia) not suitable for position.

Coppersmith, ship.**Coppermith shop.****Boston Navy Yard, Boston, Mass.**

Very few of the coppermiths are required to work aboard ship. Color vision is essential, since much of the work calls for heating copper to proper temperature which is determined by the shade of red to which the torch is heated.

Cranemaster.**Cranemaster shop.****Boston Navy Yard, Boston, Mass.**

Some of the cranes (shop) are approached only by entrance from a balcony requiring an great agility to reach the end. Others can be reached only by a ladder, with the obvious attendant difficulties. The former group can be handled by men with disability or amputation of one leg.

Dictaphone typist.**Boston Navy Yard, Boston, Mass.**

Persons with arrested tuberculosis or organic heart disease fully compensated are acceptable for this position. Carefully selected blind applicants are acceptable for this position.

Die sinker.**Boston Navy Yard, Boston, Mass.**

Work is arduous, not so much because of heavy duties, but because of the need for constant attention and alertness. Two eyes are desirable, but a well-tinted man with one eye could do the work. Eye hazard is considerable; goggles are essential.

Driller.**Boston Navy Yard, Boston, Mass.**

(See alphabetical sentence for Calker and chipper.)

Electrician, ship.**Boston Navy Yard, Boston, Mass.**

The position of ship electrician, as with all ship trades, is much more arduous than shop or ordinary electrical work. Work is done in very close quarters where there are many cables, pipes, hoses, etc. Considerable climbing is done during course of an average day.

Electrician, shop.**Boston Navy Yard, Boston, Mass.**

Many of the duties of a shop electrician can be performed by persons with considerable physical disability.

Fitter, powerhouse.**Boston Navy Yard, Boston, Mass.**

Duties are not particularly arduous and do not require any special qualifications.

Fireman's helper.**Post Office and Courthouse Building, Boston, Mass.**

The fireman's helper works in an atmosphere of extreme heat and dust. Persons with untreated tuberculosis or any type of lung pathology not recommended for this position. Employee must be able to carry coal to the boiler. The sense of hearing and sense of vision should be intact because of the necessity of observing atom pressure and the state of his fire. A bell rings to indicate a certain pressure has been reached, so that good hearing is important. Good vision (with or without correction) is necessary. Persons with elevated blood pressure or organic heart disease, whether or not compensated, not suitable. Position requires two good arms, two good legs, (arthritis of the spine in any segment is not acceptable). Because of the required bending in every direction, a hernia would be aggravated. Color vision is not essential. Since this employee is required to be agile, persons should be proportionate in weight and height.

Flange turner.**Boston Navy Yard, Boston, Mass.**

(See alphabetical sentence under Anglesmith.)

Forger, drop.**Boston Navy Yard, Boston, Mass.**

In general this shop requires a man of unusual physical condition. Heat and noise are intense.

Forger, heavy.**Forger, light.****Boston Navy Yard, Boston, Mass.**

(See alphabetical sentence under Forger, drop.)

Foundry chipper.¹**Foundry molder.****Foundry molder.²****Boston Navy Yard, Boston, Mass.**

All foundry positions in this establishment are very arduous and working conditions unpleasant. Only persons in excellent physical condition should be permitted to work in this shop.

This occupation definitely rules out placement possibilities for ex-tuberculosis patients because of the dust (sand) and fumes of molten metal.

Frame bender.**Boston Navy Yard, Boston, Mass.**

(See alphabetical sentence under Anglesmith.)

Furnaceman.**Boston Navy Yard, Boston, Mass.**

Furnaceman may at times have less arduous duties, but in general this shop requires a man of unusual physical condition. Heat and noise are intense.

¹Foundry chipper does not a quite normal color vision, other foundry positions do.

²Foundry molder: These workers must possess good near and distant vision, as they must be able to see the appropriate ladlemen. For the same reason hearing must be normal.

Gas cutter and burner, ship.**Gas cutter and burner, ship.**

Boston Navy Yard, Boston, Mass.

Welders in the Boston Navy Yard are scattered throughout the yard. Many of them work in the shops, many on the ships. The physical requirements vary with the location of the job. In the boiler shop or in the construction shop, the position is stationary, requiring very little mobility in performance of duties. On the ships, agility and the ability to work in small spaces are essential.

General helper, building trades.

Boston Navy Yard, Boston, Mass.

This position involves ordinary unskilled labor.

Guard.

Post Office and Courthouse Building, Boston, Mass.

The guard's duties not only involve those of watching, but occasionally those of laborer or elevator operator. The guard is armed. Two well-functioning arm and hand are necessary for this position, well as two sturdy legs, without any circulatory defect which would interfere with the body trunk should be flexible in all its movements because of the bending that is required. An individual with one normal eye may be employed in this job. Hearing should be good enough for ordinary conversation. Because of the necessity of walking through narrow passageways, it is necessary that the employee be agile. A person with healed tuberculosis and compensated organic heart disease could be employed in this job. Moderate hypertension under medical supervision is acceptable. Color vision and depth perception not important.

Hammer thrower.

Boston Navy Yard, Boston, Mass.

(See addendum reference under Fireman.)

Janitor.

Army Ordnance, Boston, Mass.

The duties of this position can be performed by a person with good hearing in only one ear. Persons with arrested tuberculosis or organic heart disease, fully compensated, are acceptable. Thoroughly selected blind applicants are acceptable for this position.

Joiner.

Boston Navy Yard, Boston, Mass.

The joiner at the Boston Navy Yard is a shop cabinet maker. The work is not arduous, but the shop conditions are rather hazardous.

Laborer.

Boston Navy Yard, Boston, Mass.

This position involves ordinary unskilled laborer duties.

Laborer, custodial.

Post Office and Courthouse Building, Boston, Mass.

The duties of laborer in custodial service require two good arms and two well-functioning hands, two normal legs, and a flexible body trunk throughout. This position requires normal vision in both eyes, correction permitted. While the ability to hear ordinary conversation is desirable, it is not absolutely essential. Emphatic must have considerable agility and be proportionate in weight and height. The cardiovascular system should be normal. Healed tuberculosis not contra indication to employment.

Loftsooman.

Boston Navy Yard, Boston, Mass.

Oscillate heart disease constitutes a risk only in that the loft is reached by climbing a very long flight of stairs.

While the actual duties of this position are not excessively arduous, most of the work is done on the floor, requiring that the worker spend much time on his hands and knees. A weak back or any weakness of the hinder would interfere with the proper performance of the duties. A bad, wobbly knee in the left may result in a very costly error in the other sheep; hence alertness is essential.

Machinist, inside.

Boston Navy Yard, Boston, Mass.

The inside machinist or tool maker may be seriously handicapped physically, yet able to do a satisfactory day's work at his machine. As long as the worker is able to stand at his lathe for the required length of time, other considerations are not important. While it is desirable to have acute hearing, it is not essential.

Millman.

Boston Navy Yard, Boston, Mass.

Some of the work could be done by a one-legged individual. Most of the work in this shop is done by large power-driven machines; the duty of the millman is to feed the machines. The detection of a straining load depends on the ability to note a change in the pitch of the sound as the saw goes through the piece of wood.

Other.

South Peabody Station, Boston, Mass.

The job of oiler requires two well-functioning hands and arms, though a person with two missing fingers could satisfactorily perform the job. Two sturdy normal legs without circulatory defects and a flexible body trunk in all four segments required. Good near and far vision in both eyes are necessary, but hearing is not important. The work requires a person to be of average height and weight. The employee should be agile. Work is in an atmosphere of dust and grease and at high elevation, and the individual should have a normal cardiovascular and respiratory system.

Other, powerhouse.

Boston Navy Yard, Boston, Mass.

(See also under engineer under Armament, powerhouse.)

Operator, elevator.

Post Office and Courthouse Building, Boston, Mass.

Operation of elevator requires one normal upper extremity (including arm and hand) two legs that are normal without circulatory defects and a body trunk with a normal cervical spine. Mild arthritic in the other segments of the vertebral column is acceptable. Ability to hear ordinary conversation is necessary. The job requires average height to operate the elevator. A person with normal cardiovascular apparatus is recommended, but arrested tuberculosis is not an absolute disqualification. Prolonged standing is required in this position.

Operator, elevator, chief.

Post Office and Courthouse Building, Boston, Mass.

The position of chief elevator operator requires all of the facilities indicated under elevator operator, plus agility in getting around to supervise about 20 elevator operators working at the same time. In the case of the chief elevator operator, normal hearing and normal vision are of paramount importance.

Operator, telephone.

Post Office and Courthouse Building, Boston, Mass.

The position of telephone operator requires good vision and good hearing. In connection with vision, the telephone operator is required to distinguish blue colors. Ten fingers are preferable, and two arms are necessary. Since this job is largely walking and carrying vision of the lower extremities or loss of one leg are unacceptable. Arrested tuberculosis and compensated organic heart disease are not contraindications for employment. Moderate hypertension under medical supervision is acceptable. Persons with emotional instability (psychoneurosis) are not suitable for this position.

Operator, telephone, chief.

Post Office and Courthouse Building, Boston, Mass.

The chief telephone operator is required often to fill in for an absent telephone operator and should therefore be able to perform duties of the telephone operator, in addition to the function of general supervision. The chief telephone operator is required to walk about frequently from one telephone operator to another which requires satisfactory function of lower extremities in addition to those physical requirements required for the telephone operator.

Ordnanceman.

Navy Ammunition Depot, Hingham, Mass.

Duties vary considerably. Some of work is very light and could be done by crippled; other jobs are more arduous. Vision and hearing should be fairly good, not so much because of the need in the work, but because of the hazard due to explosives.

Petrolman.

Watertown Arsenal, Watertown, Mass.

This position involves duties requiring a high standard of physical fitness.

Puncher.

Boston Navy Yard, Boston, Mass.

On some machines persons with one leg could work as efficiently as persons with two.

Rigger.

Boston Navy Yard, Boston, Mass.

This position requires excellent physical condition.

Rigger.

Watertown Arsenal, Watertown, Mass.

This position involves duties requiring a high standard of physical fitness.

Rope maker.

Boston Navy Yard, Boston, Mass.

For the most part, this position involves watching machinery which do all the work except the feeding of fresh material. There is a moderately large hazard as a result of many rapidly moving machines. While it may be possible for a person to do the work, he might be more of a hazard than a person with two eyes.

Sailmaker, ship.**Sailmaker, ship.**

Boston Navy Yard, Boston, Mass.

Shop duties are very light and require no special physical ability. Shop duties require the usual agility, etc., to do the necessary climbing and working about the ship.

Shearer.

Boston Navy Yard, Boston, Mass.

(See addendum sentence under Puncher.)

Sheet-metal worker, Building Trades.

Boston Navy Yard, Boston, Mass.

As in many other navy yard positions, the shop duties are different from the ship duties, and require different physical standards. The shop sheet metal workers do relatively light work, usually at a bench. The ship workers must be agile.

Shipfitter.

Boston Navy Yard, Boston, Mass.

Duties vary considerably. The minimum requirements for one group of workers are different from those of another group.

Storekeeper.

Port of Embarkation, Boston, Mass.

The duties of this position can be performed by a person with moderate hypertension and organic heart disease fully compensated. Arrested tuberclosis would not render the employee unable to live off. Apparently, however, should have fully functioning extremities for the duties of storekeeper in this establishment.

Storekeeper.

Watertown Arsenal, Watertown, Mass.

The duties of this position could be performed by an employee deaf in one ear or blind in one eye. A one-armed or one-legged employee could perform the duties of this position. Persons with organic heart disease fully compensated would be acceptable.

Tool maker.

Boston Navy Yard, Boston, Mass.

A tool maker may be seriously handicapped physically, yet able to do a satisfactory day's work at his machine. As long as the worker is able to stand at his machine for the required length of time, other considerations are not important. While it is desirable to haveiente hearing, it is not essential.

Trackman, Building Trades.

Boston Navy Yard, Boston, Mass.

This position involves ordinary unskilled labor.

Water tender, powerhouse.

Boston Navy Yard, Boston, Mass.

The duties are not particularly arduous and do not require any special qualifications.

Wood carver.

Boston Navy Yard, Boston, Mass.

A wood carver works from a staging. The work is burdensome requiring good physical condition.

SECOND UNITED STATES SERVICE REGION

Aircraft electrician (engineering) place.
Rome Air Depot, Rome, N. Y.

The installation of connections and accessories in the planes require excellent physical fitness. Employees must be able to climb ladders, work in awkward positions, be free of organic heart disease, active or arrested tuberculosis and hypertension; one normal functioning upper extremity, and well functioning lower extremities (may have amputations of the toes, or amputation of one foot) are acceptable.

Aircraft electrician (engineering) shop.
Rome Air Depot, Rome, N. Y.

Electrical repair section: The employees of the electrical section repair and test electrical accessories such as generators, magnetos, starters, etc. This type of work is performed at benches.

Aircraft sheet-metal worker (shop).
Rome Air Port, Rome, N. Y.

This type of work entails a great deal of bending, squatting, and climbing ladders. Physical fitness requirements are excessively high.

Aircraft sheet-metal worker (shop).
Rome Air Depot, Rome, N. Y.

Work in the sheet-metal shop of the engineering division does not involve arduous exertion. The duties are performed at benches, machines, or around plane parts (wings, etc.). The employees who are assigned to the latter are the only ones who squat and work in awkward positions.

Aircraft-instrument mechanic.
Rome Air Depot, Rome, N. Y.

The duties of this position include the repair and testing of flight and navigation instruments such as "gyro" instruments, altitude, speed and rate of climb indicators, electrical panel instruments, and optical instruments. The work is performed at benches, entails the use of small tools, and requires excellent hand vision.

Airplane duster (engineering).
Rome Air Depot, Rome, N. Y.

This employee sprays lacquer over the fabric which has been fitted over a wing or any other part of the plane. Strips of tape are placed over the stitching holding the cloth in place and then sprayed. Lacquering is carried on in front of two large ventilators which draw away the fumes of the solvent.

Airplane mechanic, engine (engineering).
Rome Air Depot, Rome, N. Y.

This employee repairs and adjusts parts of the motor directly on the plane. This position involves climbing up a ladder and working in awkward positions with hand tools.

Airplane mechanic, general (engineering).
Rome Air Depot, Rome, N. Y.

The duties of this position are performed directly on the plane and involve repair and installation of all parts of the craft. This type of work requires agility, well-proportioned physique, and ability to assume awkward positions.

Airplane-engine repairman (engineering).
Rome Air Depot, Rome, N. Y.

The duties of this position are performed in the engine repair shop where the motors are completely disassembled, cleaned, and inspected; cylinders are honed and ground; valves ground; and all parts reassembled. Most of this work is arduous since it involves the lifting of motor parts. Handapped persons could be utilized for lifting of small parts and painting the exterior of the cylinders.

Airplane-hydraulic mechanic (engineering).
Rome Air Depot, Rome, N. Y.

The duties of this position are performed at a bench. Employees may stand or sit. The individual parts (hydraulic units, such as brake mechanism, pumps, fuel system, etc.) which range in weight from 5 to 20 pounds, are repaired, and are then tested at special machines for leaks.

Airplane-propeller mechanic (engineering).
Rome Air Depot, Rome, N. Y.

The propeller section of the engineering division employs both men and women. One special operation, the balancing of the propeller at a stand,

is performed in a special room by a worker who files the edge of a blade if necessary. One group of workers glues sheets of rubber to the propeller blades (blade protection), while others disassemble the entire propeller, inspect the parts for wear, replace the necessary items, lubricate, and reassemble the entire mechanism. The duties are not arduous. A person with compensated organic heart disease is capable of performing the duties involved in the balancing of propellers. All duties are within the shop.

Anglesmith,

New York Navy Yard, Brooklyn, N. Y.

The duties of an anglesmith consist of forming angles on metal by marking the part to be bent and placing it on the bed of the machine which is operated by a hand lever that releases a bar. The activity varies with the size of the pieces to be angulated.

Atturator,

Signal Corps Photographic Center, New York, N. Y.

Duties consist of making drawings that differ slightly from each other. This work is performed sitting. Color vision is not necessary.

Apprentice, mechanical trades,

Penthruy Arsenal, Dover, N. J.

The apprentices in the mechanical trades work at machines usually found in a machine shop - lathes, screw machines, milling machines, clamps, drill presses, and grinding machines. They conduct their work from blue prints, use micrometers and gages. Activity is moderate and may be performed by women.

A one-legged person, with or without crutch or orthopedic appliance may perform the duties efficiently. Although a one-eyed individual is able to perform the involved tasks, there is danger of metal chips entering the good eye.

Apprentices are taught to operate all types of machines; they also attend lectures during the entire period of 4 years.

Arbit, sealer,

Signal Corps Photographic Center, New York, N. Y.

This employee paints scenes for a "set" or prepares miniature sets. All work is performed sitting. The activity is light.

Automotive-body mechanic (transport service),

Rome Air Depot, Rome, N. Y.

The worker removes dents from the bodies of bodies of cars and trucks by using special hand tools which are held applied the dent while hammer blows are delivered on the opposite side of the metal. After this process, the area is smoothed with a hand sanding machine. These activities involve no vigorous exertion.

Automobile mechanic helper,

New York Port of Embarkation, New York, N. Y.

This employee repairs trucks used by the motor highway division. The duties consist of overhauling engines and other parts of the truck such as the clutch, transmission, etc. Duties may be performed by persons with one intact hand and partially useful opposite hand, one good leg and amputation below the knee of the opposite lower extremity. Women are capable of handling this type of work provided the lifting of heavy objects from truck to truck is done by a helper.

Automobile mechanic, junior,

New York Port of Embarkation, New York, N. Y.

(See advertisement centered for Automobile mechanic helper.)

Baster,

Naval Clothing Depot, New York, N. Y.

This is light work and consists of applying basting to coats and attaching it in place by hand. Men do this work in sitting or standing positions.

Bench assembler,

Penthruy Arsenal, Dover, N. J.

Bench assemblers are employed in assembly of the various small parts of detonators, percussion fuses. The work is light, repetitive, requires manual dexterity, and is performed at a bench in a sitting position. Duties may be performed by one-legged and one-eyed persons.

Bengham,

New York Navy Yard, Brooklyn, N. Y.

The duties of bengham vary considerably from shop to shop. The types of work performed are assembly of instruments, grinding, punching, marking, filing, soldering, inspection, cleaning of parts, optical work, etc. In general

the activities involved are not arduous. One-eyed, one-legged, hard-of-hearing persons are suited for this type of work, as are older employees and those with moderate hypertension. In the optional shop, arrested tuberculosis is unacceptable.

Bench worker, hand, metal.

New York Navy Yard, Brooklyn, N. Y.

Bench workers perform their duties sitting most of the time while filing and assembling.

Blacksmith and forger.

New York Navy Yard, Brooklyn, N. Y.

The work in these shops is very arduous. The environment is very warm; there is dust present and fumature produced by the heated metal.

The blacksmith handles objects by hand. The forger feeds and manipulates the hot steel in a mechanical hammer machine (drop forge).

Hazards consist of burns (burns sustained as result of falling steel products) and foreign bodies in the eyes.

Although navy yard work requires fairly good distinct vision and fairly good hearing, these attributes are not essential to this trade.

Blacksmith (utilized).

Rome Air Dep't, Rome, N. Y.

The duties of this position involve the heating of metal and hammering it into desired shape by hand or power hammer. The work is arduous.

Blacksmith welder.

General Post Office, New York, N. Y.

This employee operates electrical and gas welding equipment, and performs blacksmith work related to nobility under the jurisdiction of the Maintenance Unit. Duties are performed in a shop.

Block-pieces operator (explosive handler).

Plantingy Arsenal, Dover, N. J.

This operator loads a hydraulic press with the incinerated nitrocellulose and starts the machine which compresses the material into blocks that weigh from 60 to 75 pounds. The blocks are carried by the operator in the "concentric press" (cone press) for the next operation. The macaroni-like strands are then blocked (final) for further processing.

The work is arduous, repetitive, and is not suitable for women. Environment contains ether fumes.

Boatholder.

New York Navy Yard, Brooklyn, N. Y.

This work is arduous. Men work in various awkward positions, using arm and legs continuously in climbing, bending, and walking. A person with one good eye would be able to do this work satisfactorily. Loss of the bad eye would not impair efficiency.

The chief hazards are inhalation of dust, minor cuts, and falling boards.

This work could be performed by a strong woman.

Boilermaker.

New York Navy Yard, Brooklyn, N. Y.

The work done in all parts of the boiler shop is arduous. The employees are subjected to constant fumes of smoke. Most of the duties are performed in standing position.

Women can do welding, lay-out, and bench-work operations in this shop.

The shop encompasses numerous types of different operations which require men with varying physical abilities. It is in a large building which is dusty and hazardous; there are many heavy machines in the shop.

Box maker.

Plantingy Arsenal, Dover, N. J.

The box maker manufactures wooden cases used for holding completed shells. The employee handles long pieces of lumber, cuts them into desired sizes at a band saw, measures the individual pieces; using hammer, screw driver, and chisel in the process.

Work is arduous and performed in standing position.

The environment is dusty and noisy. Rugged women can do this work.

Box maker, wood (depot supply).

Rome Air Dep't, Rome, N. Y.

The duties of this position consist of cutting lumber to the required sizes (from sketches) by means of a motor-driven saw, and nailing the pieces together to form boxes which are used for shipping supplies to subdepots. The work is moderately arduous.

Brakeman.

New York Navy Yard, Brooklyn, N. Y.

The brakeman couples freight cars and disengages cars by removing a large metal pin. The coupling weighs about 50 to 60 pounds; he must swing it onto a freight car many times during the day. He climbs up ladders and walks between freight cars. Normal color vision is not required.

Bulldozer operator (utility).

Rome Air Depot, Rome, N. Y.

This employee operates a tractor provided with a large blade that levels the earth on the road.

Bulkhead maker.

Naval Clothing Depot, New York, N. Y.

This work is performed by women who sew around the edges of button-holes by hand. Good near vision is required, as well as manual dexterity. This type of activity is light.

Cabinetmaker.

General Post Office, New York, N. Y.

The duties of this position involve the repair of furniture. Activities include the operation of power-driven saws, planers, and drill presses. A cabinet-maker may be required to perform general carpentry.

Carver.

New York Navy Yard, Brooklyn, N. Y.

(See addendum sentence for Chipper.)

Cameraman.

Signal Corps Photographic Center, New York, N. Y.

The duties of this position require excellent binocular vision (including keen color perception) and good mental coordination. Activities range from light to moderate, involving a great deal of standing, walking, and bending. Adjustments of the cameras are made by turning various wheels. Some cameras require hand power to "run" the film. A person with an amputated lower extremity below the knee (with satisfactory prosthesis) would perform the duties.

Cameraman, animotor.

Signal Corps Photographic Center, New York, N. Y.

This employee photographs the individual drawings prepared by the animators, numbers them in consecutive order, and later photographs them with a motion camera. He adjusts the distance of the camera from the drawings by moving wheels. Distances from light to moderate (during adjustment of camera).

Captain, tugboat.

New York Port of Embarkation, New York, N. Y.

The duties of this position involve steering the boat, keeping watch on all sides for other boats, signaling the engineer for control of speed and direction of motion (forward or backward). A captain requires excellent distant vision, fair near vision, good hearing, two normal extremities, and one intact hand (the other may be lacking the last two fingers). Activities are not arduous.

Carpenter.

Rome Air Depot, Rome, N. Y.

The duties of this position consist of repair of woodwork in all parts of the depot. The work is arduous and requires agility, inasmuch as assignments vary from day to day.

Carpenter.

General Post Office, New York, N. Y.

Duties consist of repairing woodwork of truck bodies. Activities involve the use of hand tools (hammer, chisel, plane, etc.) and operation of machines (band and circular saws, planer, mortise). During transportation, he climbs on trucks and examines all woodwork for defects.

Carpenter.

New York Port of Embarkation, New York, N. Y.

These employees make flat-top boxes, deck life boxes, and other wooden equipment. They must be capable of operating various types of machines usually found in a carpenter shop (planers, slotters, band saws) and of using hand tools (hammer, plane, saw, drill, chisel, etc.). Work is performed in the shop and also on board ship (repairs).

Carpenter, shop.

Signal Corps Photographic Center, New York, N. Y.

This employee uses hand tools (hammer, chisel, etc.) and operates various woodworking machines (hand saw, planer) to construct objects needed on the "minie" sets, from drawings or sketches. Duties are performed within the shop and require moderate exertion.

Carpenter, studio.

Signal Corps Photographic Center, New York, N. Y.

This employee builds scaffolds, floors, and platforms. He is required to work high above the floor in setting up supports for lights. Duties are arduous.

Carpenter and carpenter's helper, general mechanic.

General Post Office, New York, N. Y.

The duties of these positions include the repair of woodwork other than furniture. Duties are arduous and require the operation of power-driven saws, planers, and drill presses.

Carrier, city.

General Post Office, New York, N. Y.

Each carrier separates the mail that has been "sorted" for his zone by a clerk, into the individual offices, buildings, apartments, houses, and arranges the mail properly in his bag. The letter, filled, weighs approximately 50 pounds. A carrier delivers mail each day regardless of weather conditions. Varicose veins, hernia, heart disease (whether or not compensated), arrested tuberculosis, bad feet, and deformities or defects of the lower extremities that interfere with walking should be cause for rejection. Carriers are required to delay light traffic for pick-up of mail from letter boxes, to deposit mail and packages in storage boxes, and to deliver parcels.

Catcher (foundry).

New York Port of Embarkation, New York, N. Y.

The catcher receives the ironed articles at the opposite end of the ironing apparatus. The duties are light.

Charwoman.

General Post Office, New York, N. Y.

The duties of this position are moderate and consist in cleaning furniture, sweeping and mopping floors, welding low glassware, polishing brass and nickel, and related work. This employee works five hours daily.

Charwoman, head.

General Post Office, New York, N. Y.

Employee supervises and inspects the work of all charwomen assigned to a building. She does not engage in manual activities.

Chiffonier (transport service).

Rome Air Depot, Rome, N. Y.

The duties and physical requirements are similar to those of a truck driver. This position calls for light exertion.

Checker (warehouse).

New York Port of Embarkation, New York, N. Y.

This employee checks the quantity and type of materials received or shipped against a copy of the written order. Duties are light but occasionally involve moving of boxes. The duties are performed while standing, involve some bending, and may expose the worker to dampness and cold. The environmental humidity, persons who are blind in one eye, or who have had one leg amputated (compensated by satisfactory prosthetic) or whose vision or hearing is impaired, but have one intact hand and grasping power in the other hand, may serve as checkers.

Checker, shipping (foundry).

New York Port of Embarkation, New York, N. Y.

The shipping checker reconciles the original contents according to the list compiled by the receiving checker.

Chief, records.

General Post Office, New York, N. Y.

Employee supervises the clerical force and is responsible for all truck records. Duties are light.

Chief, supply.

General Post Office, New York, N. Y.

Employee supervises the work of the stock clerk, and is responsible for all records of incoming and outgoing materials. He may assist in issuing supplies.

Chopper.

New York Navy Yard, Brooklyn, N. Y.

This employee operates a pneumatic machine and works in various awkward positions, using arms and legs continuously in climbing, bending, and walking. A person with one good eye would be able to do this work satisfactorily. Loss of his two fingers would not impair efficiency.

The chief occupational hazard is eventual disturbance of hearing. In many of these employees, audiometric tests would most likely disclose defective hearing; however, they work satisfactorily in a noisy, cluttered environment at the navy yard.

On ship these employees work in close quarters, near riveters and are exposed to fumes of the hot metal. Deafness would be unaged here, as the worker would be free of the nerve-wracking noise, but at this navy yard, there is the hazard of not hearing approaching machinery.

Clothesline (Imidry).

New York Port of Embarkation, New York, N. Y.

This employee sorts the soiled garments after they have been checked and marked. Activities are moderate and may be performed sitting or standing. Cleaner, clothing worker.

Navy Clothing Depot, New York, N. Y.

Women perform this work, cutting or scissoring. Duties consist of cutting and pulling threads from the garment after the sewing operations are completed. Physical exertion is light.

Environment is good; there is only slight amount of dust present.

Cleaner, windows.

General Post Office, New York, N. Y.

This is a hazardous occupation which requires full physical fitness. The employee climbs on window sills and balances himself while cleaning the glass. He must and fear high elevations.

Clerk, assistant.

General Post Office, New York, N. Y.

Employee performs the usual clerical duties such as filing, sorting correspondence, etc.

Clerk, chief and junior, stock.

General Post Office, New York, N. Y.

Stock clerk handles light and heavy hardware, parts, parts of controlling machines, electrical equipment, and conveyor parts. They crate and unpack packages and issue materials on written requests. Duties are arduous (some parts weight 25 pounds).

Clerk, general.

General Post Office, New York, N. Y.

In one portion of the post office several clerks are assigned to the induction and changing of rates of hand stamps which are used in various parts of the post office. This type of work is very light and requires fairly good manual dexterity.

Clerk, general, typist and stenographer.

General Post Office, New York, N. Y.

The administrative force of the superintendent of the motor vehicle service is composed of clerks who perform only general duties (review and filing of records), others who also type and others who take dictation. Those who check truck reports operate adding machines. Duties are sedentary.

Clerk, information.

Signal Corps Photographic Center, New York, N. Y.

Employee sits at a desk, answers the telephone, writes messages, gives passes, and directs visitors to the desired offices. Women are being utilized for these duties. The activities are light.

Clerk, junior and chief.

General Post Office, New York, N. Y.

Clerk maintains personnel records, reports from foremen, supply records, etc. Duties are sedentary.

Clerk, loading-platform.

General Post Office, New York, N. Y.

Clerks working on the loading and unloading platforms may be assigned to weighing trucks and recording figures of same. Others may keep records of incoming and outgoing mail trucks. They may also assist in pushing hand

trucks. The environment of the loading and unloading platform is damp and dusty. These activities necessitate good physical fitness (no leg or arm disabilities) because no clerks are required to handle heavy sacks.

Clerk, general-poc.

General Post Office, New York, N. Y.

Parcels-pool clerks handle writing, weighing, lifting of packages, and throwing into boxes. These functions vary from light to moderate.

Clerk, record-searching.

General Post Office, New York, N. Y.

Some clerks are assigned to record sending of money orders while others verify the numbers marked on the money order books.

Clerk, shipping.

Saint Cooper Photographic Center, New York, N. Y.

Employees check outgoing items, wrap them and pack them in cardboard boxes. The work involves light to moderate exertion.

Clerk, shipping (depot-supply).

Ramse Air Depot, Roslyn, N. Y.

The duties of this position include the packing of articles in cardboard and wooden boxes, and marking such containers by applying ink over stencils. Women are already doing this type of work. The duties involve moderate exertion.

Clerk, sorting mail.

General Post Office, New York, N. Y.

Major portion of the sorted mail is engaged in sorting mail and parcels. Various sorting schemes are utilized to separate mail into various categories. The smaller sections may be operated sitting, but more elaborate systems require the clerk to stand. While this particular type of work is not arduous, it necessitates a constant use of the upper extremities and the eyes. The latter are particularly strained as a result of reading addresses. The advent of "V-Mail" increased the visual burden of clerks who participate in the sorting mail. Position is not suitable for arrested tuberculous cases because of the dusty atmosphere. In general, clerks who work at complicated sorting agencies must have excellent mechanical and mental stability.

Clerk, sorting parcel post.

General Post Office, New York, N. Y.

Separation of parcel post in sections. Immovable on the loaded sleds are dumped on a long table along which a conveyor moves in front of the clerks. Individual packages are scrutinized for address and tossed into bags opening which are located at distance of 5 to 10 feet. Position not suitable for employees with arrested tuberculous, because of the dusty atmosphere.

Clerk, speedier.

General Post Office, New York, N. Y.

Clerk may have an special task to perform other than clerical duties as outlined in the description of duties of clerk, or he may supervise the work of a staff of men. Under pressing conditions he may assist in manual work (transportation required on the loading platform). Duties are light to moderate.

Clerk, stamp.

General Post Office, New York, N. Y.

Clerk merely stamps labels attached to bundles destined for the various States. This light work is done sitting.

Clerk, stock (property挺物の事務).

General Post Office, New York, N. Y.

At the time of this survey there was no stock clerk position. One of the employees working in the adjacent shop was assigned to issue materials as the general area. The duties of stock clerk consist in handling mechanical parts (screws, bolts, wire, etc.) and cleaning materials (oils, powder, rags, brooms, paper, etc.). Activities include climbing of short ladders, pulling heavy drawers, and heavy lifting.

Clerk, stock, custodial.

General Post Office, New York, N. Y.

This employee issues materials on written request. He handles parts ranging in weight from light to heavy, climbs on racks and ladders, and pushes hand trucks. Barrels of oil must be tilted and rolled into proper storage places.

Clerk, storeroom, garage supplies.

Rome Air Depot, Rome, N. Y.

This employee issues automotive parts, accessories, and tools to mechanics, on written order. He keeps a complete stock of such supplies, being responsible for their proper classification in orderly compartments. This type of work requires light to moderate exertion.

Clerk, window.

General Post Office, New York, N. Y.

A clerk may work in a "cage" or small room where he performs special unit duties: (a) postage due unit (b) special delivery unit (c) customs unit (d) registry (e) money orders (f) stamps, envelopes, and cards (g) sale of bonds, defense stamps, and postal saving stamps. These functions are light and may be performed sitting or standing. Physical requirements are not rigid for these operations.

Cloth sponger.

Naval Clothing Depot, New York, N. Y.

This type of work is moderately active. The men stand at their task and walk around the manglees that move the cloth. The environment is warm and saturated with steam. The temperature remains fairly constant.

Coal passer.

General Post Office, New York, N. Y.

Employee is found only in one of the main buildings under the jurisdiction of the General Post Office. Other large buildings do not generate their own steam. Duties consist of loading coal by hand from a coal pile to a car and carrying it to the furnace for further handling by the furnanceman.

Conk operator.

Naval Clothing Depot, New York, N. Y.

This work is done by male operators of power-driven sawing-machines. They saw together the various parts of coats, using heavy material. The activity is moderately uniform, as the material must be swung around after each sawing operation. Excellent near vision is required. This work could be done by strong women with excellent muscular development of the arms.

Conductor.

New York Navy Yard, Brooklyn, N. Y.

In order to prevent possible accident resulting from sudden disability of the engineman, the conductor, who is taught to operate the controls, rides in the cab.

Copper tender.

New York Navy Yard, Brooklyn, N. Y.

Duties consist of standing on a platform about 4 feet off the ground, watching the melting of the metal, drawing off the slag and directing the pouring of the molten metal. Tender uses a long metal bar to stir the molten mass. The work is arduous; worker is exposed to dust, fumes, heat, and noise. Splashing metal presents hazard of burns to the body and the eyes. Tender stands up to his post and stands by the furnace all day. Work is not suitable for women.

Custodian, assistant.

General Post Office, New York, N. Y.

Employee supervises a force of 100 to 300 persons and is responsible for the maintenance and operation of a large building which usually houses several Federal agencies. He performs administrative duties and also inspects the building. Duties of this position do not require more than light exertion. However, employee must be mentally stable and alert, capable of dealing with officials of the agencies in the building.

Custodian, property.

Signal Corps Photographic Center, New York, N. Y.

Employee is in charge of a room containing various articles needed on "mobile" sets. He selects the required items and bears them to the stage (laborer). Work entails moderate exertion.

Cutter.

Naval Clothing Depot, New York, N. Y.

Work consists of tracing an outline on cloth, then cutting the material by machine (for mass production) and by hand (for custom work). The work is performed in standing position. Activity is light.

Cutter, assistant custom.**Cutter, custom.**

Cutter, head cabinet.

Naval Clothing Depot, New York, N. Y.

Employee performs the duties of marking and cutting cloth for made-to-order garments in a standing position. Activity is light. Cloth is cut by hand.

Environment is good except for slight amounts of dust from cloth.

Deckhand (water transportation).

New York Port of Bartholomew, New York, N. Y.

This employee performs manual work on board tugboats. His duties consist in fastening brawlers and ropes to piles or tugs, cleaning decks, and watching for floating debris.

Diamond.

New York Navy Yard, Brooklyn, N. Y.

These workers may sit at the bench or stand at cutting machines. They consist of working with a nobel block of steel, outlining the desired shape on the planed surface, then making a specified impression in the metal by means of a machine that cuts away the metal to the desired depth and shape. The impression in the metal is finished by hand with files, chisels, etc. The completed product is a die that is used in a drop-forging machine, the hot metal being forced against the die until it assumes the shape of the die. The only heavy duty involved is the movement of the block of metal from machine to the bench; the finishing operations are light tasks requiring considerable skill. Small dies require from light to moderate activity. Depth perception is not absolutely necessary, because as the cutting operation is controlled and act by a master-die die. Women could perform these duties; heavy work could be moved by hand or with help.

Dispatcher.

General Post Office, New York, N. Y.

There are several employees in the dispatcher's office. One sits at a telephone switchboard and takes notes on calls from drivers (accidents, inability to attend to duties, breakdown of truck, etc.). Other dispatchers issue drivers' daily schedules and collect daily records. Duties involve typing.

Dispatcher, chief.

General Post Office, New York, N. Y.

Employee supervises a staff of dispatchers and arranges schedules. Duties are occasionally clerical.

Dispatcher, motor vehicle (transport service).

Rome Air Depot, Rome, N. Y.

A dispatcher is an clerk who receives telephone or written requests for transport service, and passes the orders to the drivers. He keeps a record of all incoming and outgoing vehicles on a blackboard. Duties are light.

Driver, old.**Driver, young.**

New York Navy Yard, Brooklyn, N. Y.

(See additional sentence for Operator, drill-press.)

Driver mechanic.

General Post Office, New York, N. Y.

Employee is a truck driver; he performs no repairs. He may assist in the loading and unloading of vehicles.

Dry-houseman (tetryl explosives).

Pleasant Avenue, Dover, N. J.

The function of this operator is to maintain a specified, constant temperature in drying tetryl after the crystallizing operation. The work requires the reading of heat-recording apparatus and adjustment of the amount of steam admitted to the blowers. The duties are light and they may be performed by women.

Editor, continuity.

Signal Corps Photographic Center, New York, N. Y.

Employee "runs" off the film, listens with earphones, and observes that the action follows the script. He sits at a table and manipulates a foot pedal and hand controls (using both hands). This type of work requires good hearing and vision (near and distant). Duties are light.

Editor, film.

Signal Corps Photographic Center, New York, N. Y.

Employee sits as he operates a hand-driven machine which "runs" the film from one roll to another. Film is scrutinized through a large lens and is passed over the hand to feel for defects. Defective parts are cut out with hand scissors. Duties are light.

Electrician and helper (mechanical unit).

General Post Office, New York, N. Y.

Electricians are responsible for the maintenance of the motors, switches, wiring, and control panels of equipment under the supervision of the mechanical unit. Duties involve a great deal of climbing and walking. Some activities are performed in the electrical shop. Environment is dusty and cool. Work is strenuous and hazardous.

Electrician and helper (property maintenance).

General Post Office, New York, N. Y.

Electricians repair all electrical equipment—switches, lighting fixtures, elevator motors, fans and whisks. He may perform his duties in the shop or elsewhere in the building. He must be able to climb ladders, use hand tools, cut pipe for conduits. Work is arduous and requires full physical fitness. An electrician's helper assists in the actual work.

Electrician, field.

Planting Arsenal, Droyer, N. J.

The field electrician strings wires between poles and buildings from main lines. This employee must be able to climb poles and ladders to repair lines in all kinds of weather. Work varies from moderate to arduous duties, depending on the particular assignment. Color vision is necessary to identify wires of various colors. Women could assist in ground work.

Electrician, lineman (utility).

Rome Air Depot, Rome, N. Y.

The duties of this position require excellent physical fitness. This employee's activities are for the most part performed outdoors, climbing poles and working above ground level, in all types of weather.

Electrician, maintenance.

Signal Corps Photographic Center, New York, N. Y.

Employee repairs electrical fixtures of various types (switches, plugs, switch boards, spot lights, etc.). He climbs truck ladders, the screw drivers, soldering iron, etc.). Spends most of his time in the electrical shop. Activities are moderate in degree.

Electrician, ship.

New York Navy Yard, Brooklyn, N. Y.

Color vision is necessary in wiring operations, as the different circuit wires are distinctly colored.

The installation of electrical equipment on board ship is arduous because in aid by hoists is lacking; several men must lift heavy parts.

Electrician, shop.

New York Navy Yard, Brooklyn, N. Y.

Color vision is necessary in wiring operations, as the different circuit wires are distinctly colored.

The amount of dust in the environment is apparently not great. An individual with headed or arrested tuberculosis would probably get along well in the shop as long as he handled the lighter duties. Duties involve fine soldering, use of light tool and reading of wiring diagrams. The greater part of the tasks done in the shop vary from light to moderate. Theaviest activity centers about the movement of large motor by means of hoists. The shop work is well suited for women, as the duties require delicate touch and only light exertion. One-legged persons could perform many of the operations.

Electrician, studio.

Signal Corps Photographic Center, New York, N. Y.

Employee moves heavy spotlights to desired positions on the floor and on high scaffolds and converts all lighting fixtures to a master switchboard which is operated by pushing small levers. Pulley and rope are used to hoist the lights to the framework high above the "monkey" set. Duties are arduous.

Electroplate (engineering department).

Rome Air Depot, Rome, N. Y.

The functions of this employee are: (1) To clean all objects in a tumbler machine with soap and water, or subject them to sandblasting to remove scale, prior to the electrolyzing process; (2) to hang the objects to be plated on a bar which extends across the vat, so that they dip in the cyanide solution, after which the proper electrodes are applied to the bar, and to the metal to be plated on the articles; (3) to adjust the controls to regulate the flow of electricity through the solution; (4) to rinse the plated articles.

These duties are not strenuous. At present, activities are limited to cadmium plating, but later other metals are to be used. The occupational hazards of this position are cyanide poisoning and cyanide irritation of the skin (usually results from a splash).

Elevator operator.

New York Port of Embarkation, New York, N. Y.

This employee is directly responsible for operating the elevators in a large warehouse, by remote control. The employee sits at a desk, receives telephone requests to move a certain elevator from one floor to another and carries out the orders by moving small levers and pressing buttons. The progress of the elevator is observed by the illumination of red and green lights situated on a panel. The duties require normal color vision and hearing. A person with one eye, or no legs, or with several fingers of one hand missing may perform the necessary duties.

Elevator master.

General Post Office, New York, N. Y.

Starts stairs in the lobby of the building and signals the operator of an elevator when he should ascend by calling the number of the elevator or pressing a button which activates a buzzer in the elevator. Employee also operates the elevator. Physical requirements are similar to those of elevator operator.

Engineer, inspection.

General Post Office, New York, N. Y.

There are two such engineers under the direct supervision of the property man. Duties consist of making inspection tour of individual buildings throughout the city to check on maintenance and operations. Work involves climbing of scaffolding and stairs, and traveling extensively. He may inspect the roof of a building and also descend into the boiler room during his tour.

Engines, marine (water transportation).

New York Port of Embarkation, New York, N. Y.

This employee is responsible for the maintenance and operation of the motors of the boat. The duties consist of checking the various gages, controlling the fuel supply, and handling the controls in accordance to signals (going) from the captain on the bridge. The duties of the position require four normal extremities, good hearing, well proportioned physique, and fair nose vision.

Engineer, sound.

Signal Corps Photographic Center, New York, N. Y.

Employee attends a complicated switchboard which connects with all the studios. He also analyzes sound "tracks." Duties require good near vision and good hearing.

Engineman and assistant.

General Post Office, New York, N. Y.

Engineman is a general mechanic familiar with and able to perform the duties of electrician, steam fitter, plumber, ventilation mechanic, and elevator operator. In the absence of the chief engineer he supervises the work of the various mechanics. During the evening and early morning "tours" he does the work of any of the above-mentioned mechanics. Work is arduous. Assistant engineer has limited knowledge of general maintenance work; his duties are manual.

Engineman, chief.

General Post Office, New York, N. Y.

Employee is in charge of the engineers and mechanics of various types in one of the largest buildings. He supervises and assists in repairs. All-around excellent physical fitness is necessary. Good hearing is necessary for the detection of grinding of valves and defects in motors. He must be able to climb in and out of small places in order to observe the progress of repairs.

Engineman, custodian, assistant.

General Post Office, New York, N. Y.

Administrative duties are similar to those of assistant custodian except that he has a smaller force and supervises the custodial work in smaller buildings. He must be mechanically inclined and able to perform manual work busily as he performs the duties of engineman when one is absent for illness or is on annual leave. He must be able to use all types of hand tools and climb stairs and ladders.

Engineman, Diesel locomotive.

New York Navy Yard, Brooklyn, N. Y.

An engineman may stand or sit at his controls. He manipulates several hand levers that control the motion of the locomotive. The work is not arduous. Environment is not warm, nor hot very noisy. Vision, hearing and distant must be good bilaterally. Women are suitable for this work.

Engineman Janitor.

General Post Office, New York, N. Y.

Employee does janitorial and repair work in small buildings which do not have an engineman. He must be physically fit to perform arduous duties.

Examiner, clothing.

Naval Clothing Depot, New York, N. Y.

This employee inspects finished garments for defects. The standard of work activity is light.

Extractor man.

New York Port of Embarkation, New York, N. Y.

This employee places the dripping garments (from the washing machine) into a machine which removes the water by centrifugal force. The garments are then removed and placed in a hand truck. The work is arduous.

Fabric worker, textile and clothing (engineering).

Rome Ale Depot, Rome, N. Y.

The duties performed in this section consist in lay-out, cutting, and sewing (by hand and machine) of fabric used for covering the wings and fuselage. Employee also repairs flying clothing and flying boats.

Fender (laundry).

New York Port of Embarkation, New York, N. Y.

A fender places the laundered article (usually "flatwork") into a "roller" ironing machine which consists of a series of paired cylinders (steam heated). The duties are light.

Firefighter (motor equipment).

New York Port of Embarkation, New York, N. Y.

This position requires a well-proportioned person with good vision and hearing, capable of performing arduous activities. The duties include driving the fire truck, setting up fire equipment, putting out fires, inspecting the grounds for fire hazards, and keeping the trucks and equipment in excellent condition. Such work exposes the employee to smoke, all types of weather, and hazardous surroundings. An employee with several fingers missing can perform all duties satisfactorily.

Fireman.

General Post Office, New York, N. Y.

Few buildings require the services of firemen because no electric heat is obtained from a private company via underground pipes. Firemen shovel coal into the furnace, observe readings of the meters, and clean around the boilers. Environment is hot and dusty. Duties are arduous.

Fireman laborer.

General Post Office, New York, N. Y.

Employee is a low-grade fireman who also does cleaning duties in the smaller buildings generating their own heat. Duties are arduous.

Flange Turner.

New York Navy Yard, Brooklyn, N. Y.

The flange turner operates a machine that forms a bend (flange) at the edge of a plate by the action of a power-driven hammer. The worker sets his plates on the bed of the press, clamps them in place and releases the hammer. The plate is manipulated until the flange is formed completely along the edge. He may set up dies to produce various angles. The work is heavy. Environment is noisy and dusty.

Flare-parachute assembler.

Picatinny Arsenal, Dover, N. J.

This worker, like the sprayer, does odd jobs in the maintenance division. At the time of the survey a group was hand-sewing the cloth parts and cords of small parachutes for planes. This particular activity is light and is performed sitting.

Foreman (mechanical unit).

General Post Office, New York, N. Y.

Employee (responsible to the foreman-in-charge) supervises all classes of workers in the mechanical unit. Only two buildings have foremen of this type.

Foreman of laborers.

General Post Office, New York, N. Y.

Employee supervises and inspects the work of the laborers and is directly responsible to the junior. He does not perform manual work.

Foreman, pneumatic tube.

General Post Office, New York, N. Y.

Employee supervises the work of the pneumatic tube operators, and does not perform manual tasks.

Foreman-in-charge (conveyor system).

General Post Office, New York, N. Y.

Employee is responsible for the maintenance of the conveyor systems, conducts inspections (which involve climbing ladders and walking long distances), and allocates repair to the millwright.

Foreman-in-charge (machinist unit).

General Post Office, New York, N. Y.

This position is found only in the four largest buildings under the jurisdiction of the General Post Office. Duties are supervisory and encompass the work performed in the various shops and on the conveyors.

Forger.

New York Navy Yard, Brooklyn, N. Y.

(See addendum sentence for Blacksmith and forger.)

Foundry clipper.

New York Navy Yard, Brooklyn, N. Y.

This operator uses a pneumatically driven apparatus with interchangeable end pieces that cuts away the rough edges on completed metallic molds. The work is arduous; it necessitates bending and squatting. Environment is dirty and noisy. Rugged women might be able to perform this work if they had resistance in moving the molds.

Frame bender.

New York Navy Yard, Brooklyn, N. Y.

This employee performs arduous duty by hand, possess two good legs and be able to move quickly. The work is done on a large, metal platform which presents many openings for pegs that are changed in position so that the red-hot metal may be bent to the desired shape. Several men form a team that move together rapidly in order that the metal may be manipulated before it cools. A sledge hammer is wielded by this employee.

Furnace tenders, foundry.

New York Navy Yard, Brooklyn, N. Y.

This type of work involves arduous duty, which consists of charging the ovens with coke and weighed amounts of metal (ferrous). The fuel is shoveled by hand. Worker stands at his post. Environment is warm, dusty, and exposes worker to excessive light.

Garnermann.

General Post Office, New York, N. Y.

Employee performs garage duties such as welding and lubricating of trucks.

Garnermann driver.

General Post Office, New York, N. Y.

Employee is required to perform garage duties (washing, lubricating trucks, maintenance of batteries) and to drive trucks when necessary.

Gas cutter and burner.

New York Navy Yard, Brooklyn, N. Y.

Work may be inside or outside of the shop. Workers use a radiograph machine and gas-cutting apparatus that burns through metal (acetylene and oxygen). They usually stand at their work and hold the apparatus with both hands, or the apparatus is operated mechanically on an automatic sliding mechanism.

Hazards are burns from hot metal, inhalation of irritating fumes, ophthalmia from light of torch.

Workers outside the shop are not subjected to fumes from the burning metal as much as the inside workers.

At some jobs a one-legged man, using satisfactory prosthesis, could perform this work. On large jobs where one must climb, a person with two good legs is required.

A person with one good eye who can follow a line with an acetylene torch would be satisfactory. Inasmuch as the work is flat and linear, depth perception is not essential. Color vision is necessary since the operator distinguishes by color.

General Tailor.

Naval Clothing Depot, New York, N. Y.

Worker makes entire garment himself by marking, cutting (hand and machine), sewing, basting, and pressing (hand and machine). He sits for some operations and stands for others. The work is light.

Guard.

General Post Office, New York, N. Y.

Guard patrols a specified area of the building for a scheduled period of days, weeks, or months; then is assigned to another post. All guards are required to work on different shifts in rotation. During the night "tour" guard inspects assigned floors (vestibules, platform lights, puncher switchboard, clock, stop signs etc.). Operation of elevators is often part of the duties of guard. All guards carry guns. They must be physically fit and mentally stable. An employee with untreated tuberculosis would be acceptable provided the disease was minimal.

Guard.

Rome Air Depot, Rome, N. Y.

A guard at the depot is expected to changing weather conditions. At the time of this survey guards were observed shoveling rubble and patrolling buildings in零度 weather. Physical fitness must be high, since such as these men must be ready for emergencies. A senior guard does not require as high a degree of physical fitness as his duties are more supervisory than physical.

Guard (patrolman).

Signal Corps Photographic Center, New York, N. Y.

Inside duties consist of sitting at a desk and checking passes of persons entering and leaving the building. Outside duties involve patrolling the grounds and guarding entrances and exits. Employees rotate at these activities. Work requires very little exertion, but guard must be capable of handling emergencies. Majority of the guards are World War Veterans. Guard, captain and lieutenant.

General Post Office, New York, N. Y.

Captain of guards supervises the activities of all guards. In addition to the administrative duties, he tours the building during the day to observe guards at their posts. He walks a great deal and uses the stairs frequently. Identification of guards is responsible for the staff of guards working during the night and morning shifts. He has the same duties as captain and replaces him during his absence.

Hammer runner.

New York Navy Yard, Brooklyn, N. Y.

This employee operates a long lever that starts the hammer of the drop forge to beat ingot the hot metal until it assumes the desired shape. The hammer runner stands at one side of the machine and protected by a metal shield while in turning the hot metal while the hammer is operating. Environment is noisy, dusty, warm. The operator is subjected to a great deal of vibration.

Handyman.

New York Port of Embarkation, New York, N. Y.

This employee makes boxes and crates, packs materials, runs lifts, does portly work and performs other miscellaneous duties that range from light to arduous work. Lack of, or disability of, the last two fingers of both hands, or amputation of the foot or finger below the knee (compensated by satisfactory prostheses) will not impair efficiency. Women are capable of performing most of the duties, except perhaps the heavy lifting.

Heat treater.

Rome Air Depot, Rome, N. Y.

This employee places metal objects after tools in an electrically heated furnace, by means of long-handled pincers. After the proper time is allowed to elapse the part is removed and plunged in oil or water. Duties are moderately arduous.

Heat treater, blacksmith.

New York Navy Yard, Brooklyn, N. Y.

This employee works in the machine shop, where the duties involve the lifting of large bars of metal, placing them in heating furnaces, regulating the heat, watching the pyrometers and other gauges, then removing the hot metal with tongs and allowing it to cool. The work is arduous. Environment is warm; there is glare from the furnaces; there is a great deal of noise from the blowers. Women are not suitable for this type of work.

Holder-on.

New York Navy Yard, Brooklyn, N. Y.

Work is arduous. A holder-on is part of a riveting team. All functioning extremities must be strong, and near vision must be good.

Chief hazard is in heat from a hot rivet. Like the riveter, chipper, and editor, he is subject to traumatic deafness.

Hydroblaster, foundry.

New York Navy Yard, Brooklyn, N. Y.

The hydroblaster performs the same duties as a sandblaster, but handles a hose carrying water under high pressure. Workers wear protective garments which include a respirator. Environment is damp.

Joker.

Plentyum Arsenal, Dover, N. J.

This title consists in tracing drawings with India ink by placing a blank sheet of paper over the original sketch, resting on a piece of light blue glass which is illuminated from behind. Work is sedentary.

Inspector, machine shop.

Plentyum Arsenal, Dover, N. J.

The inspector (machinist shop) is employed in the inspection shop, where he sits at a bench and examines small parts for burrs which are removed by light hand filing. The inspector measures parts with gauges, counts the parts and places them in boxes for delivery to the assembly section.

The work is light, but repetitive. A one-legged person or one-eyed person is capable of performing the duties of this position.

Instrument assembler.

New York Navy Yard, Brooklyn, N. Y.

This work involves the assembly of the gun-control boxes. Many small parts must be put together and lubricated. These employees must be able to use small tools. All work is done at the bench. Women are able to perform the duties (as evidenced by presence of 12 in the shop).

Junior (large building).

General Post Office, New York, N. Y.

Junior (large building) is in charge of the foreman of laborers. He performs administrative duties and conducts inspections to observe the work of the laborers. He does not engage in manual activities.

Junior (small building).

General Post Office, New York, N. Y.

Junior (small building) directly supervises the work of 8 to 14 laborers and performs manual work of a laborer. He must be able to perform arduous tasks.

Laborer, ship.**Laborer, shop.**

New York Navy Yard, Brooklyn, N. Y.

Work is performed on ships where the duties are more arduous, and also in the shops at benches. Considerable wood dust in environment.

Laborer (unclassified).

General Post Office, New York, N. Y.

Duties of this position include cleaning floors, walls, partitions, pipes, curtains, vacuum tanks, lockers, and "pigeon holes" of writing cabinets, waxing floors by machine, and moving furniture. Laborers are assigned to unclassified duty in rotation. Work is arduous; involves bending, climbing, and walking. Many laborers develop dermatitis of the hands from prolonged use of soap solution.

Laborer classified.

Plentyum Arsenal, Dover, N. J.

The title of classified laborer has presented some difficulty to the examining physicans, in cases where a physical defect or disease has been disclosed. In an effort to evaluate the fitness of the applicant in relation to the activities involved it is necessary to know the particular duties that must be performed. The term offers no such clue inasmuch as it covers a large group of diversified tasks. Some classified laborers are performing light duties.

Laborer classified, sprayer.

Plentyum Arsenal, Dover, N. J.

The duties of classified laborer, sprayer, vary according to the particular assignment. At the time of this survey a group was spraying the outer surfaces of shell cases to preserve the metal. The operation is carried out in a heated exhaust compartment. This particular activity is light.

These classified laborers do not perform the same type of work for long periods of time. When the assignment is completed they may have entirely different tasks.

Laborer, face.

General Post Office, New York, N. Y.

Employee removes mail from hampers, "faces" it, and places it on trays.

Laborer, hand-trucker.

General Post Office, New York, N. Y.

Employee pushes loaded hand trucks from one part of the building to another. Removes loaded sacks from motor trucks to the loading platform, then piles them on hand-trucks which are pushed into the elevator to appropriate site of a particular floor where the sacks are opened, dumped on a table. Mail is then separated into different classes, dumped into hampers, and pushed to other tables which feed the classifying machines.

Laborer, mail-bag-emptyer and sorter.

General Post Office, New York, N. Y.

Employee empties full sacks on tables, "breaks" them in pieces, and places them in separate hampers. Work is dusty and heavy. Employee empties loaded sacks on table and tosses bundles of mail into appropriately marked boxes which are tied, placed on hand trucks, and pushed to tables where mail is sorted.

Laborer, mail-bag-packer.

General Post Office, New York, N. Y.

Laborer handles "verifying" pouches. After the pouches have been properly inspected, they are placed in a bag (weighing 65 lbs.). The bags are piled into heaps.

Laborer, moulder.

New York Port of Embarkation, New York, N. Y.

This employee performs miscellaneous arduous jobs such as ditch digging, road building, loading and unloading, porter work, etc.

Laborer, verifier.

General Post Office, New York, N. Y.

Laborer "verifies" mail sacks and pouches by placing the mouth of the empty bag close to an electric light and inspecting the interior for mail. This particular activity is light and may be performed by persons who have defects of the lower and upper extremities. Environment of the bag room is very dusty.

Farrier, foundry.

New York Navy Yard, Brooklyn, N. Y.

This type of work requires strong legs and arms, good distant and near vision and ability to move quickly. The environment and hazards are the same as those related to molders, except that these workers include more fumes than molders. The danger of the bucket "slipping over" and spilling hot metal is great.

The environment is dusty (sand), and the fumes from hot metals are irritating to the respiratory tract.

Lampist.

General Post Office, New York, N. Y.

Lampist washes and sheets lenses and reflects; renders "polish"; makes minor electrical repairs on switches and outlets. He assists the electrician in repairing electrical appliances. Duties are moderate in nature.

Layout man (sheet-metal).

New York Port of Embarkation, New York, N. Y.

(See welder under for high-melting operator (sheet-metal).)

Layout and marking.

New York Navy Yard, Brooklyn, N. Y.

The shop is in a large building which is noisy, dusty, and the environment is hazardous when there are many pieces of heavy machinery dispersed throughout the floor.

Lead burner, ship.

Lead burner, shop.

New York Navy Yard, Brooklyn, N. Y.

The lead burner performs his duties in the shop or on board ship. This employee handles sheets of lead of varying thicknesses; bends them into desired shape by hand and mallet, then melts lead into the seams by means of a small burner (which uses a mixture of hydrogen and oxygen). The

individual assignments vary from fitting bags, medicine chests, to making tanks and lead pipes. Lead fitters may work on board ship in close quarters where exhaust ventilation would be used to prevent inhalation of lead fumes and lead dust.

Lander (laundry laborer).

New York Port of Embarkation, New York, N. Y.

A laundress places the soiled laundry garments into the washing machine. This work requires a great deal of bending and use of the arms.

Lander, film.

Signal Corps Photographic Center, New York, N. Y.

An employee spends part of his time in a dark room where he opens cans of film (prepared by private contractors) and inserts the roll in the camera's magazine. However, before this operation, he must thoroughly clean the interior of the magazine by means of an air hose to prevent particles of film from attaching themselves to the interior of the magazine and to prevent them from accumulating and scratching the new film. Officers-in-charge did not feel that the sense of touch alone is sufficient to guarantee a perfectly clean magazine. An employee also develops small portions of exposed film before sending it to private concerns; good vision is required in order to determine whether or not the exposure is sufficiently clear. There are only two film loaders at the Photographic Center.

Lander and unloader (warehouse loader).

New York Port of Embarkation, New York, N. Y.

These employees load and unload boxes, bags and barrels from and on to trucks, freight cars, and barges by hand. The duties are arduous and expose employees to all types of weather when working on the receiving and shipping platforms of the warehouse. An employee with impaired hearing or with several fingers missing can perform these duties.

Leibmann.

New York Navy Yard, Brooklyn, N. Y.

This is fairly light work. It requires working in kneeling position over the template being made of paper and light wood. Only light hammering is done. The work built flat, depth perception is not necessary. Hazards are very few and minor. Environment is good at the navy yard (plenty of light and air, very little dust or noise).

Machinist (automobile repair shop).

New York Port of Embarkation, New York, N. Y.

The employee performs the duties of the position in a special truck equipped with a lathe, drill press, grinder, bench, bench, and all types of tools for repairs of automobile parts. An employee with one partially disabled hand (amputation or deformity of the last two fingers) or with an imputited leg compensated by a orthopedic prosthesis is suitable for this work.

Machinist (engineering department).

Rome Air Depot, Rome, N. Y.

The machine shop contains the following machines: Shop milling and shaping machines; engine, bench, and turret lathes; drill presses. All work is performed standing; it is not arduous, and may be performed by persons with amputations or disabilities of one leg, one partially defective hand, impaired hearing, compensated heart disease, well-supported hernia, and moderate hypertension.

Machinist (mechanic).

Pleasant Atwood, Dover, N. J.

A maintenance machinist in the operations division uses the lathe, drill press, grinder, milling, nosecone, shaper, and hand tools to repair or replace parts of equipment used at the plant. The duties are performed while standing. Each assignment is an individual task that is handled entirely by one machinist. Mass production is not part of the activities of this position. Activity varies according to the particular task at hand, but is usually moderate.

Machinist (mechanic).

Signal Corps Photographic Center, New York, N. Y.

Employee operates lathes, milling machines, drill presses, grinding machines, and handles micrometers and calipers. Activities of the position involve light to moderate exertion.

Machinist (motor machine shop).

New York Port of Embarkation, New York, N. Y.

The employee in this shop operates lathes, drill presses, milling machines, shapers, grinders, and may perform brush duties, depending on the type of repair work.

Machinist.

General Post Office, New York, N. Y.

Duties of this position involve the operation of a lathe, milling machine, drill press, grinder, and the use of micrometers, calipers, and scales. The work is performed standing and is not arduous.
Machinist, turning-lathe.

General Post Office, New York, N. Y.

Employee operates a machine that bores main bearings which support crankshafts. After that operation he "band laps" the bearing by applying prussian blue, fitting bearing and shaft together, then scraping "high spots". He uses hand tools and micrometers. Duties are arduous.

Machinist, cylinder grinder.

General Post Office, New York, N. Y.

Employee places the cylinder block on the grinding machine by means of a hand crane, then proceeds to smooth each cylinder. The activities of this position require the use of hand tools (wrenches, hammers, etc.), and instruments (inside and outside micrometers). Duties are arduous.

Machinist, general.

General Post Office, New York, N. Y.

Employee operates any of the machines in the machine shop and includes lathe, milling machine, shearer, grinder, drill press, vise press, and valve grinder. He manipulates many types and sizes of hand tools and instruments (calipers, micrometers, height gauges, etc.). Duties vary from light to arduous (lifting complete wheel with brake easing from floor to lathe).

Machinist, millwright and assistant.

General Post Office, New York, N. Y.

Employee inspects all parts of the conveyor system (bearings, shafts, etc.) and replaces worn parts. Duties involve the use of hand tools. Work is arduous and hazardous. Several of these men perform machine shop activities. Environment is dusty and cold. Assistant millwright aids the millwright in maintenance of the conveyor system and must have the same physical fitness.

Marble polisher.

General Post Office, New York, N. Y.

Employee cleans, polishes and makes minor repairs to marble floors, marble wallcovering, tables, rails, counters, marble columns, pilasters, and related work. Only the main buildings have marble polishers. Balconies usually perform the same duties in smaller establishments. Duties are not arduous. Materials used for polishing may produce dermatitis.

Marker.

Naval Clothing Depot, New York, N. Y.

(See addendum sentence for Cutter.)

Marker (laundry).

New York Port of Embarkation, New York, N. Y.

This employee stamps unmarked articles by inserting one end of the letter into a small marking machine that is set to imprint the desired identification code. Activities are light.

Miner (tumbler).

Rome Air Depot, Rome, N. Y.

This employee works with concrete, brick, and stone. The work is arduous.

Matron.

General Post Office, New York, N. Y.

Duties of this position consist in cleaning and maintaining women's toilets, rest rooms, and eat room.

Mechanic and helper, canelling machine.

General Post Office, New York, N. Y.

Duties of this position involve the maintenance of the canelling machines. Minor repairs are performed at the side of the machine, while major repairs are performed in the repair shop. Mechanic attends at his work and uses hand tools. Work is light. Frequently he is sent to a station that does not have a mechanic of this type.

Mechanic and helper, elevator.

General Post Office, New York, N. Y.

Duties of this position necessitate the performance of repair work on the upper end of an elevator or on the under surface, in a pit. Employee uses hand tools, climbs into small spaces and works many floors above the street level. Good hearing is necessary to detect grinding of gears, cables, and guide rails.

Mechanic and helper, letter-box.

General Post Office, New York, N. Y.

Employee repairs all types of letter boxes, performs sheet metal work; uses drills and hand tools, paints by means of spray gun, applies stencil work. He also inspects and repairs the mail chutes of all office buildings under the jurisdiction of the General Post Office. Duties vary from light to moderate.

Mechanic and principal, electric door.

General Post Office, New York, N. Y.

Mechanic is responsible for the repair and maintenance of electrically operated doors in postage. He climbs ladders, uses hand tools, and lifts heavy parts. Duties are arduous. The principal mechanic performs supervisory as well as manual functions.

Mechanic assembler, motor.

General Post Office, New York, N. Y.

Mechanic receives the individual parts of a motor after they have been repaired or cleaned and assembles them on an engine stand. The exterior surface is then painted. Motor runs for several hours for final test. Work involves the use of numerous types of hand tools. Duties are arduous.

Mechanic, chief.

General Post Office, New York, N. Y.

Employee is in charge of the mechanical force. He has technical and administrative function and actively takes part in manual tasks. Duties are not arduous.

Mechanic, clock.

General Post Office, New York, N. Y.

Mechanic repairs all clocks in the General Post Office. He works at a bench and uses small hand tools. Duties are light.

Mechanic, general.

General Post Office, New York, N. Y.

Mechanic removes worn or defective parts and replaces the latter with new or repaired units. Some mechanics disassemble the motor, others adjust brakes, etc., but all must be familiar with every mechanical part of the truck. Duties are arduous and involve bending, lying on the floor, and squatting. Mechanic must be able to drive the truck.

Mechanic, general (property management).

General Post Office, New York, N. Y.

Employee is a full-around maintenance man who does cleaning, repairing of various types, painting, and carpentry. There are only a few such persons in the custodial service of the General Post Office.

Mechanic, power helper (mechanical unit).

General Post Office, New York, N. Y.

Duties include lifting, pushing, cleaning, and washing in repair of the equipment under supervision (see superintendent, mechanical unit). Employee climbs ladders, creeps under low conveyors, and breaks up "blocks" caused by packages or packages. Work is arduous and hazardous. Environment is dirty and cool. Employee may be sent to any station in Manhattan and the Bronx to repair machinery; he often assists the millwright, electrician, or carpenter.

Mechanic, general, millwright.

General Post Office, New York, N. Y.

Employee assists the millwright in his activities. He is in a grade between general mechanic's helper and millwright. Physical fitness factors of this position are similar to those of millwright.

Mechanic, ignition.

General Post Office, New York, N. Y.

Duties involve the repair and testing of generators, starters and distributor heads. All parts are cleaned with lacquer. Duties are performed standing. Numerous types of hand tools are used. Duties are not arduous.

Mechanic, principal, elevator.

General Post Office, New York, N. Y.

Employee supervises the activities of the elevator mechanics and helpers. He must be physically fit to join his crew on or under the elevator, and often assists in the manual work.

Mechanic, scale.

General Post Office, New York, N. Y.

Employee repairs scales of all sizes. Duties vary from light to moderate.

Mechanic, overholt, overhauling.

General Post Office, New York, N. Y.

Mechanic removes all parts of the truck that require repair, and replaces new or repaired units (wheels, radiators, engine, steering gear, etc.). Duties are arduous and require a great deal of bending, squatting, reaching, and lifting.

Mechanic, typewriter.

General Post Office, New York, N. Y.

Employee is responsible for the repair of typewriters in the General Post Office. His activities are light. Work necessitates excellent manual dexterity and good near vision.

Mechanic, ventilating.

General Post Office, New York, N. Y.

Mechanic regulates the ventilating system to provide the proper temperature and moisture in the building; he makes repairs of any part of the equipment (this includes sheet metal work). Duties are arduous and necessitate the frequent climbing of ladders.

Mechanic-in-charge.

General Post Office, New York, N. Y.

Six employees of this type are employed in the General Post Office. Each employee supervises the various mechanics in each section of the mechanical division (overhaul, triannual inspection, and service department). Duties are supervisory and technical but may involve manual operations.

Mechanical time-fuse operator.

Pentagon Arsenal, Dover, N. J.

(See addendum sentence for Operator, explosive.)

Melter, electric.**Melter, fuel.****Melter, gas.**

New York Navy Yard, Brooklyn, N. Y.

The duties of a melter consist of loading the furnace with various metals, regulating the heat, and directing the pouring of the metal. The work is arduous and hazardous. Normal coke vision is not necessary in operating electric and gas furnaces, since pyrometers are used to gauge the time of pouring; however, a melter operating a fuel furnace must be able to judge the changing colors of the flame. There is great danger of burns from spashing metal.

Millman.

New York Navy Yard, Brooklyn, N. Y.

A millman does heavy work in a dusty, fairly noisy environment. Rough logs of varying lengths and diameters are unloaded from trucks and freight cars and are cut with hand saws and then planed on a large machine. A team of men usually manipulate the timber by means of large tongs that are attached to an overhead-operated hoist. Several of these men may be from one to four fingers without impairment of efficiency.

Milwright.

Pentagon Arsenal, Dover, N. J.

The designation is used at the arsenal. It denotes an employee who can act as welder, blacksmith, machinist, or sheet metal worker. As the term is customarily used it signifies one who operates shafts, pulleys, and machinery. The work is arduous and varies according to the particular assignment. Women may perform some of the duties (welding and sheet-metal work).

Mixer operator (explosive binder).

Pentagon Arsenal, Dover, N. J.

The duties consist of lifting and dumping heavy containers of nitrocellulose into chutes in which the nitrocellulose is mixed with certain chemicals. At the end of a fixed time the material is loaded into cans. The loaded cans weigh 125 pounds. This work is arduous. Environment contains ether vapors. One operator may attend to several machines.

Molder, foundry.

New York Navy Yard, Brooklyn, N. Y.

Worker is subjected to noise of furnaces; light and heat of furnaces; fumes of molten metals; hot sand; dust from sand; and temperature changes.

The work is arduous, requires prolonged bending and constant use of the hands and arms. These workers must be able to see the molten metal being brought to them from a distance, and must also be able to see their own work while it is hot. Hearing must be normal, otherwise accidents will

occur when the man carrying the bucket of liquid metal shant when running to the places where the molten are situated. Hazards consist of burns from hot metal, scalding, "brass shucks" (sublimation of fumes from brass, producing rills, fever, perspiration, pains in joints).

Motor-truck driver (heavy and light).

Rome Air Depot, Rome, N. Y.

The drivers do not load and unload the trucks. The activities involve moderate exertion.

Munition handler.

Hopkinton Arsenal, Dover, N. J.

This work involves the lifting of completed shells into small trucks, which are pushed to designated places for storage or shipment of the shells (trucks or freight trains). The employee must be strong, have good legs and arms, normal vision.

Naval Inspector, cables, Armstrong & Goldsmith Co.

Office of Inspector of Naval Material, New York, N. Y.

This company manufactures ship bidders, ship fenders, and handling craft cables. Inspector assigned to this plant observes company employees conducting tensile tests of cables, wire cables, and rope. He examines all completed units for proper welding, suitable twist, stitching, fastening of hardware, length of bidders, number and size of wire used in production cables, and in general observes the various operations in the shop. All work that has passed inspection is stamped or tagged. Work requires bending and climbing one flight of stairs and entails moderate exertion.

Naval Inspector, cables, Western Electric Co., Kearny, N. J.

Office of Inspector of Naval Material, New York, N. Y.

Inspector checks the process of wire winding and wire covering from beginning to end. All cables are tested for resistance, insulation and continuity by means of electrical instruments. Employee stands or walks throughout the day. Environment is warm, dusty and contains fumes (pitch, lead).

Naval Inspector, castings, International Nickel Co.

Office of Inspector of Naval Material, Bayonne, N. J.

This company manufactures castings of pumps, water propellers, pump liners, high pressure fittings, etc., and welding electrodes. Castings are examined for cracks, and imperfections; work involves bending. Inside and outside measurements are checked carefully. Inspector inspects the company employees in setting up materials for physical tests, and witnesses all readings. Welding electrodes are inspected for surface flaws, measured for uniformity of thickness of coating and for diameter. Duties involve light to moderate exertion.

Naval Inspector, gears, Morey Machine Co.

Office of Inspector of Naval Material, New York, N. Y.

This company produces complete gun mechanisms. All component parts (gears, shafts, etc.) are checked before final assembly. Finished unit is then inspected and stamped. Inspector uses inside and outside micrometers, calipers, depth gages, and other measuring devices. Work is light and may be performed sitting or standing.

Naval Inspector, gun mounts, Neptune Meter Co.

Office of Inspector of Naval Material, New York, N. Y.

This company produces castings of gun mounts. The inspector examines each unit for weak spots and cracks. He frequently uses a cold nibsel and hammer to chip the metal in order to ascertain the depth of an external flaw. Work involves the turning of the casting and requires moderate exertion.

Naval Inspector, instruments, electrical, Longine Wittner Co.

Office of Inspector of Naval Material, New York, N. Y.

This plant manufactures an instrument for taking soundings on board ship. Inspector assigned to this company checks the completed instruments for mechanical defects (readability of dials, motion of limbs, movement of the apparatus on its axis, and general workmanship). Work is light and is performed sitting.

Naval Inspector, ordnance, Ulsted & Martin Co.

Office of Inspector of Naval Material, New York, N. Y.

This company manufactures gunner's quadrants, torpedo directors, and gun control boxes. Inspector is required to use micrometers; rules, height, pitch and angle gauges; shadowgraph; microscope; Johnson block gages. Work necessitates keen near vision, and excellent manual dexterity. Duties are light and are performed sitting.

Naval inspector, quartz crystals, Western Electric Co., Kearny, N. J.
Office of Inspector of Naval Material, New York, N. Y.

After the quartz crystals have been ground, they must be calibrated at a large electrical panel by manipulating switches, turning dials and constantly watching meter readings. Work is light; is performed standing.

Naval Inspector, radio (supervisor).

Office of Inspector of Naval Material, New York, N. Y.

Employee is under the direct control of the supervisor of radio inspection. He is in charge of several plants within a radius of 30 miles of New York City and travels daily from the central office to the c plants. This necessitates a great deal of walking, climbing, sitting and traveling on buses and trains. He may actually do spot inspection in the plant. Work is administrative and involves very little physical exertion.

Naval inspector, radio, Emerson Radio Corp., New York, N. Y.

Office of Inspector of Naval Material, New York, N. Y.

This company manufactures pocket radio receivers and radio direction finders for the Navy. One small group of inspectors checks these instruments during various stages of assembly; each set is examined for mechanical defects and tested electrically by means of special meters; these employees are not required to move from door to door. An employee (who may have moderately severe impairment of vision) gives the completed pocket set a vibration test by placing it on a motor-driven platform. During the test he wears headphones and speaks into a microphone. This phase of inspection may be performed by an intellectually blind person, but nothing is found required to perform other duties and does not have to walk very far from his bench to gather sets for testing.

Direction finders are inspected at various stages of assembly by mechanical and electrical tests conducted by means of complicated instruments having dials, switches, and meters. The inspector wears head phones to help in the performance of the set during vibration tests. All work is light and may be performed in a sitting position.

Naval Inspector, radio, Link Radio Corp., New York, N. Y.

Office of Inspector of Naval Material, New York, N. Y.

This company manufactures transmitters and receivers. Duties involve the inspection of sets for mechanical defects (this includes the testing of earphones, telephone and loudspeakers and a electrical testing by means of vacuum meters). The work is light for the great part, but sets, weighing approximately 30 pounds, are moved from a work bench to a testing shelf, a distance of 6 feet.

Naval Inspector, radio, Radio Corp., Harrison, N. J.

Office of Inspector of Naval Material, New York, N. Y.

This company manufactures all types of metal tubes ranging in size from 1 inch to 2 feet. Small tubes are examined at a bench, while large tubes are checked on the floor (this requires a great deal of bending). All tubes are inspected for mechanical defects (such as the glass shell, welding of wires, prongs, etc.). The lateral structures of small tubes are extremely fine and minute; radio. To tolerate or reduce the latter all employees are rotated periodically from one type of inspection to another. These inspectors do not conduct electrical tests; they merely observe the readings of meters (company employees handle electrical parts). Inspectors are sent from Harrison to the company's warehouse in Jersey City to check the packing and shipping of the tubes. All employee rotate between these two plants. All duties are light.

Naval Inspector, radio, Radiomarines Corp., New York, N. Y.

Office of Inspector of Naval Material, New York, N. Y.

This company manufactures marine radio equipment. All sets are checked for mechanical defects at end stage of assembly is completed. In order to examine large sets the inspector must climb on the bench and bend over to note all internal parts. Electrical testing involves the reading of meters, turning of dials, coupling switches, and recording of data; these activities are performed sitting at the bench. Duties are light. The more physically fit employees inspect the larger sets.

Naval Inspector, radio, Telephones Corp., New York, N. Y.

Office of Inspector of Naval Material, New York, N. Y.

This company manufactures intercommunication telephone systems for Navy bombers. Some inspectors check cables, junction boxes, headphones, microphones, control sets, and various apparatus. All these parts must be

examined visually for mechanical defects (soldering, screw, nuts, threads, contacts, plugs, jacks, microphone bottoms, wiring, cracks in rubber ear pieces) and tested electrically for continuity of circuits by connecting component parts to meters of various types. Microphones and phones are tested individually. Inspector talks with the former and listens with the latter. All dials and switches are checked. Work is light and may be performed sitting or standing. Employees do not stay at the same bench at all times, but move from one part of the plant to another as batches of parts are assembled for inspection and may have to go from one floor to another (stairs or elevators).

Naval Inspector, radio, Western Electric Co., Jersey City, N. J.

Office of Inspector of Naval Material, New York, N. Y.

This company manufactures transreceivers for phones. Inspectors are assigned to check materials as they are received by the company employees--activity may be located on one of several floors (employee may use elevators or stairs). Duties are light and consist in inspecting sets for mechanical defects (on the assembly line) and testing electrically by means of various types of meters; the latter involves the use of earphones. Employees sit at their work. Small tools are used during mechanical inspection (pliers, screwdriver). During the performance of various types of electrical tests done by company employees, the Naval inspector observes dial and meter readings. These duties could be performed by an employee with manipulation of one hand or disability of one knee.

Naval Inspector, radio condenser, Hanoverland Radio Corp., New York, N. Y.

Office of Inspector of Naval Material, New York, N. Y.

Employee works at bench and observes each radio condenser for mechanical defects (soldering, whirling, loose screws, quality of workmanship, insulation movement of plates and threads), then tests it electrically by connecting it to two special instruments that register its capacity by reading the meters. Work is light and does not require the employee to travel from floor to floor.

Naval Inspector, radio condenser, Western Electric Co., Keniry, N. J.

Office of Inspector of Naval Material, New York, N. Y.

These condensers vary in size from very small to large. Physical demands of the position depend in part upon the size of condenser being examined.

Naval Inspector, radio transformer, Western Electric Co., Keniry, N. J.

Office of Inspector of Naval Material, New York, N. Y.

Transformers weight from several pounds up to 30 pounds and must be inspected all along the assembly line (putting laminations together, winding, covering, insulating, and wiring terminals). Some of this work is moderately arduous and is performed standing; some is light and is from sitting.

Naval Inspector, receiver (tuner and junc) Hanoverland Radio Corp., New York, N. Y.

Office of Inspector of Naval Material, New York, N. Y.

Employee inspects each completed receiving set for mechanical defects by checking all fastenings, nuts, plugs, jacks, knobs, switches, screws; turns set over and observes soldering, connections, etc., and then tests it electrically by connecting it to a small generator and noting the response of the set by major readings. He also uses headphones and listens to quality of radio and voice reception. Work is performed in a screen enclosed room and involves light exertion. He does not lift or carry the set (60 pounds). Inspector does no other type of work, although he is familiar with duties of condenser inspection.

Naval Inspector, rubber, Manhattan Rubber Co.

Office of Inspector of Naval Material, Passaic, N. J.

This company manufactures various types and sizes of hose (air, steam, fuel, water) gaskets, protective covers for propeller shafts, lining for pipes and tanks (to protect against chemical action), matting, transmission belts, brake linings, molded parts, and abrasive wheels. All articles receive a visual surface inspection, measurements, and hydrostatic tests where indicated. Physical tests (tensile strength, etc.) are conducted by company employees, witnessed by Naval Inspector. Position involves prolonged standing, walking from one part of the plant to another, use of the arms and hands, use of near vision and use of hearing for the detection of snapping of threads of fabric of hose during hydrostatic pressure. Inspectors use rules, vernier calipers, plug gauges, and durometers (instrument for testing hardness).

Naval Inspector, rubber, United States Rubber Co.

Office of Inspector of Naval Material, Passaic, N. J.

Company manufactures water, oil, and gasoline lines for ships, airplanes, and shore installations; ranges up to 6 feet in diameter; matting. Inspectors travel from one department to another to examine completed lots. All duties require prolonged standing. Testing of hose includes a check for length, observation of hydrostatic tests; recording of results (expansion of hose and twist under specified pressure) and stamping of each hose. Hoses are measured and checked with tape prints. This type of work entails the use of compass, rules, and ping gauge. During the hydrostatic tests the inspector must be able to hear the breaking of the threads of the fabric in the hose. The environment is dusty, warm, and laden with fumes of egyptian incense and gasoline in some portions. Inspectors must observe results of hydrostatic tests in the laboratory. Hazards include tripping over hose lying on the floor, and bursting of a hose during hydrostatic tests (which happens occasionally).

Naval Inspector, special parts, Western Electric Co., Kearny, N. J.

Office of Inspector of Naval Material, New York, N. Y.

Jacks and plugs are tested for tension, squeezing, contacts, centering. Long speakers, telephones, earphones, and headphones are examined mechanically and tested electrically; these activities require good hearing and near vision (for reading meters).

Naval Inspector, switchboards, Western Electric Co., Kearny, N. J.

Office of Inspector of Naval Material, New York, N. Y.

All equipment parts are examined for mechanical defects, and wiring is checked. This requires normal color vision.

Naval Inspector, teletype apparatus, Western Electric Co., Kearny, N. J.

Office of Inspector of Naval Material, New York, N. Y.

All equipment parts are inspected along the assembly line, then final inspection is made.

Naval Inspector, telephone equipment, Western Electric Co., Kearny, N. J.

Office of Inspector of Naval Material, New York, N. Y.

This is a full panel which is the central telephone and telegraph unit of a ship. Inspector checks boards to check all parts carefully.

Naval Inspector, webbing, Bergen Point Iron Works.

Office of Inspector of Naval Material, Bayonne, N. J.

This concern manufactures webbing for exhaust systems of ships. Inspector checks the finished unit for measurements and weight and for quality of welding. In a large, open yard. The work is light. This inspector also conducts practical tests to ascertain which company webbers qualify for work on Navy orders.

Oiler.

General Post Office, New York, N. Y.

Duties consist in lubricating and cleaning motors, engines, elevators, and other mechanical and electrical equipment; assisting engine room employees in the care, maintenance and repair of mechanical and electrical equipment. Employee must be able to climb ladders and "squeeze" into narrow spaces. Duties are arduous.

Oiler, marine (water transportation).

New York Port of Embarkation, New York, N. Y.

The duties of this employee involve the oiling of engines, machinery, and other motors and assisting the engineer in repair work. An oiler must be able to climb stairs and enter small spaces. A person with one intact hand and amputation of the best two fingers on the other hand can serve in this capacity.

Operator, adding-machine.

General Post Office, New York, N. Y.

A large number of adding machines are in the money order division. These devices are operated by pressing buttons and firmly striking a long strip of metal on the machine with the palm of the hand. Work is light and performed sitting.

Operator, addressograph-machine.

New York Port of Embarkation, New York, N. Y.

The operator sits at the machine. He inserts a group of embossed plates in a grooved space, adjusts the operating surface for the size of the work to be done, sets the machine and sets the motor in motion by stepping on the appropriate foot pedal. Activity is light.

Operator, angle-machine (sheet-metal).

New York Port of Embarkation, New York, N. Y.

This employee requires metal lifeboats and makes metal sinks.

Operator, automatic-screw machine,

Pentney Arsenal, Dover, N. J.

The operator stands at the machine, checks dimensions by means of micrometer and gages. Work is light and repetitions. A one-legged person can perform this type of work. Environment is noisy. Women are already engaged in this task.

Operator, bending-machine,

New York Navy Yard, Brooklyn, N. Y.

Bending-machine operator inserts sheets of metal into a heavy machine and operates switches that bring powerful pressure against the metal. The fingers are held close to the moving part. The operator stands at the machine. His "timing" must be good; he must have normal near vision. This work requires excellent depth perception and eye muscle coordination.

Operator, bending-roll,

New York Navy Yard, Brooklyn, N. Y.

(See preceding sentence for bix-out-and-marking.)

Operator, canceling-machine,

General Post Office, New York, N. Y.

Mail is picked from the drops, "faced," separated into sizes and run into the canceling machine. A clerk may be stationed behind the letter drops or in other units operating canceling machines. Activity is light and may be performed by persons who have compensated heart disease, arrested tuberculosis, one leg, partial atrophy of the arms, amputation of several fingers of the hands, vision in one eye, and impaired hearing.

Operator, centerless-grinding machine,

New York Navy Yard, Brooklyn, N. Y.

The shop is in a large building which is noisy, dusty, and hazardous; there are many pieces of heavy machinery throughout the shop.

Operator, conveyor-machine,

General Post Office, New York, N. Y.

Clerk is assigned to duty cutting the twine which binds bundles of letters and placing the letters on conveyors. Work is light and may be performed by persons having limited physical illness (defects of the hands, amputation of a leg, compensated heart disease, arrested tuberculosis, impaired hearing, and impaired vision).

Operator, cutting-machine,

Navy Clothing Depot, New York, N. Y.

Work consists of standing at tables while pushing and guiding a machine with a rapidly revolving circular knife, along an indented outline through many thicknesses of cloth.

Environment is good so far as light and ventilation are concerned; dust from cloth is present in the air, but not in excessive amount.

Chief hazard is danger of finger cuts or amputations.

Operator, double-needle sewing-machine,

Navy Clothing Depot, New York, N. Y.

These operators are all women who sit at their work (except those who stand at bolt-cutting marking machines). The actual operation of the machine requires good near vision and excellent eye-hand-arm coordination. The hands and wrists are constantly moving as the cloth is fed into the machine. The machine itself is operated by the lateral pressure of the knee against a rubber-padded lever that raises the sewing attachment, so that the material may be placed under the needle; then the foot is pressed against a pedal that regulates the speed of the machine. Under the category of sewing-machine operators belong: (1) Double-needle operators; (2) transfer operators; (3) coat operators (two); (4) pocket makers.

The environment is extremely noisy. No visible dust is seen. There is a high-speed "tempo" in this type of work which probably places a psychical strain on these workers.

Operator, drill-press,

Pentney Arsenal, Dover, N. J.

These employees stand at their machines. The machines are operated by moving a long lever which raises or lowers the cutting tool. The work involves moderate activity, is repetitions, and may be performed by one-legged persons.

Operator, drill-press (sheet metal).

New York Port of Embarkation, New York, N. Y.

(See addendum sentence for Operator, single-torchine (sheet metal).)

Operator, drill-press ship.**Operator, drill-press shop.**

New York Navy Yard, Brooklyn, N. Y.

The work in the shop is less arduous than the outside work (on the ship) because there is more room, and opportunity to sit while the press is drilling (on certain jobs). Portable drill presses are used when working on the ship; these are heavy and must be supported by one man, while the other pushes the machine against the metal. Men who work on the ship must be able to work in small spaces.

Hazards are minor cuts, wounds of legs from long curling pieces of metal removed when worker is standing during the drilling process, and injuries from surrounding machinery.

A woman could operate the drill presses in the shop, but would have to be a very strong person to operate and carry portable press on board ship.

The men who work on board ship must have fairly good distant vision, as well as good near vision. The inside operators require excellent near vision, as they must be able to see the nozzle in the metal where the hole is to be drilled.

Operator, elevator.

General Post Office, New York, N. Y.

Employee operates passenger elevator but may also be required to run a freight elevator. Equipment varies with different models of elevators. Doors may be electrically or manually controlled. Some machines are provided with seats, others are not. Good eye-hand coordination plus mental stability are required. Normal color vision is necessary for proper performance of duties on some types of elevators but is not a requisite for operation of all types.

Operator, engine lathe.

New York Navy Yard, Brooklyn, N. Y.

An engine lathe operator constantly attends his work, watching the cutting of the lathe. He must have excellent near vision in order to read the gages and be also must have normal depth perception.

Operator, explosive lathe.

PhillyArsenal, Dover, N. J.

An explosive operator is a general term which includes one who performs any of the numerous, repetitive tasks related to loading and assembling fuzes, detonator primers, shells, bombs, etc. Duties require the welding and pouring explosives into the parts mentioned, compressing powder into pellets and performing operations to retain powder in place by crimping and applying foil and shellac. Women are almost exclusively engaged in these activities which are light, most of which are sedentary operations.

Operator, freight elevator.

General Post Office, New York, N. Y.

Employee operates a freight elevator, pushing hand truck in and out of the elevator at the landing, and may be required to do cleaning. He may be called upon to run the passenger elevator. Duties are arduous. Good grasping power in both hands is required.

Operator, grinding press (explosive handler).

PhillyArsenal, Dover, N. J.

This operator places a die at the bottom of the chamber than loads it with blocks of explosive material, starts the press, guides the tensile strands into the die, places containers at the end of the lathe and keeps the strands straight.

The loading of the press and the handling of the full containers is avulsing, hence men do this part of the operation. Women perform all the remaining duties.

Operator, hot-press (printer).

Signal Corps Photographic Center, New York, N. Y.

Employee who type in a heavy metal holder, carries the latter to a printing press. Press is electrically heated. At the proper time the material to be printed is placed in the machine, and a heavy handle is pulled with both hands. Work is arduous.

Operator, junior, miscellaneous (photostat operator).

New York Port of Embarkation, New York, N. Y.

This employee must excel as a photostat operator, but may be assigned the duties of a power trimmer when the amount of photostat work is low. The duties of the position include preparing the solutions and carrying boxes of chemicals. A photostat operator works on a raised platform (12 inches high) and places drawing or printed matter in a case which is inserted into the machine, uses hand controls (requires strong grip), exposes the photographic paper, cuts the proper length of the latter after exposure, rolls it into developing fluid, then transfers it to a "hypod" bath, rinses it in water and finally dries it in a heated dryer.

Operator, key-punch machine.

General Post Office, New York, N. Y.

Duties require continuous use of the Rogers and are performed sitting. Environment is extremely noisy.

Operator, two-speed press (four-post press operator).

Anthony Arsenal, Dover, N. J.

This operator places a screw die at the bottom of the machine chamber, then loads the machine with a block of explosive material and starts the press which forces the material through the screw die (to remove impurities); the material then emerges as "cannond-like" strands. (The extruded material is then fed into a press for final blanking.) The work is arduous; requires a great deal of bending and stretching of wrists. It is not suitable for women (except for very rugged types).

Operator, macerator (explosive handler).

Anthony Arsenal, Dover, N. J.

The duties consist of loading the machine with the material that has undergone the mixing operation, then starting the macerator and allowing it to run for a definite time. The mixed ingredients then are packed into containers.

The work is arduous. Environment contains ether vapors. Work is repetitive and monotonous.

Operator, merchandise, time-sizer.

Anthony Arsenal, Dover, N. J.

(See merchandise sentence for Operator, explosive.)

Operator, milling machine.

New York Navy Yard, Brooklyn, N. Y.

A milling-machine operator stands at his machine constantly watching the cut; he moves around, reaches and bends while adjusting the piece to be machined. He must possess very good near vision in order to read present gauge and to read the fine gradations of the adjustment wheels; he must have good depth perception. There are cuts and injuries to the fingers and flying metal chips.

Operator, mimeograph.

Signal Corps Photographic Center, New York, N. Y.

Duties and physical requirements for this position are similar to those described in the survey conducted at the New York Port of Embarkation for the position of mimeograph and mimeograph operator.

Operator, motion picture.

Signal Corps Photographic Center, New York, N. Y.

Operator spends all his work and uses his fingers a great deal in placing the film in the machine. Films weigh from 2½ to 5 pounds; duties are light. Pictures are produced during the "running" of the projector. There is the ever-present hazard of burning of the film. Work places the employee under a certain degree of nervous tension, so intellectually unstable person is not suitable for this position.

Operator, multilith, mimeograph, and mimeograph-machine.

New York Port of Embarkation, New York, N. Y.

This operator sets up and secures the photo, master copy, or stencil bearing the desired printing, and adjusts the various parts of the machine (ink flow, speed, and feeding of blank sheets). The operator stands by the machine while it is operating. Activity is light. The following physical disabilities are compatible with satisfactory performance of duties: Blindness in one eye impaired distant vision, impaired hearing, deafness, partial disability of one hand, amputation of one leg or foot compensated by satisfactory prosthesis, residual paralysis of both legs, arrested tuberculosis, compensated heart disease, and moderate hypertension.

Operator, planer-machine.

New York Navy Yard, Brooklyn, N. Y.

This operator uses entire upper extremities continuously; he stands at his work and also (at some machines) walks along a moving platform, and constantly watches the cutting of the metal. A peasant with several fingers missing could do this type of work. The major hazards to this work consist of wounds or burns caused by flying chips of metal which are intensely hot.

The machines are located in the same shop to which welders, drill-press operators, and chippers are working. The operator is therefore subjected to a great deal of noise which eventually may impair his hearing.

Operator, pneumatic-tube.

General Post Office, New York, N. Y.

Duties involve lifting outgoing loaded cylinder (30 lbs.) on to the pneumatic tube machine which automatically drives it through underground pipes; lifting incoming loaded cylinder from the machine; opening the cover (by turning a small handle) and emptying content on a conveyor belt; rerouting incoming cylinders from other stations into the proper outgoing tube leading to the designated station (indicated by name on clip of paper fastened to the cylinder).

Operator, punch-press (sheet-metal).

New York Port of Embarkation, New York, N. Y.

(See addendum sentence for Operator, single-moldine (sheet-metal).)

Operator, punch-press machine.

Plattling Avenue, Dover, N. J.

The operator sits at his work and controls the process by pressing a lever with his foot.

Operator, reamings-machine.

Plattling Avenue, Dover, N. J.

(See addendum sentence for Operator, drill-press.)

Operator, road-roller (utility).

Rome Air Depo., Rome, N. Y.

This employee operates a heavy machine that rolls over areas of the road that require smoothing. The duties entail the movement of foot and hand levers.

Operator, shaper-machine.

New York Navy Yard, Brooklyn, N. Y.

A shaper-machine operator stands at the machine while it is cutting. When a new piece is to be started he moves around, bends and reaches for various adjusting parts. He must be able to read fine gradations on precision instruments. He must also have good depth perception. Hazards are flying metal chips and possible injuries to the hands.

Operator, sorting-machine.

General Post Office, New York, N. Y.

Duties involve placement of batches of cards in numerous individual spaces, then setting the machine in operation. Sorted cards are then removed and arranged in a cardholder. Room containing these machines is noisy. Employees with arrested tuberculosis would not be acceptable because of the dusty atmosphere.

Operator, spring-buckling machine.

Plattling Avenue, Dover, N. J.

The employee operates automatic-screw machines into which is fed spooled wire; the finished coils are measured and tested. Workers are performing the duties satisfactorily in this position.

Operator, tabulating-machine.

New York Port of Embarkation, New York, N. Y.

The operator first sets the machine to perform a particular function, places the cards to be analyzed in a holder, and then starts the machine. Persons with various defects in vision under multilevel, multigraph, and mimeograph-unscaling operator may safely handle the tabulating machine.

Operator, tabulating-machine.

General Post Office, New York, N. Y.

Work is performed standing and involves the placing of batches of cards in the machine, (electric and automatic). As each batch is completed, various figures in columns are tabulated on a long sheet of paper. Environment in this section of the money order division is extremely noisy.

Operator, telephone.

New York Port of Embarkation, New York, N. Y.

This employee sits at his work, wearing headphones. He inserts and pulls plug into and from the proper openings, and speak into a microphone. These duties require good hearing and clear speech. Persons with paralysis of one or both legs, or amputations of the feet or legs or with one defective hand, or with immobilization of the spine are capable of performing the duties of this position efficiently.

Operator, telephone, and chief.

General Post Office, New York, N. Y.

This position requires good eye-arm muscle coordination and mental stability. Duties are light. The Post Office Department does not employ relief operators in New York City. Chief operator has the same duties plus administrative supervision.

Operator, tetryl-binder.

Pitney-Arcand, Dover, N. J.

This operator mixes graphite and tetryl by pouring definite amounts of each into a machine equipped with a hopper; after allowing the latter to run for a selected time, the mixture is scraped into boxes that are weighed.

Work hours:

Operator, tetryl dissolver.

Pitney-Arcand, Dover, N. J.

This operator allows a specific amount of benzene to run into a dissolving tank, heats the solution by running steam into the outer jacket of the tank, drops measured amounts of tetryl into the tank and starts the agitators to mix the ingredients.

The work is performed standing; requires closing of valves and lifting of containers of tetryl to the tank. Only rugged women are suitable for this duty.

Operator, tetryl-nitration, explosives founder.

Pitney-Arcand, Dover, N. J.

The operator mixes weighed amounts of ingredients for the formation of tetryl, subjects the solution to heat (steam) for a specified period, then cools and allows the solution to run off into pans. The operator must turn wheels, watch dials and record readings. Hazard of tetryl poisoning is present. Work involves moderate activity. Selected women could do this work.

Operator, threading machine.

Pitney-Arcand, Dover, N. J.

This operator stands at the machine into which is placed the object to be threaded, then starts the operation which is automatically controlled. The work involves moderate activity, is repetitive, and may be performed by women. A one-legged person or one-eyed person is suitable for this type of position.

Operator, tool grinder.

Pitney-Arcand, Dover, N. J.

This operator stands at a machine by which cutting tools of various types, including drills and cutters are sharpened by revolving grinding wheels. This position requires constant check of dimension by micrometers. The work is light and may be performed by women.

A one-legged person (wearing an orthopedic appliance) is able to do this work. Although a one-eyed person can operate the machine there is danger of metal or grindingstone particles entering the eye. Duties require a fairly high degree of skill in manipulating the controls properly.

Operator, tractor and lift.

New York Port of Embarkation, New York, N. Y.

These operators drive small tractors (electric or Diesel) some of which are fitted with two projecting arms in front, which may be hoisted or elevated by power from the engine. These latter vehicles are lift tractors. The arms fit into grooves built in the loading platforms. The ordinary tractors are used to pull trailers of loaded platforms.

Operator, trouser.

Nylon Clothing Depot, New York, N. Y.

The work is done by women operators and consists of sewing together, by machine, the parts of trousers. Excellent near vision is required. The activity, although light, is accelerated and carried on amidst a great deal of noise and psychic strain.

Operator, tumbler (laundry).

New York Port of Embarkation, New York, N. Y.

This employee places damp, soiled articles (towels, linens, etc.) into a machine (tumbler) that "tiffs" them by means of an air blast.

Activities are light.

Operator, turret-lathe.

New York Navy Yard, Brooklyn, N. Y.

A turret-lathe operator stands at his work, and does very little squatting.

He must possess excellent near vision, since he reads a micrometer and other stopgaps. His depth perception must be keenest. There are flying metal chips and possible injury to the hands.

Optical worker.

New York Navy Yard, Brooklyn, N. Y.

The optical shop is a new department. All optical instruments (binoculars, gun-range finders of all sizes, etc.) are cleaned and repaired in this section. Cleaning operations are performed at the bench; delicate touch and excellent near vision are required. There is a complete machine shop within this section; the lathes, drill presses, etc., are small models. The environment is not dirty or noisy. Activity is light. Women are well suited for this shop (many already employed).

Ordnanceman.

New York Navy Yard, Brooklyn, N. Y.

An ordnanceman takes apart ships' guns, cleans the individual parts by soaking in kerosene or other solution, rubs them by hand with emery cloth, lubricates them, reassembles the numerous parts, and tests the mounted mechanism after all assembly work is completed. Duties are performed especially by hand. Hand-operated hoists are used to move heavy parts from gun to floor. Removing corroded parts is burdensome activity. The men do a great deal of bending, but stand or sit at the various operations. A one-legged or one-eyed person could perform most of the duties satisfactorily. Women can help at cleaning and assembling.

Painter (utilites).

Rome Air Depot, Rome, N. Y.

This employee performs maintenance painting inside and outside the various buildings of the depot. The work is not arduous.

Painter.

General Post Office, New York, N. Y.

Duties involve minor painting, plastering, and glazing; duties are not arduous.

Painter.

Signal Corps Photographic Center, New York, N. Y.

Employee performs the usual duties of a maintenance painter; duties are not arduous.

Painter, ship.

Painter, shop.

New York Navy Yard, Brooklyn, N. Y.

The activities of a painter vary considerably. He may be required to paint the exterior of a new or an old ship, or he may perform duties in the shop, finishing guns, gun-control boxes, ranges, mortars, etc. The work of the former necessitates a person who is able to climb ladders and work on scaffolds. The ship painter has less arduous tasks, with less demand for physical fitness. Women are suitable for shop positions.

Parachute repairman (engineering).

Rome Air Depot, Rome, N. Y.

This employee inspects parachutes and repairs defective parts. The work involves hand-cutting, hand-sewing, and machine-sewing. In this section parachutes are wired, dried, and packed. A completely packed parachute weighs approximately 25 pounds.

Patrolman.

New York Port of Embarkation, New York, N. Y.

The duties of a patrolman vary. They include guarding the main gates (inspecting passes), escorting persons from one part of the base to another (involves climbing of stairs), standing watch at entrances and exits of various buildings (needle work), and handling crowds at the labor board office. Patrolmen serve in all these capacities in radiation. Outside duty exposes these employees to all kinds of weather. The activities of this position are light (standing, walking, and climbing stairs uniformly, but in an emergency may be arduous (handling many persons)).

Patternmaker.

New York Navy Yard, Brooklyn, N. Y.

Work is performed at benches, except in the case of large pieces requiring floor space. Persons with one good leg or one good eye, or lacking distal phalanges of the thumb could perform the work. Heavy work requires two good legs. Hazards are cuts, injuries from falling wood, and injuries to hands while using the planes.

Patternmaker (clothing).

Naval Clothing Depot, New York, N. Y.

Workers make original paper pattern that is the model for all material to be cut for a particular type of uniform. This work is done in a room that is removed from the shop proper. Activity is very light.

Pickling operator.

Planchay Arsenal, Dover, N. J.

The pickling operator stands his work in a humid atmosphere containing acid fumes. The operator lifts and places metallic objects into vats of acid cleaning solutions by means of hooks and then places the objects into water vats.

A one-eyed operator is physically able to perform this type of work, but is not recommended as there is danger of acid splashing into the eyes.

The work varies from moderate to uniform intensity depending on the size and weight of the objects to be cleaned.

Pipe coverer and troweler, ship.**Pipe coverer and insulator, ship.**

New York Navy Yard, Brooklyn, N. Y.

A pipe coverer works in the shop and on board ship. He first measures the pipe on board ship, then prepares the specified type of covering. The latter job involves the lay-out of canvas or other cloth, the rolling up of insulating material (which is asbestos or asbestos) and finally, the sewing of the cloth. The prepared covers are bound to the pipe by special wrapping cloth which is sewn in place. In the shop this employee may sit or stand at his work. The potential hazard in this trade is asbestos.

Pipe fitter, ship.**Pipe fitter, shop.**

New York Navy Yard, Brooklyn, N. Y.

The pipe fitting department operates two X-ray machines to locate defects at the joints of high-pressure pipes. The X-ray room is lead-lined. The workers move about the shop in which there are numerous large machines.

Hazards consist in injuries sustained as a result of falling pipes, and minor cuts.

These fitters assigned to ship duties tend to be more agile than those working in the shop.

Women could perform duties at many operations in this type of shop.

Plastic fabricator.

Rome Air Depot, Rome, N. Y.

The duties of this position involve the repair of the transparent plastic material covering the cockpit and nose fairing gun ports. Replacement requires laying, marking, cutting with a special band saw, and heating (so that the material may be bent to the desired shape).

Plumber (utilities).

Rome Air Depot, Rome, N. Y.

This employee repairs pipes and other parts of plumbing systems. The work is arduous.

Plumber.

General Post Office, New York, N. Y.

Employee is responsible for maintenance and repair of the water systems in the main buildings. He uses heavy hand tools, cuts pipe by hand, threads and installs it. Duties are arduous.

Powder-cutting operator.

Planchay Arsenal, Dover, N. J.

The operator places containers of strands (from granular operation) at the ends of metal troughs, then takes each strand, feeds it into the machine through a guide tube and starts the machine which cuts the material to the desired size. The small pieces fall into a basket which is emptied periodically into a large container. The work requires moderate agility. Women are employed at this machine. Employees must be tall, in order to reach across the machine in untangling strands.

Powder trucker, explosive.

Plentiny Arsenal, Dover, N. J.

This employee is a laborer whose duties consist of pushing a truck containing powder from one operation to the next. The load, and contains the powder at each stop. This work is arduous and is not suitable for women.

Press operator (clothing).

Naval Clothing Depot, New York, N. Y.

Work involves standing at a pressing machine operated by placing the material on a long ironing board, then pulling a corresponding board down (strong magnetic pull necessary) against the cloth and holding the upper board in this position; then the foot is pressed against a lever which releases steam through the upper board. Environment is warm and humid. This is strenuous work and not suitable for women.

Press-cutting machine operator.

New York Navy Yard, Brooklyn, N. Y.

(See underneath sentence for boilermaker.)

Presser, hand.

Naval Clothing Depot, New York, N. Y.

Work is performed in standing position at a bench and involves adjusting and smoothing material on a small ironing board and pressing with an iron that weighs approximately 18 pounds.

Presser, hand (heavy).

New York Port of Embarkation, New York, N. Y.

This employee presses garments that require hand ironing. Several employees press sheets, and team together work on one part of the garment and pass it on to the next presser. This type of work requires moderate exertion.

Presser, operator (heavy).

New York Port of Embarkation, New York, N. Y.

This employee stands at a pressing machine, holds the garment on the ironing board, steps on a lever that pneumatically lowers the movable board and then steams the garment. Unlike the older machines which required arduous exertion to operate, these new machines require light exertion.

Pressman operator (explosive handler).

Plentiny Arsenal, Dover, N. J.

The duties consist of placing weighed amounts of nitrocellulose in a paper liner, entering the latter to a large hydraulic press and dropping the material into the cylinder. (This part of the operation is performed by men.)

A female worker then turns the necessary wheels which start the press. She watches the dials until the operation is completed and then manipulates the controls again. The compressed block weighs 35 pounds. It is placed into large boxes for transfer to the next setting. The woman clean the press and floor after each operation. Work is repetitive and moderately arduous.

Primer assembler.

Plentiny Arsenal, Dover, N. J.

(See underneath sentence for Operator, primer (explosive handler).)

Primer assembler.

Plentiny Arsenal, Dover, N. J.

(See underneath sentence for Operator, primer (explosive handler).)

Property man.

Signal Corps Photographic Center, New York, N. Y.

Employee carries various items (trees, foliage, grass, etc.) from a truck or property room to the "set" and places them wherever directed. Duties are arduous and require a great deal of bending.

Property manager.

General Post Office, New York, N. Y.

Employee supervises all custodial work except that performed by the Mechanical Unit of the Custodial Service in Federal buildings, under the jurisdiction of the Post Office Department in the boroughs of Manhattan and Bronx. Position is purely administrative, and sedentary in nature. Employee may conduct inspection tours of buildings. He receives numerous consultations and must be able to pick up a telephone and simultaneously write notes.

Puller (laundry laborer).

New York Port of Embarkation, New York, N. Y.

A puller removes the dripping garments from the washing machine and places them in a hand truck. This activity is arduous.

Puncher, sheet-metal shape.

New York Navy Yard, Brooklyn, N. Y.

The puncher usually sits at a machine which is operated by pressing a foot pedal (large machines have two hand levers). Operator "lines up" the markings on the sheet metal with the die, then presses the pedal. The activity is not heavy. Depth perception is necessary.

The shearer stands at a large machine operated by a foot bar which lowers the cutting knife against the metal. There is no "lining up" before cutting. Activity is not heavy. Depth perception is not necessary.

Recorder.

Signal Corps Photographic Center, New York, N. Y.

Duties involve threading a roll of film into motor driven recording machine that makes a sound track of the sound important recorded on the film. Work is simple, light, and repetitive. On one type of apparatus the employee mounts the loaded magazine in the recording machine, turns on the motor and inspects the current by watching meters. Machine contains a mechanism which makes the sound track on the film, synchronized to the motion. On another type of recording machine the operator inserts the magazine, sets switches, etc., then constantly watches a unit which shows the oscillations of the sound waves as the track is made. If the amplitude of the waves extends beyond the discharge of the film, the operator calls the "mixer" on phone to inform him to diminish the intensity of the sound. All the steps in the operation of the recording machine except the observation of dials or meters may be performed by a blind person after proper training.

Repairman, induction, Hiramith.

General Post Office, New York, N. Y.

Duties involve the repair of truck radiators. Soldering irons and gas burners are used.

Repairman, motor apparatus.

Signal Corps Photographic Center, New York, N. Y.

Employee performs highly delicate manual tasks in the repair of sound recording machines. Activities range from light to moderate.

Retoucher, photographic.

Signal Corps Photographic Center, New York, N. Y.

Employee sits under an artificial light, uses fine brushes to retouch the positive print with black and gray pigments. Duties are sedentary.

Rigger.

New York Navy Yard, Brooklyn, N. Y.

This position requires good muscular development and good vision for distant and near objects; all extremities intact. Duties involve working around women, in ships and large objects. Workers move around the yard a great deal. Chief hazard is injury from crashing, or from swinging objects brought from cranes. This burdensome work for which women are not suited.

Rivet beater.

New York Navy Yard, Brooklyn, N. Y.

Work involves heating rivets to a certain color and placing the hot rivet into a pneumatic tube which "shoots" the metal to the beater. Chief hazards consist of burns from hot rivet.

The work is less arduous than that of the other members of the riveting crew.

Riveter.

New York Navy Yard, Brooklyn, N. Y.

This type of work is arduous. Good muscular development and all extremities properly functioning are required. Chief hazards are burns from hot rivets. Progressive deafness is the main occupational disease. Environment is extremely noisy, dusty, and riveter works in close quarters.

The work is the most active part of a shipyard around a great deal of machinery, and among other workers (welders, cutters) using potentially dangerous apparatus.

Sandblaster, ground duty.

New York Navy Yard, Brooklyn, N. Y.

The sandblaster works in a closed room and wears protective gloves and a rubber garment covering the entire body and uses goggles and a respirator. Duties consist of directing a hose through which steel shot and compressed air issue, against a metal object to remove the sand core. Environment is dusty.

Sew fiber.

New York Navy Yard, Brooklyn, N. Y.

A new fiber worker entirely within the shop. He uses operating machines that sharpen circular saws. Carpenters' saws require hand filing at the bench. The work is only moderately arduous; it is performed standing. A person with an artificial leg, with one eye, or lacking several fingers is suited for this trade.

Seamstress, hand.

Naval Clothing Depot, New York, N. Y.

This worker sews buttons on uniform while sitting. Sewing requires keen near vision.

Shearer (sheet-metal).

New York Port of Embarkation, New York, N. Y.

(See underhand sentence for angle machine operator (sheet metal).)

Sheet-metal worker, bench.**Sheet-metal worker, ship.**

New York Navy Yard, Brooklyn, N. Y.

A right-handed person with lost two fingers, tubed up on left hand can do this work. One-eyed persons could do the work efficiently, since it is all flat work. There are several men in this shop who are missing several fingers on the left hand. A one-legged man can be used in various parts of the shop. The metals used in this department are zinc, copper, brass, stainless steel, aluminum, and galvanizing material. The work involves sharp edges of metals, falling metal, metallic particles, and injuries to hands in operating machines of various types. Work on the ships involves climbing ladders, walking along narrow passageways, and work in small spaces. Workers must possess fairly good distant and near vision, natural hearing and all functioning extremities.

Sheet-metal worker (utilties).

Rome Air Depot, Rome, N. Y.

The duties of this position involve the repair of sheet metal fixtures in buildings of the depot. The work is arduous, requires strong person, and is performed in the shop (preparation of individual items and in scattered buildings). This employee operates various machines (tweaking, punch press, shearing machine, drill press, angle machines) and key out pattern on the sheet-metal.

Shipfitter.

Pleasant Arsenal, Dover, N. J.

(See underhand sentence for Operator, pyrometric (explosives handler).)

Shipfitter.

New York Navy Yard, Brooklyn, N. Y.

Some of these workers do rapidly and others lay out work. This is not a highly skilled trade. One-legged persons could perform many of the duties also persons with one eye or with amputated thumb and little finger.

Shipwright.

New York Navy Yard, Brooklyn, N. Y.

The shipwright performs heavy carpentry in the making of scaffolding around a ship and in building the ways for a new ship. He must be capable of arduous duty, he must be agile and possess normal functioning extremities. Work is in close quarters.

Sign painter.

Pleasant Arsenal, Dover, N. J.

The painter at the Arsenal works in a shop where stenciling or outline lettering on wooden panels or doors is done; mainly the sign painter stencils his work, uses hand brush or operates in spray gun.

These duties may be performed by a one-legged man wearing a suitable orthopedic appliance.

Splicer, film.

Signal Corps Photographic Center, New York, N. Y.

Duties involve sitting at a bench and operating a splicing machine manipulated by two foot pedals and hand levers. Work is light and requires good near vision. Women are performing this activity. A person with amputation of one lower extremity below the knee (with satisfactory prosthesis) could perform the duties satisfactorily. Employee sits at a counter with each foot on a pedal. He receives the roll of film marked with clips at points where it is to be spliced. The ends of the film at the cut portions are inserted into mechanism which "squares" the ends. The end of the film is then placed

on a block and about $\frac{1}{2}$ inch of emulsion is scraped off, glue is applied, and the two ends of the film encompassed together by movement of the foot pedals and the closing of hand levers. It is essential that the splicing be perfect in order that the film be usable.

Spreader (clothing worker).

Naval Clothing Depot, New York, N. Y.

Duties involve pushing a light carriage along small tracks laid out on a long table. The roll of cloth in the carriage bears several layers upon layer. The spreader walks rapidly from one end of the table to the other end, keeping the layers evenly piled. He does no bending or stooping, except when placing roll on the carriage. Environment is good. There is slight amount of dust present from the cloth.

Stage grip.

Signed Color Photographic Center, New York, N. Y.

Employee is a laborer whose duty is the movement of scenery in the studio. Activities are arduous. An amputation of one lower extremity below the knee (with satisfactory prosthetic) would not disqualify.

Stationary engineer (utilized).

Rome Air Depot, Rome, N. Y.

This employee operates equipment for the supply and control of heat, power, refrigeration, and ventilation.

Steam fitter (utilized).

Rome Air Depot, Rome, N. Y.

This employee repairs parts of the steam-heating system. The work is arduous.

Steam fitter.

General Post Office, New York, N. Y.

Employee is responsible for the maintenance of the heating system. He repairs radiators and replaces pipes. Duties are arduous.

Storekeeper (depot supply).

Rome Air Depot, Rome, N. Y.

The duties of this position involve the handling of supplies, classifying them to designated compartments. Accidents are taken from the appropriate shelves.

Superintendent (mechanical unit).

General Post Office, New York, N. Y.

Employee supervises staff of approximately 200 persons and is responsible for the maintenance of conveyors, and cleaning machines; repairs checks, typewriters, furniture, sentry, and letter boxes. Duties are administrative and technical in nature. He may also be called to investigate problems which his assistants cannot solve. During such times the superintendent is subjected to dust and variations in temperature (some parts of the building are cool).

Superintendent (motor vehicle service).

General Post Office, New York, N. Y.

Duties of this position are purely administrative and light.

Superintendent, mechanical.

General Post Office, New York, N. Y.

Employee supervises all phases of the work of the mechanical unit in the General Post Office and also in the field. He visits buildings in any part of the city to appraise certain types of repair. Duties are administrative and technical in nature. Physical fitness requirements are similar to those of superintendent of the mechanical unit.

Supervisor, route.

General Post Office, New York, N. Y.

Duties involve field supervision to investigate accidents, volume of mail handled at stations, "bottle necks" in transportation of mail, and submission of reports. He drives to stations under his jurisdiction.

Taper (ship).

New York Port of Embarkation, New York, N. Y.

The duties of this position consist in sealing all openings and cracks by truck and other motor-driven equipment that is to be shipped overseas to prevent the corrosion of the metallic parts by sea water. All glass panes are first covered with a well-fitting wooden panel which is held in place with special tape, then the entire panel is smeared with a water-proofing chemical. This work is performed in a shop or on board ship (more hazardous) and involves a great deal of climbing and bending.

Taper (slip).

New York Port of Embarkation, New York, N. Y.

(See addendum sentence for Taper (slip).)

Textile inspector.

Naval Clothing Depot, New York, N. Y.

This work, performed by men, consists of examining all the cloth that is to be used in making garments. The roll of material is uncoiled in a large frame before which the inspector stands. He feels the material for thickness, he looks for discoloration and for defects in the weave. Lighting for this type of duty is daylight. Normal color vision is necessary, as well as excellent near vision.

Tool clerk (engineering).

Rome Air Depot, Rome, N. Y.

The duties of this position involve the issuing of various implements and gauges for use in the various units of the engineering division. Women are utilized almost exclusively in this capacity. The work is light and necessitates prolonged standing and walking.

Tool maker.

New York Navy Yard, Brooklyn, N. Y.

Tool makers are expert mechanists who work at lathes, milling machines, shapers, planers, and drill presses. They use fine gauges and micrometers; hence, must have excellent near vision. Duties are performed standing. All operations are hand controlled and require the undivided attention of the operator. Job assignments are based on blueprints or drawings. The tool maker in the unit makes all the tools and gauges for production. Women can perform this work.

Tool-lend-renter.

Printing Amend., Dover, N. J.

The tool-lend-renter tempers all tools, gauges, and special parts in electric and gas furnaces; camber bathes are used for specific types of work.

This type of position requires the use of the arm and hand for steering and moving levers, and the leg and feet to operate the pedals. The hands do not have to be bent and an artificial leg will not interfere with efficiency.

Inside the warehouses the drivers are exposed to exhaust fumes.

Promoter blusher.

Naval Clothing Dep., New York, N. Y.

This type of work consists of cutting and removing threads from the finished trousers. Activity is light. Women stand or sit at their tasks.

Truck driver.

New York Port of Embarkation, New York, N. Y.

This employee operates a heavy truck (often trailer truck) in all kinds of weather over long distances. Color vision must be normal. The employee can drive safely with one intact hand and one partially defective hand; one good leg and one amputated leg with orthopedic prosthesis so that pressure may be applied against the foot pedal.

The work varies from light to strenuous.

Trucker, hand.

New York Port of Embarkation, New York, N. Y.

This employee's duties consists of pushing a loaded hand truck from one point to another. The work is strenuous.

Upholsterer.

New York Navy Yard, Brooklyn, N. Y.

The upholsterer cuts springs in chairs and divans and covers them with padding over which turpentine is stretched and tucked in place; the outermost material is then applied by means of tacks and blindstitching. The work is light, requires measuring, stitching, basting (light).

Vulcanizer.

General Post Office, New York, N. Y.

Duties consist in repairing rents and worn portions of inner tubes and tires. Activities vary from light to moderate (lifting tires from floor to work bench).

Washer, machine parts.

General Post Office, New York, N. Y.

Employee cleans small parts in kerosene; large parts are placed in a large tank containing a hot solution. Hot water has been found to remove superficial dirt; a hand brush is used to move heavy parts. Duties are arduous and the environment is dirty.

Washman (laundry).

New York Port of Embarkation, New York, N. Y.

This employee controls the washing process by turning valves to admit water, soap, and chemicals into the machines. These duties are light.

Welder, electric.

New York Navy Yard, Brooklyn, N. Y.

Toxic metals and nonmetallic elements in the occupation are lead, zinc, chrome, nickel, zinc chromate paint on steel plates, borax. The metal particles flying off the galvanized steel plate produce burns that heal slowly; chips may also burn the eye causing corneal ulcers. Fumes are harmful, producing "Glycylidistress" (chills, fever, vomiting, headache, cough, difficulty in breathing). In the shop fumes carry off the fumes, but within the holds of ships the fumes cannot always be used; these workers feel the effects of the fumes markedly.

The workers use helmets while working, through which they can see their work without being exposed to the glare of the intense light of the electric arc. The effect of the light may produce ophthalmia.

Color vision is not essential in this work, since welding apparatus is adjusted with electrical current regulating mechanism. The fumes produced during welding are irritating to the respiratory tract.

Welder, gas (utilized).

Rome Air Depot, Rome, N. Y.

This employee performs nonintense welding wherever necessary. The work is not arduous. The proper proportion of gases is judged by the color of the flame.

Welder, oxyacetylene.

New York Navy Yard, Brooklyn, N. Y.

This type of work is similar to that of an electric welder, except for the fact that the operation of the apparatus is different, since the flame is produced by the acetylene and oxygen and the welder must adjust the flame by its color (white or yellow). The same eye hazards exist as mentioned under welder (electric), except that the light is not so injurious to the eye (less ultraviolet component than electricity). Gas welders must be able to differentiate a white flame from yellow. The fumes are irritating to the respiratory tract.

Folding (sheet metal).

New York Port of Embarkation, New York, N. Y.

(See addendum sentence for Anglesmith (sheet-metal worker).)

Fundworker, aircraft engineering department.

Rome Air Depot, Rome, N. Y.

This section of the engineering department requires replacing any wooden item found on a plane. The machines comprising this shop are: Hand turning lathe (operator uses hand wheel and calipers), planer, shapers, and rotating saws. Activities require from light to moderate exertion depending on the assignment.

Frumper (chamfer).

New York Port of Embarkation, New York, N. Y.

This employee washes the reassembled contents of each flight after they have been checked by the shipping checker, and places them on shelves for delivery.

Activities are moderate.

4. HOME SERVICE DIVISION, CIVIL SERVICE COMMISSION**Aircraft-propeller mechanic, junior.**

Middletown Air Depot, Middletown, Pa.

The duties of this position can be performed satisfactorily by a properly trained blind person.

The employee disassembles the power unit of aircraft propellers, checks and reassembles it again. A complete job.

It is undesirable to employ a person who is handicapped by being both blind and deaf.

Batterymen.

Philadelphia Supply Depot, Philadelphia, Pa.

Duties of this position involve servicing batteries for all types of equipment in the depot.

Boilermaker (boiler tester).

Philadelphia Navy Yard, Philadelphia, Pa.

The duties of this position (Department of Public Works) are different from those of a regular boilermaker. The employee inspects boilers, rivets, inside and tests the boilers for leaks and recommends repair.

Bundler.

Quartermaster Depot, Philadelphia, Pa.

Employee has to load or bundle all or any garment material that goes to boiling press, such as cotton, trousers, etc.

Cutter and shear, quartz crystal.

Philadelphia Signal Depot, Philadelphia, Pa.

Employee operates small circular saw, cutting wafers from the quartz. Duties require standing for 2 or 3 hours at a time.

Cutter, cloth.

Quartermaster Depot, Philadelphia, Pa.

Duties involve continuous walking up and down along a long table the entire day.

Electrician (shop).

Philadelphia Signal Depot, Philadelphia, Pa.

Employee repairs and maintains all depot equipment. (Arduous work.)

Electrician, maintenance.

Philadelphia Signal Depot, Philadelphia, Pa.

Employee does construction work, repairs and installs motors, lamps, lights, takes care of all outside lighting, and also does repair work of power house. Duties are more arduous than those of shop electrician.

Engineer, heating.

Middletown Air Depot, Middletown, Pa.

The duties of this employee consist of the maintenance and repair of central heating plants.

Finisher, metal.

Philadelphia Signal Depot, Philadelphia, Pa.

Duties consist of cleaning iron, brass, copper, aluminum, etc., by putting the metal into water to remove paint, rust, ton, and rust so that the metal can be refinished. Very arduous duty position, and a dangerous one if extreme care is not exercised in operating the bath, which is used to finish metal surfaces.

Finisher, tester and holder, quartz crystal.

Philadelphia Signal Depot, Philadelphia, Pa.

A finisher grinds crystals to specified frequencies. A tester does practically the same work, and also tests the finished product. A holder puts the quartz crystal in holders.

Foreman, shift (box shop).

Philadelphia Signal Depot, Philadelphia, Pa.

Foreman supervises all work, has not daily work for personnel, and may assist in performing duties of jobholders in box shop if required.

General helper (filling nests for tin jackets).

Philadelphia Navy Yard, Philadelphia, Pa.

The duties of this position can be performed by a totally blind person. No standing is required.

General helper, boiling (quartz glass).

Philadelphia Navy Yard, Philadelphia, Pa.

The duties of this position can be performed by a totally blind person. It is impossible to employ a person who is handicapped by being both blind and deaf.

Grader, wafer and blank (quartz crystal).

Philadelphia Signal Depot, Philadelphia, Pa.

Duties consist in picking out defects on wafer or a quartz crystal by means of a reflection (waveplate and rotoscope).

Helper, aircraft firehouse, general.

Naval Aircraft Factory, Philadelphia, Pa.

The duties of this position are varied in character.

Lap grinder (quartz crystal).

Philadelphia Signal Depot, Philadelphia, Pa.

Duties involve the placing of a crystal of quartz in a lap grinder machine which grinds down the crystal mechanically. Worker merely times the machine from start to finish.

Mechanic, electrical.

Philadelphia Signal Depot, Philadelphia, Pa.

Duties consist of repairing all types of motor generator sets, dynamos, dynemotors, and any other rotating electrical machinery.

Mechanic learner (turning).

Naval Aircraft Factory, Philadelphia, Pa.

The duties of this position can be performed by a totally blind person.

The mechanic learner takes off surplus metal from castings and other pieces of metal with files, sand paper, and emery paper.

It is disadvantageous to employ a person who is handicapped by being both blind and deaf.

Mechanic learner (driving-up fasten).

Naval Aircraft Factory, Philadelphia, Pa.

The duties of this position can be performed by a totally blind person.

The employee walks back and forth continuously over a distance of 40 feet.

It is disadvantageous to employ a person who is handicapped by being both blind and deaf.

Mechanic learner, parachute assembler.

Mechanic learner, parachute trainer.

Mechanic learner, parachute packer.

Naval Aircraft Factory, Philadelphia, Pa.

The duties of this position can be performed by a totally blind person.

It is disadvantageous to employ a person who is handicapped by being both blind and deaf.

Assembler, maintenance (box shop).

Philadelphia Signal Depot, Philadelphia, Pa.

Duties of this position consist of keeping the woodworking machinery working properly. Mechanic also does woodworking as needed.

drillist.

United States Mint, Philadelphia, Pa.

A medallist is a highly specialized type of engraver who engraves medals and coins.

Naval Inspector, engineering material, Crown Cork Co.

Office of Inspector of Naval Material, Philadelphia, Pa.

Duties involve the assembly of rudders and stabilizers for aircraft. Work is mainly visual.

Naval Inspector, engineering material, R. J. Stoken Algebrite Co.

Office of Inspector of Naval Material, Philadelphia, Pa.

An employee with an amputated lower extremity, wearing a satisfactory prosthesis, would be acceptable, provided the amputation were below the knee and good function of the knee is retained.

Naval Inspector, engineering material, L. T. & C. French Brecker Co.

Office of Inspector of Naval Material, Philadelphia, Pa.

Duties involve the inspection of small parts, the operation of circuit breakers and switchboards, and the disconnection of switches, etc.; work is very strenuous. Any amputation of one lower extremity, with satisfactory prosthesis and good function below the knee would be acceptable.

Naval Inspector, engineering material, J. W. Thom Co.

Office of Inspector of Naval Material, Philadelphia, Pa.

Main inspection work is performed by inspector and consists of gaging .30 and .39 mm projectiles. Because of fumes given off by the vast amount of oil used both in the atmosphere and on the floor, the position is not suitable for persons having a history of lung disease.

Naval Inspector, engineering material, Quaker Bagger Corp.

Office of Inspector of Naval Material, Philadelphia, Pa.

Duties consist in inspecting fire and water hoses, sheet packing, switchboard mounting, etc. Because of fumes present in the establishment, the position is not suitable for persons with a history of tuberculosis.

Naval Inspector, engineering material, Westinghouse Electric and Manufacturing Co.

Office of Inspector of Naval Material, Philadelphia, Pa.

Duties consist of inspection of turbines, turbine-generators, electric motors and controls, and the inspection of small electric and mechanical parts. Employment is required to be on his feet all the time.

Operator, knuckle press.

United States Mint, Philadelphia, Pa.

The knuckle joint press used in the mint are a distinctive type of press developed primarily for coining purposes.

The duties of this position include the following: To sieve blanks which remove dirt, etc., before feeding them to the presses; to keep the presses in operation by feeding blanks into automatic hopper feeders; and to inspect blanks frequently to see that they are perfect.

The operator removes boxes of coins from the presses as they are filled, gauges the coins with a micrometer for thickness and diameter and closely observes the presses in his charge to see that they operate properly and do not overheat. The operator makes necessary adjustments to the dies to rectify trouble if possible and sees that the feeders keep continually feeding so that the dies do not blank.

Orbitator (quartz crystal).

Philadelphia Signal Depot, Philadelphia, Pa.

Worker takes and grinds a flat surface on raw quartz, mounts it on a piece of bakelite or glass with a special type of cement, and puts it in an oven to harden the cement.

Prayer.

United States Mint, Philadelphia, Pa.

The duties of this position include the following: Gauge strips to the proper thickness, set the finishing rolls to roll to the proper gauge and weigh blanks from the strips frequently to test their for weight. The pryer must be able to judge between a good strip and a bad strip, to use a micrometer to test for thickness of strips and diameter of planchets and to use small hand balances to test for weight of blanks.

Repolisher, instrument (mid-grade).

Philadelphia Signal Depot, Philadelphia, Pa.

Duties consist of overhauling all types of meters, dial instruments, Repolisher, instrument helper and junior helper.

Philadelphia Signal Depot, Philadelphia, Pa.

Junior helpers (under supervision) install springs and moving elements in the meter. Duties are routine; they are required to lift heavy boxes and place them on tables.

Repairman, telephone (all grades).

Philadelphia Signal Depot, Philadelphia, Pa.

There are several designations: Principal, senior repairman, helper and junior helper. Work covers a wide range. There are three main groups of work, viz., commercial, field, and coast artillery telephone repair. Senior builder and adjuster.

United States Mint, Philadelphia, Pa.

The duties of this position include the following: Performance of difficult work involved in the construction, adjustment, and repair of ultramatic scales and high-precision balances used in the weighing of bullion and coin. Inspection of all balances and scales in use in the plant daily and the making of adjustments to see that all weights are up to standard. Scales aide (all grades).

Quartermaster Depot, Philadelphia, Pa.

Aide tests and analyzes fabrics, leather goods, metals, insignia, badges, and other Quartermaster Corps commodities, checks bindings on submitted garments, inspects uniform findings, and recommends patches for garments, etc. Selector (female).

United States Mint, Philadelphia, Pa.

The duties of this position include the following: The review of uniforms as they pass on a portable belt and rejection of those defective. All women assigned to these duties are selected from the sewing women roster by special arrangement with the third United States Civil Service Commission region. They are required to be qualified sewing women because when the volume of work demands it, they are expected to alternate between the reviewing room and the sewing room in the Mint. Technician, cutting room (quartz crystal).

Philadelphia Signal Depot, Philadelphia, Pa.

Duties consist of etching by dipping trays of quartz crystals into hydrofluoric acid, also X-ray of quartz crystal to determine if it is cut at correct angle. Technician supervises the entire cutting procedure.

Technician, quartz crystal.

Philadelphia Signal Depot, Philadelphia, Pa.

Finisher on standards puts quartz crystals on a finished frequency by grinding, using a polymerized envarolite and water mixture. Finishing technician finishes the above process. Finisher on standards, or the finishing technician should not have a history of tuberculosis.

Technologist (seior and associate).

Quartermaster Depot, Philadelphia, Pa.

Amputation below the knee with satisfactory prosthesis acceptable.

Peder, supervisor.

Philadelphia Signal Depot, Philadelphia, Pa.

Duties consist of putting the equipment thru a high voltage test, degassing, testing for leakage, and calibration. This is an excellent position for a deaf mute.

Water tender.

Philadelphia Navy Yard, Philadelphia, Pa.

The water tender supervises the operation of a power plant; checks the feed-water pump, including the temperature, etc. Considerable climbing is done.

Under, armature (helper and junior helper).

Philadelphia Signal Depot, Philadelphia, Pa.

Helper and junior helpers do small armature work, which is not as strenuous as the work on the large armatures. Helpers and junior helpers sit most of the time while working on the smaller sized armatures.

Under, armature (seior and regular).

Philadelphia Signal Depot, Philadelphia, Pa.

Amputation of one leg below knee with satisfactory prosthesis acceptable. Worker, leather and leatherette.

Philadelphia Signal Depot, Philadelphia, Pa.

Worker should have good bilateral vision because of the nature of the work.

POSITIONS INVOLVING CIVIL SERVICE RATING

Automotive mechanic, assistant.

Aberdeen Proving Ground, Aberdeen, Md.

Some of the duties which come under the title of this position could be performed by women.

Automotive mechanic, junior.

Aberdeen Proving Ground, Aberdeen, Md.

(See addendum sentence for Automotive mechanic, assistant.)

Automotive mechanic, senior.

Aberdeen Proving Ground, Aberdeen, Md.

(See addendum sentence for Automotive mechanic, assistant.)

Blacksmith, heavy fires.

Blacksmith, other fires.

Blacksmith/apprentice, heavy fires.

Blacksmith/apprentice, other fires.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

One blacksmith in the navy yard has an artificial leg and performs duties satisfactorily.

Sulfuric dioxide in shop may be irritating to eyes.

Two ratings, "heavy fires" and "other fires" involve different degrees of physical exertion.

Blacksmith's helper, heavy fires.

Blacksmith's helper, other fires.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Sulfuric dioxide in shop may be irritating to eyes.

Two ratings, "heavy fires" and "other fires" involve different degrees of physical exertion.

Billetmaker.

Norfolk Navy Yard, Portsmouth, Va.

Deaf billetmaker must be able to read lips.

Billetmaker's apprentice.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Most billetmakers become deaf because of the noise. Hearing is required for instructions only.

Billetmaker's helper.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Hearing is required for receiving instructions. Loss of several fingers other than thumb or secondary hand would not interfere with proper performance of duties.

Box maker.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Both hands must be intact. The deaf or hard of hearing could perform the duties of this position satisfactorily. Persons with amputation of one leg (with satisfactory prosthesis) could be considered for this position. Organic heart disease if fully compensated would be unacceptable.

Cutter, wood (boat shop).

Norfolk Navy Yard, Portsmouth, Va.

The wood cutter works with hammer and chisel and two hands are necessary. Carpenter, mastodon.

Post Office, Washington, D. C.

Employee builds and repairs equipment, including trucks. Organic heart disease, fully compensated, acceptable for this position.

Carpenter, truck bodies.

Post Office, Washington, D. C.

Carpenter repairs wooden bodies on trucks; duties involve climbing.

Carrier, city mail.

Post Office, Richmond, Va.

Carrier loads sort unit before starting out on delivery. He is exposed to all types of weather.

Carrier, city mail.

Post Office, Washington, D. C.

Duties consist of carrying mail pouches weighing up to 50 pounds, walking an average of 12 miles a day, and working in all types of weather.

Carrier, parcel-post.

Post Office, Richmond, Va.

Post Office, Washington, D. C.

Carrier handles packages up to 70 pounds and sacks up to 100 pounds. Work is arduous and involves exposure to all types of weather.

Cartridge-case maker.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Duties could be performed sitting down or standing. Duties of helper involve materials with and long standing. Difficultly of work depends on size of cartridge.

Cartridge-case maker, helper.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

The helper does any lifting involved.

Cartridge-case maker, large hydraulic press.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Employee could be using several lifters. This is arduous duty and involves continuous lifting of 15 pound cases. Helper performed approximately same duties.

Cartridge-case maker, punch-press.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

This employee operates the machine in a sitting position using the right foot. He must stand up periodically to get new material. Good circulation is required.

Cartridge-case maker, helper, hydraulic-press.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Women could do work on small cases.

Cartridge-case maker, turret-drill.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Work on small cartridges not arduous. Helped to most of the lifting.

Women could work on small cartridges.

Chairman, janitor.

Post Office, Richmond, Va.

Secondary hand need not be intact, but employee must have two hands.

Charwoman.

Post Office, Washington, D. C.

Employment is part time (5 hours a day). Charwoman mops, dusts, and sweeps corridor. Hands need not be intact, but employee should have good grasping power.

Charwoman.

Post Office, Richmond, Va.

Secondary hand need not be intact but employee should have two hands.

Charwoman, head.

Post Office, Washington, D. C.

Post Office, Richmond, Va.

This is a supervisory position including furnishing instructions to charwomen, and also in determining and supplying material and equipment needs.

Cheeler.

Curtis Bay Ordnance Depot, Baltimore, Md.

These employees keep records of incoming supplies of small arms, munitions, and outgoing shipments of ammunition ready for use in the field.

Classified laborer.

Navy Proving Grounds, Dahlgren, Va.

These employees are hired as classified laborers and promoted to battery attendants after a few months' experience.

Clerk.

Post Office, Richmond, Va.

Clerk positions vary in duration and therefore vary in physical requirements. Some sort and stamp letters, others sort mail according to destinations. These both demanding positions. Others, such as clerks in the cashier's office, money order, war bond, and postal savings clerks have sedentary positions. Several men do directory searching on improperly addressed mail. This last mentioned activity demands good eyesight, but is otherwise very light work. General delivery mail requires prolonged standing.

Clerk, parcel post.

Post Office, Richmond, Va.

Clerk must handle packages weighing up to 20 pounds andacks up to 100 pounds.

Clerk, parcel post.

Post Office, Washington, D. C.

Clerk handles packages weighing up to 70 pounds. Window clerks are not exposed to dust and therefore may have a history of tuberculosis. Artificial leg braceable if it allows prolonged standing.

Clerk, postal.

Post Office, Baltimore, Md.

Clerks in money order section perform sedentary duties. Directory clerk also sits but takes time sitting until for other clerks. General delivery clerks never stand all day; phone, telegraph, clerks, and dead letter clerks, no sedentary positions. Some of these clerks could be deaf.

Clerk, postal.

Post Office, Washington, D. C.

Duties of this position vary with assignment. Window clerks do light work but must get up and down from stool and walk about distributing packages and either standing or walking; money order clerks are seated most of the time; clerks in the cashier's office are seated; inquiry section clerks are seated. Clerks in sedentary positions may have disabilities of the legs, hypertension, organic heart disease, and pneumothorax.

Clerk, telephone.

Post office, Washington, D. C.

Dilectate light and involve keeping records and filing.

Clerk, stock room.

Post Office, Washington, D. C.

Handle involve prolonged standing and lifting motor parts, such as brake drums, etc.

Coppersmith.**Coppersmith's apprentice.**

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Women could do the small, lighter work. Hearing is necessary for instruction only.

Cramerman, machine shop.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Cramermen in machine shop differ from those in other shops in that he works at lower levels and need not have good color vision.

Cupola tender.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Very arduous duty.

Custodian, assistant.

Post Office, Richmond, Va.

Position is supervisory in nature. Defective bearing corrected with hearing aid acceptable.

Dispatcher, motor vehicle.

Post Office, Baltimore, Md.

Duties involve prolonged walking and standing.

Dispatcher, motor vehicle.

Post Office, Washington, D. C.

Duties consist of checking trucks in and out. Work is light but requires getting up and down from desk to window. Employee must have an umbrella leg if function is satisfactory.

Driver, garageman.

Post Office, Richmond, Va.

Employee drives trucks with oil, gas, air, water, etc. One leg brace, able if satisfactory prosthesis is used.

Drop forger.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Employee uses chlorine machine for necessary repairs and adjustments. Presence of sulphur dioxide may be irritating to eyes.

Electrician.**Electrician, assistant.**

Post Office, Washington, D. C.

Duties consist of repairing water cooler, air conditioning units, fans, electric-eye door, odd storage plants, conveyors, etc.

Electrician, chief.**Electrician, leadingman.****Electrician, quartermaster.**

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Purely supervisory work.

Electrician, ship.

Norfolk Navy Yard, Portsmouth, Va.

An electrician's work on ship is arduous and requires full physical ability.

Electrician, shop.

Norfolk Navy Yard, Portsmouth, Va.

Women and handicapped men unable to do such work. A one-armed electrician would be acceptable working in the installation of power-plant operating switches.

Electrician's apprentice.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Employee predominantly works at high elevation.

Electroplater.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Hearing is necessary for instructions. Some of the electroplaters work at large guns around muzzle. These employees are physically examined every 3 months. They must be able to distinguish metals by color.

Engineman.

Post Office, Washington, D. C.

Duties involve the repair and maintenance of heating plant. Employee must be in good physical condition to cope with emergencies.

Engineman and helper.

Post Office, Baltimore, Md.

(See **mechanical sentence for Engineman, Post Office, Washington, D. C.**)

Engineman, assistant.

Post Office, Richmond, Va.

Employer is all-around repairing; duties involve steam fitting, plumbing, carpentry, repair of elevators, etc. One assistant engineer has charge of all facilities and charwomen.

Baggingman, chief.

Post Office, Richmond, Va.

This is almost entirely a supervisory position although in emergencies the chief engineer is called upon to assist the others.

Birdman.

Post Office, Richmond, Va.

Employee must be able to shovel 200 pounds of coal into wheelbarrow and wheel it to furnace.

Bureau, established shop.

Post Office, Baltimore, Md.

Duties consist of inspection and installation of mail boxes, supervision of erection of all letter boxes, keeping records of all boxes, and making all repairs to equipment.

Boundary checker.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Women could do the cold drawing and hand chipping with help of a helper, furnace man, foundry.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Women could operate some of the modern furnaces which are controlled by switches.

Carcassman.

Post Office, Washington, D. C.

Duties consist of washing, tubleading, and general cleaning of trucks, etc. gas cutter or burner, soldering, etc., done.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Women could do this type of work but not in this shop.

Glass blower.

Edgewood Arsenal, Edgewood, Md.

(See addendum under toe for glassblower apprentice.)

Glass-blower apprentice.

Edgewood Arsenal, Edgewood, Md.

This employee need have only one leg with satisfactory prosthesis.

Guard.

Captain Bay Ordnance Depot, Baltimore, Md.

The guards at this establishment must do considerable walking in the performance of their duties.

Guard.

Post Office, Richmond, Va.

Employee must be able to handle firearms.

Hammer thrower.

Norfolk Navy Yard, Portsmouth, Va.

The employee must obtain ladder to get to the controls which are located on a balcony.

Hammer thrower.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Women could operate steam banjoets. The presence of sulphur dioxide may be irritating to eyes. Employee must climb machine occasionally for adjustments.

Heat treater.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Duties vary a great deal - some women are employed at this rating in a purely clerical capacity.

Helper (female), machine shop.

Norfolk Navy Yard, Portsmouth, Va.

Employee with fully compensated heart disease would be unacceptable for part of the work.

Janitor.

Post Office, Baltimore, Md.

Position is supervisory in nature.

Joker.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Shoulders must have free motion but hips need not.

Joiner, supply shop.

Norfolk Navy Yard, Portsmouth, Va.

Employee with satisfactory prosthesis may do the work with one intact leg. Women could do some of the lighter work.

Junior checker.

Holabird Ordnance Depot, Baltimore, Md.

These employees make inventories of the automobile, truck, and other motor equipment parts which are in the warehouses.

Laboratory mechanic.**Laboratory mechanic, assistant.**

Aberdeen Proving Ground, Aberdeen, Md.

Some of the duties could be performed by persons with physical handicap involving the legs. Much of the work could be done by persons with normal vision.

The duties vary and include: Gun timer, loading, felt, receiving cartridge cases, measuring gauge, assembly of ammunition, weighing powder, loading cartridge cases, test-time calibration, and ammunition, and carrying by hand.

It is very difficult to complete a job analysis sheet on this position because of the variety of duties. Also, since there is no production at Aberdeen, an employee's duties may change from day to day, depending on the task which is being done at that time. There are some operations such as mounting timer and chronograph observations which allow the employee to sit down and would, therefore, permit employing the physically handicapped. One machine, used for loading brass cartridge cases, requires arm strength to exert about 400 pounds pull on the lever arm; therefore, would require sturdy, able-bodied person.

Laboratory mechanic, junior.

Aberdeen Proving Ground, Aberdeen, Md.

(See laboratory section for Laboratory mechanic, assistant.)

Laboratory mechanic, under.

Aberdeen Proving Ground, Aberdeen, Md.

Some of the duties could be performed by persons with a physical handicap involving the legs. Much of the work could be done by persons with normal vision.

The messengers also are employed as mail-delivery mechanics. If employee operates three-wheeled bicycle, carrying tools to be tested, fits the balance wheel to the front frame, stations. Without an employee riding, driving, running station wagon.

Laborer.

Charlotte Quartermaster Depot, Charlotte, N. C.

The duties of this position are to handle heavy and large of various types staple foods, bolts of canvas, and clothing materials in the warehouse.

Laborer, cartridge-case shop, Interm. room.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

This is very arduous duty and involves lifting and hot metal shot from furnace to melt with long pokers. Working environment is very hot.

Laborer, chipped.

Post Office, Washington, D. C.

Duties consist of moving supplies, cleaning, digging, cutting grass, shoveling snow, and washing windows. Both hands need not be intact, but must have grasping power.

Laborer, common.

Post Office, Baltimore, Md.

Organic heart disease, fully compensated, unacceptable for this position.

Laborer, postal.

Post Office, Baltimore, Md.

Employee distributes and transports packages, pushes truck. Bright and early begins his touring on performance of duties, provided the employee can do work which is very arduous.

Laborer, paint.

Post Office, Washington, D. C.

Duties involve handling heavy bags of paint and pushing truck load with bags.

Laborer, foundry.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Work is not too arduous, but is hot and dirty.

Lampist.

Post Office, Washington, D. C.

Duties consist of cleaning reflectors, changing bulbs, and replacing incandescent globes. (An average of 42 reflectors are washed a day.) Should and other joints should move in all directions. Partial degrees one or both arms unacceptable for this job.

Lay-out man, painter, machine shop.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.
 Duties not arduous in the sense of involving heavy work, but duties require an active, agile person.

Letter and grainer.

Norfolk Navy Yard, Portsmouth, Va.

No hand bending not required for all positions.

Laftanner.

Norfolk Navy Yard, Portsmouth, Va.

The employee may have racial paralysis of one leg.

Machinist, apprentice.

United States Naval Gun Factory, Washington, D. C.

(See addendum sentence for Machinist, production and maintenance.)

Machinist, assembly.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Flame assembly: Arduous duty requiring full normal function of both legs.

Punch assembly: Moderate duty and does not require full function of both lower extremities except that employee must be capable of ordinary locomotion.

Wearers sight, able to do some of the bench assembly.

Machinist, helper.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Both hands are needed but all fingers are not absolutely necessary.

Machinist, production and maintenance.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Duties include work on several types of machinery, including lathes, drills, planers, milling machines, boring mills, shapers, slotters, and radial drill press.

Marble polisher.

Post Office, Baltimore, Md.

Employee climbs ladders and scaffolding and works minor repairs on walls.

Master mechanic.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Duties are of supervisory type and involve often work. Persons with a hearing aid are acceptable.

Mechanic and helper, electrical.

Post Office, Washington, D. C.

Mechanic and helper service all conveyor systems and must climb all over the systems. They also work on motor, controlling machines, etc.

Mechanic, general.

Post Office, Baltimore, Md.

Duties consist of installing and removing street letter boxes, clearing mail chutes when obstructed. Cleaning, mending mechanics repair and maintain existing mailboxes. A reader mechanic may be required to carry scales.

All mechanics are detailed to fire fighting duties in emergencies.

Mechanic, general.

Post Office, Washington, D. C.

Duties involve trimmng inspection of motor vehicles and handling emergency break downs and minor overhauling. Shop is exposed to outdoor temperature.

Mechanic, learner.

United States Marine Barracks, Quantico, Va.

Employee works in the aircraft hangar, doing radio installation, typewriter and welding machine repair, etc.

Mechanic, learner (inside machine shop).

Norfolk Navy Yard, Portsmouth, Va.

Women are employed as crane operators but classified as mechanic learners.

Mechanic, radiator.

Post Office, Washington, D. C.

Duties consist of repairing radiators; arduous duty. Mechanic also works on fenders, gas tanks, etc. Hearing necessary for instructions.

Mechanic, special.

Post Office, Washington, D. C.

Duties consist of overhauling engines of postal vehicles and involve heavy lifting of radiators. An artificial limb would be acceptable provided the employee could stand all day and get up and down from the floor.

Messenger, motor vehicle.

Post Office, Washington, D. C.

Messenger drives a truck, transports boxes of mail weighing 100 pounds in the loading and unloading of trucks.

Metal roller and helper.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Duties are very arduous.

Millman.

David Taylor Model Basin, Carderock, Md.

The employee must be able to read blue prints necessitating good near vision.

Model maker.

David Taylor Model Basin, Carderock, Md.

The duties of a model maker vary with the size of the model. The physical requirement for large models are higher than for small ones. Merely handicapped persons could work on the miniature models while sitting down. They must have good near vision to read blue prints.

Moulder and apprentice.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Metallic gauze wire present in brass founders' jobs make it less work and might be performed by women since work is on smaller pieces. Apprentices should be able to bear ordinary concentration.

Munitions handler.

Curtiss Bay Ordnance Depot, Baltimore, Md.

Munitions handler unpacks small arms cartridges, matches cartridge in belts, and repacks according to Army specifications. Boxes handled unpack boxes and cartons, others denim boxes, others made entrelace Delta, others repack. The work is not arduous.

Operator, card-punch.

Post Office, Washington, D. C.

Deaf mutes with proper training would be acceptable for this position.

Operator, elevator.

Post Office, Richmond, Va.

There are two types of elevators to be considered: (1) the completely automatic which is suitable for person with one arm and (2) the partially automatic type requiring two hands and both for efficient operation.

Operator, elevator.

Post Office, Baltimore, Md.

All elevators in this office have electric control and could be operated by one-armed persons.

Operator, elevator, saddle machine shop.

Operator, elevator, supply shop.

Norfolk Navy Yard, Portsmouth, Va.

The elevator in this establishment is operated by electricity. This allows

Operator, freight elevator.

Post Office, Washington, D. C.

Operator jams pull down together using strap, and must push trailer and bags on and off elevator.

Operator, machine.

Holabird Ordnance Depot, Baltimore, Md.

These employees operate small machines used in grinding, polishing, and finishing small intricate parts, such as valves.

Operator, machine, drill-press.

United States Naval Gun Factory, Washington, D. C.

(See additional evidence for Muelfield, production and maintenance.)

Operator, passenger elevator.

Post Office, Washington, D. C.

Organic heart disease, fully compensated, is acceptable for this position.

Operator, punch-machine (print shop).

Holabird Ordnance Depot, Baltimore, Md.

(See additional evidence for Operator, stamping-machine.)

Operator, stamping-machine.

Holabird Ordnance Depot, Baltimore, Md.

The stamping machine is operated by one foot.

Operator, tabulating-machine.

Post Office, Washington, D. C.

Deaf mutes could be employed in this position.

Operator, threading machine.

Norfolk Navy Yard, Portsmouth, Va.

The operator's duties are not arduous except for prolonged standing.

Optical-parts inspector.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

This work is comparatively light.

Ordnance worker, female.

United States Naval Magazine, Belvoir, D. C.

Due to the variety of jobs done by these women, it is difficult to be specific in recommendation. Some workers stand; others sit; some need good near vision, others do not. The work could be done by a deaf person, but extra-audiopatent measures must be considered. The work is classed as hazardous, but if the safety devices are used and instructions carried out, there is really little danger. The supervisors are adept in placing individuals in the position in which they are best suited.

Ordnance worker, female, cartridge-case shop.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Workers operate machine by foot pedal, while in sitting position.

Ordnance worker, female, optical shop.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

The duties of ordnance workers, female, vary a great deal. There are some who stand all day and others who sit all day. Some do not need good near vision, and others need excellent near vision. Deaf persons could do none of the work.

On the whole, good vision and the full use of hands and arms are the main requirements. The supervisors of the shop change the women around in the various jobs to find the ones who are best suited to the work.

Ordnance worker, male and female (machining shop).

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

The duties of these positions vary but all involve light work most of which requires no standing. Women can not do all these positions very satisfactorily.

Some employees operate drill presses, others do engraving, sawing, small assembly, inspecting, building of parts, burring, gaging, trimming, and polishing. Some do work in asbestos, and others keep time records.

Ordnance supply shop.

Norfolk Navy Yard, Portsmouth, Va.

Some of the duties, consisting of weighing, polishing, and putting guns, could be performed by employees with disability or deformity of the lower limbs. Normal hearing is not essential.

Ordnance, first, second, and third class.

United States Naval Magazine, Belvoir, D. C.

The duties performed vary, and some require no standing, and consequently would not need all facilities of lower limbs. Physically handicapped persons could be placed here if the handicap were confined to the legs. The work is not arduous.

Packer.

Haberdashery Depot, Baltimore, Md.

The materials packed are small parts for automotive equipment. There is no ammunition packed at this depot.

Packer, supply shop.

Norfolk Navy Yard, Portsmouth, Va.

Some of the packers prepare material for mailing and railway express. This is light work and could be performed by women. Deafness would be unacceptable.

Painter, encastable.

Post Office, Washington, D. C.

Duties consist of retouching furniture and interior painting. "Painting-arm" must have free motion in all directions.

Painter, finish and insignia.

Navy Air Station, Norfolk, Va.

Fuzes with one leg are acceptable. Women are employed in "doping" fabric portions of airplane and spray painting.

Painter, motor vehicle.

Post Office, Washington, D. C.

Organic heat disease, fully compensated, acceptable. Hearing necessary for receiving instructions only. "Painting-arm" must have free motion in all planes.

Pattersoner Apprentice.

United States Naval Gun Factory, Washington Navy Yard, Washington, D.C.

Worker may have one artificial leg if it allows standing all day. Shoulder joints must have free movement but hip joints do not. The duties are not too laborious and organic heart disease of certain types would be acceptable.

Plasterer.

Norfolk Navy Yard, Portsmouth, Va.

Some plasterers perform duties that do not require hearing.

Plumber.

Norfolk Navy Yard, Portsmouth, Va.

Plumbers who work on ships are sometimes required to work in small spaces. Normal hearing is not absolutely necessary.

Plumber.

Post Office, Washington, D. C.

Organic heart disease, fully compensated, acceptable. Must have hearing sufficient to receive instructions.

Powder-factory attendant.

United States Naval Powder Factory, Holton Head, Md.

The duties of this position vary a great deal. Sounds of the work bounding other work is rather light.

Rib sticher.

Navy Air Station, Norfolk, Va.

Employee with fully compensated heart disease is acceptable.

Rigger (ship).

Curtin Bay Naval Gunnel Yard, Curtin Bay, Md.

This employee works with tops and wire, including lifelines, cables and hatches.

Riveter, ship.

Norfolk Navy Yard, Portsmouth, Va.

Ship riveter performs arduous duty.

Riveter, shop.

Norfolk Navy Yard, Portsmouth, Va.

In the furniture shop the duties require attention than those of a corresponding position aboard ship.

Sailmaker.

Norfolk Navy Yard, Portsmouth, Va.

Employee with fully compensated heart disease is acceptable.

Shipfitter, ship.

Norfolk Navy Yard, Portsmouth, Va.

The duties of shipfitter vary. Those who work in drydock must be able to do arduous work.

Shipfitter, shop.

Norfolk Navy Yard, Portsmouth, Va.

There are some places in the shop where arduous duty is not involved (blue room, lay-out section, blueprint section).

Spray painter.

Chemical Warfare Service, Edgewood Arsenal, Edgewood, Md.

This employee uses a paint solvent that is toxic. It appears to be particularly toxic to overweight persons.

Storekeeper.

Ordnance Depot, Curtin Bay, Ridgway, Md.

The duties of this position involve the storing and issuing of tools. The work is very light.

Storekeeper, assistant.

Norfolk Navy Yard, Portsmouth, Va.

See storekeeper, assistant.

Storekeeper, under.

Norfolk Navy Yard, Portsmouth, Va.

See storekeeper, assistant.

Tile-plate setter.

Norfolk Navy Yard, Portsmouth, Va.

Employees may perform the duties of tile-plate setter with fully compensated organic heart disease.

Traheen, lathe (machinist shop).

Edgewood Arsenal, Edgewood, Md.

This employee operates engine lathe, speed lathe, and cylindrical grinder.

Upholsterer.

Norfolk Navy Yard, Portsmouth, Va.

The upholsterer may have one artificial leg and perform the duties satisfactorily.

Watchman.

Post Office, Washington, D. C.

This position involves light work.

Welder.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Hammering is only necessary for instructions.

Welder, electric.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Duties depend on the piece of work. Small pieces are welded at a bench; larger pieces involve much more arduous duty.

Welder, electric, ballermaker shop.

United States Naval Gun Factory, Washington Navy Yard, Washington, D. C.

Some welding is done on large pieces of work, which requires climbing.

Women could not do all the various types of welding in this shop.

Wireworker, aviation.

Naval Air Station, Norfolk, Va.

This employee is a bench worker. Good eyesight and exceptional strength of hands and arms is required.

FIFTH UNITED STATES CIVIL SERVICE REGION

Cleaner, radiator tube, copper.

Brookley Field, Mobile, Ala.

Dirty tubes are placed on the work bench in a metal tray. Worker scrubs the tubes with steel wool until dirt and corrosion are removed, then either places rag between the steel wool and his hand, wears leather gloves, or does both. Worker holds the tube by one end in his left hand, and moves the steel wool the entire length of the tube with his right hand. When tubes are cleaned, they are placed in a metal tray on the work bench. Good gripping power must be present in the secondary hand.

Cleaner, spark plug, buffer.

Brookley Field, Mobile, Ala.

The employee performs the duties of this position while sitting at a bench.

Cleaner, spark plug, wire cleaner.

Brookley Field, Mobile, Ala.

The employee sits at a bench and uses a wire-cleaning machine, cleaning hub and felt to clean the core of spark plugs after they have been buffed.

Cleaner, spark plug, disassembler.

Brookley Field, Mobile, Ala.

The employee performs the duties of this position sitting at a bench. Dirty plugs are removed from one box, disassembled by hand and parts sorted into various boxes.

Cleaner, spark plug, reassemble and packer.

Brookley Field, Mobile, Ala.

The duties of this position are to reassemble the spark plugs (counting threads with exhaust oil), fit plug with good gasket, cap, and pack in carton.

Cleaner, spark plug, assembler.

Brookley Field, Mobile, Ala.

The employee performs the duties of this position sitting at a bench.

Clerk, auditor.

Post Office, Miami, Fla.

A person with amputation of both lower extremities would be acceptable provided he is able to get around from work.

Disassembler, generator.

Brookley Field, Mobile, Ala.

Employee processes a generator to be repaired or cleaned and, using a "block," pliers, punctuate screw drivers, and wrenches, dismantles it. Good function of both hands is required. Depth perception is necessary, but hearing is not essential. Duties require moderate physical exertion; part of the work is voluntary in character.

electric-inertia starter, disassembler, and assembler.

Brookley Field, Mobile, Ala.

These employees disassemble electric-inertia starters by using box-end wrenches, check bearings for defects (using defective bearings on the type writer) and reassemble the starters.

Minimum, assistant.

Post Office, Atlanta, Ga.

Employee must also perform the duties of an elevator mechanic, ader, film.

Brookley Field, Mobile, Ala.

Employee places empty magazine in magazine loading block; condition of magazine is determined by pulling lever on magazine loading block; condition of magazine is determined mostly by sound. Film is threaded on sprocket wheel, care being taken to see that perforations in film are properly engaged in sprocket teeth; film is looped and brought through film gate aperture; film is again looped and threaded on sprocket. End of film is clamped to take up slack. Separator is placed on separator post to prevent film from rubbing against itself; test lid is lowered and film is tested by giving it a half turn with the lever on the magazine loading block. Top of magazine is put in place and fastened down with two screws; aperture gate is closed. Loaded magazine is placed down in taking device; device is turned and tape is applied with the fingers until tape has been placed around edge of magazine where lid is down. Workers must take care not to cover any small openings at aperture gate. Magazine is labeled and stored. Above operations must be done in total absoletely dark room; work is particularly suited to the blind.

Naval Inspector, general engineering material.

Office of Inspector of Naval Material, Atlanta, Ga.

Employee inspects places of manufacture, machine work (20 mm. and 50 cal. machine gun mounts, convention mounts and also the fabrication and welding of gun shields). Inspection work requires close inspection of machine parts in working tolerances of .0005 inch and requires the use of standard measuring tools, such as micrometers, vernier, calliper, feeder gages, etc., and witnessing of tensile tests and operating tests. Inspection of gun shields involves inspection of fabrication in connection with drawings and inspection of welding with weld gauges, also use of proper type and size welding rods, and putting of the completed assembly. Upon completion of inspection, packing or handling of the unitized is observed.

Walking and long standing are required. Deformity of one hand or arm if not too great, moderate hypertension, or hernia with well lifting traps are not disqualifying.

Naval Inspector, hulls, engineering material.

Office of Inspector of Naval Material, Atlanta, Ga.

Employee inspects places of manufacture, amphibious landing tractors and cargo carriers in various phases of construction including inspection of welding of plates, stiffeners, cross frames, rivets, bolts, bearings, pins, etc. Duties involve careful examination of welding and installation of bearings, tracks and padding, and also involve use of tape-gauge and standard measuring instruments (such as micrometers, weld gauges, rules, tapes, callipers, etc.). Material may be subjected to tensile tests or bending stress test.

Naval Inspector, mechanical, engineering material.

Office of Inspector of Naval Material, Atlanta, Ga.

Employee inspects holes drilled at places of manufacture during complete fabrication for the following: Hole lay-out in form and after drilling and reaming, external fittings, multiple plate fittings, general surface inspection for defects inside and out. Also inspects tube holes, tapping and oiling of drums prior to shipping, and major-value physical tests on materials used in construction.

For this position walking and long standing are required. Employee should have good use of both lower extremities. A deformity of one arm or hand, if not too great, would not disqualify. Moderate hypertension or hernia with well lifting traps is acceptable.

Naval Inspector, ordnance, engineering material.

Office of Inspector of Naval Material, Atlanta, Ga.

Employee inspects munition work on antiaircraft projectiles. Work consists of accurate gauging of the projectile and visual examination of the shell for defects and the machine finish, both on inside cavity and outside surface of the projectile and rotating band; also when required inspects other engineer-

ing materials, such as machined parts for ordnance assemblies, firing mechanisms, ammunition boxes, etc. This inspection requires use of micrometers, thread gauges, plug gauges, "No" and "No Go" gauges, calipers, etc., and of standard testing machines for tensile and hardness tests.

Prolonged standing required. No sinusitis allowed. Moderate hypertension, cardiac disease fully compensated, or hernia with a well fitting brassiere will not disqualify.

Naval Inspector, Radio.

Office of Inspector of Naval Material, Atlanta, Ga.

Duties include inspection of radio equipment and transmitting and receiving sets of specified design and of confidential nature. Inspection consists of general observation of assembly of the sets or test soldering of connections, condition of insulation, insulation, etc., and general test in light of each instrument. Duties performed in factory. No prolonged standing required. Deficiency of one or hand if not too great, and artificial leg, acceptable. Vision in one eye acceptable. Color vision required. Moderate hypertension, untreated tuberculosis, or defective hearing in one ear will not disqualify.

Naval Inspector, Textile.

Office of Inspector of Naval Material, Atlanta, Ga.

Inspection consists of visual examination of the material implemented by taking samples and making or witnessing tests where required, taking samples to be forwarded to Government laboratory for tests. Visual inspection consists of surface examination of the material to determine whether or not it contains prohibitive defects and the determination of quality and workmanship. Tests include fiber identification and quantitative determination, construction analysis, breaking strength, thread count, elongation and tear resistance, weight, width measurements, color fastness determination, sizing analysis, shrinkage, and water permeability tests. The materials inspected include cotton fabric such as drift, duck, canvas, herring, chesnut, cloth, twine, linen, toweling, wooden and waxed fabrics, woolen blankets and garments; cotton garments such as bathrobes, underwear, socks; also sheets, pillow cases, mattresses and quilting of felt cotton, and cotton linens. Tyvek in seven states is involved. Textile Inspector should be physically fit except that he might have defective vision in one eye and defective hearing in one ear.

Naval Inspector, Timber, engineering material.

Office of Inspector of Naval Material, Atlanta, Ga.

Employee inspects all grades of hardwood and softwood lumber and timber, including poles, pilings, croissants, cross-ties, spuds, and wood paving blocks; conducts complete inspection for preservative and fireproofing treatment of the above material. Inspects bulkwork including crib, shanty, blinds, screens, etc.; inspecting cellulose wood products including furniture, tool handles, wood ammunition boxes, signal thives, etc.; inspects naval stores, including pine oil, pine tar, turpentine, resin, etc. Inspection includes examining the material to ascertain whether or not it contains prohibitive defects, study of plans for framing of materials, taking of samples and forwarding same to laboratory for chemical analysis if analysis is required, and making of physical tests to determine moisture content of wood or bending qualities of masts. Inspection of lumber and timber in the district cover seven states. Inspectors are often required to spend several days in the country assisting producers in assembling specification material. Inspector of Timber is required to be physically fit. Duties are varied. He may be in a factory inspecting furniture, in a lumber yard inspecting lumber, or in the swamps inspecting timber. Extensive travel is required.

Operator, telephone.

Post Office, Atlanta, Ga.

Post Office, Miami, Fla.

Duties can be performed by an operator with both legs amputated, provided he can use ordinary transportation to and from place of employment. One eye is sufficient if employee is assigned to one of the small sections of the hospital.

Rivet worker.

Brockley Field, Mobile, Ala.

This employee cuts salvaged metal and sweeps from the floor by the hangars. Rivets are sorted from nuts, bolts, screws, etc., into various head types and sizes.

Screw packer.

Brookley Field, Mobile, Ala.

The duties of this position consist of weighing and packing screws for shipment.

Stenographer and typist.

Post Office, Atlanta, Ga.

Stenographers and typists with disability or amputation of both lower extremities can perform their duties satisfactorily.

Stockkeeper, lumber, supply.

Brookley Field, Mobile, Ala.

In cooperation with a serving person a partially blind worker receives and stores material or collects various items on a pack or flat for shipping. This work may consist of unpacking and lifting heavy merchandise into storage bins, folding or otherwise preparing material for packing, shipping. All the persons employed have enough vision to walk without assistance, but not enough vision to do any type of mechanical work, unless they have had previous training to that line. Employees are reasonably strong men and are usually assigned to assist a person who is well. The serving person does the paper work in connection with stockkeeping; the partially blind men do the heavier work which entails lifting, etc.

DIXIE FEDERATED STATES CIVILIAN REVENGE REGIONS

Aircraft electrician.

Aircraft electrician helper.

Wright Field, Dayton, Ohio.

Actual hard physical labor is not the rule in this position, but certain places may require such work, though it usually is not sustained. Binocular vision is preferred, because of hazards, but monocular vision would suffice. Hearing is necessary, but absolute accuracy should be heard by earphones. Good functional manual dexterity is essential, and crippling deformities of the hands are not acceptable. Sense of balance, muscular coordination, and good use of lower extremities are essential, as the work involves climbing in, on, and around planes which may be at some height from the ground. Hearing impaired by a loss should not disqualify.

Aircraft mechanic, junior.

Aircraft mechanic helper.

National Advisory Committee of Accountants Airport, Cleveland, Ohio.

For usual shop or bench work, physical requirements can be lenient, but where all-round aviation work is to be done, the requirements must be higher. Good functional dexterity of both hands is required in most cases. Where installation and repair work is to be done, the lower extremities must be in good condition and at least 30-40 vision and finger No. 9 should be required in both eyes. Organic heart disease, moderate hypertension, varicose veins, hernia, ulcers, small and well supported by a strong and neurological condition should disqualify. Hearing is of lesser importance as the men are not engine mechanics, but the extra occupational hazard of the industry must be considered.

Aircraft painter, senior.

Wright Field, Dayton, Ohio.

The hazards resulting from paint operations are usually slight in the modern supervised plant, but they must be considered. Most large sprayng guns are outside, and smaller parts or buildings painting may be done inside. Arduous physical exertion is usually not required. Good function of lower extremities is essential, when the work necessitates climbing around planes or ladders or at some height from the ground. The good functional hand is required, but the secondary hand may be somewhat impaired. Binocular vision would not be necessary but good color vision is required. Chronic chest conditions should disqualify.

Aircraft sheet-metal worker.

Aircraft sheet-metal worker, helper.

Aircraft sheet-metal worker, plater.

Wright Field, Dayton, Ohio.

There are two types of workmen, plane and bench. The former requires higher physical standards; the latter may be more liberal. The primary hand must be good and the secondary hand must have a good grip. If tools bending is also to be done, greater physical strength is required. Metal

spinning may become in this category, and this requires good shoulder and arm function and strength. Good vision is required in one eye, but hearing may be impaired without greatly increasing the hazards. Agility and balance are definite requirements where work is being done on planes.

Aircraft-maintenance mechanic.

Wright Field, Dayton, Ohio.

While some of this work is shop or bench work, these employees are frequently required to install and repair turrets and armament on the planes, which involves working in cramped positions on and around planes which are above ground level. Hearing supported by a truss and moderate vertigo should not disqualify. Normal color vision not required.

Aircraft-engine mechanic, bench.

Aircraft-engine mechanic, plane.

National Advisory Committee for Aeromotoren Airport, Cleveland, Ohio.

Two possible types are present, one bench and shop work, the other installation and repair in planes. The former permits some relaxation of physical requirements but the latter requires good physical capacity. Work is arduous and involves good hand function (dexterity). Employee must be well proportioned and agile as the work is frequently at elevations and in cramped quarters. Binocular vision is to be preferred, but some persons with monocular vision could be employed. Hearing should be normal by at least one ear. Organic heart disease, moderate hypertension, marked varicities, and hernia undescended and well supported by a truss should be disqualifying. Any marked defect interfering with function of extremities, or torso, or any neurological condition should be cause for rejection.

Aircraft-engine test operator, junior.

Aircraft-engine test operator, senior.

Wright Field, Dayton, Ohio.

This position is one of the most exacting of the positions observed and involves the handling of very valuable and important material. The employee must be agile, strong, possess good near and distant vision, and must be mentally and emotionally stable. The work involves setting up engines to be tested, making test runs, tearing down of the engine compilation of run, and the maintenance of the equipment involved. Work is frequently above the ground level. Every effort should be made to maintain high physical requirements for this position.

Aircraft-maintenance supervisor, assistant.

Aircraft-maintenance supervisor, junior.

Wright Field, Dayton, Ohio.

The requirements are low because the work is primarily desk or clerical in character but should not be used as blanket requirements for all positions; when occasionally these employees are called upon to travel by air to view air needs, and on these occasions, may be required to climb about a plane in performing the work. Where several of these positions are located at one field or plant, some persons may be accepted who have disabilities less than those percentages, should be well qualified physically in order to perform the ordinary work that occasionally arises. For this latter group, organic heart disease, hypertension, hernia not supported by a truss, neurological conditions, marked defects in any extremity should disqualify.

Aircraft-radio electrician.

Aircraft-radio electrician helper.

Wright Field, Dayton, Ohio.

This position requires good physical condition; organic heart disease, whether or not compensated, hypertension, or any neurological condition producing marked incapacitation would disqualify. Hearing supported by a truss, varicose veins, and minor defects of hands or lower extremities should not disqualify, but any severe defect of any extremity should be cause for rejection, as the work requires agility and dexterity, especially in the installation or repair in plane work. If bench work is great enough in a particular plant to occupy a man, the requirements in that case should be much lower, and condition of lower extremities is of much less importance.

Aircraft-radio mechanic, bench.

Aircraft-radio mechanic helper.

Aircraft-radio mechanic, installed.

Wright Field, Dayton, Ohio.

More stringent requirements apply for work which may involve repair installation work in planes. Where the work is of the production type and is primarily bench work, the requirements can be lenient, and the condition

of the lower extremities is not an important consideration. Good vision, both near and distant, and good functional hands would be of minor importance, while other disabilities are secondary.

Blacksmith.

Blacksmith's helper.

United States Engineer, Sayler Park, Cincinnati, Ohio.

This position involves work of arduous nature and requires good physical condition. Monocular vision suffices, and impaired hearings may be considered in placement. Good functional hands, arms, and upper torso are required. Slight to moderate deformities involving the lower extremities should not disqualify providing there is good stability of stance.

Bolldrunker.

Bolldrunker's helper.

United States Engineer, Sayler Park, Cincinnati, Ohio.

Employee must be in good health and capable of performing arduous work. Small hands well supported by truss should not disqualify. Auditory acuity not required. Visual acuity necessary in one eye only. Hypertension and organic heart disease would disqualify. Height and weight of no great significance except that the applicant must not be obese. Hands, arms, and lower extremities must be in relatively good functional condition.

Bricklayer.

Wright Field, Dayton, Ohio.

This work is relatively arduous, and requires sustained effort. Agility is of marked importance, since the worker is required to crawl around uncompleted structures and work on uneven scaffolds or platforms. Extremities and torso must be functionally good. Minor defects of the secondary hand are not very important providing the applicant possesses a good grip. Hands supported by a truss would not disqualify, but organic heart disease or hypertension should be cause for rejection. Good distance vision is of minor importance, and binocular vision is preferred. Hearing is of secondary importance, although for safety reasons it is advisable to non person who hears at a distance of 10 feet in one ear.

Baffer.

Motor Plant, Engineer Department, Cincinnati, Ohio.

The chief industrial hazard in this work is from dusts and therefore applicants must be free from respiratory disease. Allergy should be sought for in the medical history of applicant. Primary hand must be in good functional condition and secondary hand may have minor defects providing that they are not too incapacitating. Vision should be 20/30 in one eye and hearing should be at least 10/20 in one ear so that shouted commands can be heard. Function of neck and torso should be good. Mild hypertension and hands supported by a truss should not disqualify, but vascular disease would be exaggerated by work of this nature.

Cabinetmaker.

Cabinetmaker, junior.

Jeffersonville Quartermaster Depot, Jeffersonville, Ind.

This work is not particularly arduous in nature, but prolonged walking and standing is required. Binocular vision is preferred, since the worker operates various machines such as wood lathes, planes, sanders, etc. Finger and hand function should be good, especially in the primary hand. Secondary hand may have minor defects or deformities but must be functionally good. Hearing is of secondary importance, and color vision is not required. Compensated organic heart disease, moderate hypertension and hands supported by a truss should not disqualify. Women, if properly trained, could do this work.

Carpenter, construction.

Carpenter, shop.

United States Engineer, Sayler Park, Cincinnati, Ohio.

The duties of this position may vary extensively. Shop carpenters may operate machines such as sanders, planers, band saws, circular saws, etc., and their work would be all on the ground floor level, whereas in construction, carpenters are required to climb ladders, work on scaffolds and on roofs. As a whole, this position requires good vision, with good functioning extremities and agility. Heart disease, hypertension, or neurological conditions impairing normal function of parts should disqualify. Hands supported by well-fitting truss should not disqualify.

Checker, clerical.

Checker, clerical, junior.

Cheeker, clerical, male.

Jeffersonville Quartermaster Depot, Jeffersonville, Ind.

This position involves prolonged standing and walking. Checkers occasionally may have to enter a freight car, but this usually does not require climbing, as the entrance is made from freight platforms. Color vision not essential. Hernia (supported by a brace), compensated heart disease, moderate hypertension, or moderate defects of torso or extremities should not disqualify, but marked varicosities would be disqualifying.

Cheeker, heavy duty.**Cheeker, heavy duty, junior.****Cheeker, heavy duty, senior.**

Jeffersonville Quartermaster Depot, Jeffersonville, Ind.

This position combines the duties of clerical checker and freight handler, the latter requiring the applicant to be in good physical condition and capable of performing arduous work. Good functional grip is essential in both hands. The upper extremities, torso, and lower extremities must be in good functioning condition. Compensated heart disease, moderate hypertension, hernia, and marked varicosities should disqualify. Color vision not required.

Chief of plant production.

Wright Field, Dayton, Ohio.

This position at a large plant such as Wright Field is primarily an executive one and does not require high physical requirements, but this does not apply to some plants where the chief must attend all major disorders and if necessary participate in their settlement, which would entail visiting fires, making arrests, or inspecting various parts of the plant; this work necessarily would require that the applicant be in good physical condition, have good vision, good hearing, possess the ability to run, and if necessary take part in arrests, etc., which may occur.

Clerk, junior, property and supply.

Wright Field, Dayton, Ohio.

The position observed was comparable to that of storekeeper, but the majority of the material handled was stationery or office supplies; stuck in delivery in crates and boxes which may weigh 100 or more pounds. Books and typewriters are also handled. The unboxed materials are placed on shelves which may reach such height that ladders are required. Where several employees are located in one unit, the physical requirements may be relaxed, and women may be employed, but where all-round capacity is required, the employee should not have organic heart disease, hypertension, or marked varicosities. Well-supported hernia would be accepted. Near and distant vision in one eye required, and basic saturated colors should be discernible. Secondary hand should have good functional grip, but minor defects should not disqualify. Hearing is of secondary importance.

Dispatcher truck.

Jeffersonville Quartermaster Depot, Jeffersonville, Ind.

Where this position is purely dispatching, the requirements can be lowered and the loss of one arm and hand or the loss of a lower limb would not interfere with performance of duties. The dispatcher is occasionally called upon to substitute for a driver, and higher requirements may be necessary. In general, the work is sedentary and requires normal elimination and normal hearing for telephone conversation.

Draughtsman, under engineering aide.

United States Engineer, Post Office Building, Cincinnati, Ohio.

This position involves work of sedentary nature and requires little physical exertion. The lower extremities are important only in getting the employee to and from work. Near vision in one eye is required. The primary hand must be functionally good and the secondary hand must be sufficiently good to steady T-square or other instruments. Hernia, compensated heart disease, mild hypertension, varicosities, impaired hearing, impairment of function of lower extremities should not serve as disqualifying factors.

Drill-runner helper.

United States Engineer Department, Melbourne, Ky.

A crew of two types of positions usually operate a drilling unit, the drill runner being the skilled operator and the helper doing the more manual work, although the runner frequently aids the helper. Sustained hard physical labor is not the rule, although the moving and setting up of the rig may require work of that nature; therefore, organic heart disease would

Disqualification. Varicosities (moderate or marked) would disqualify, for prolonged standing is involved in the work. Distant vision required in one eye. Hearing is of secondary importance. Fingers and hands must be functionally good to handle large wrenches. Minor defects or deformities of the lower extremities would disqualify.

Driver, truck, heavy duty.

United States Engineer, Sayler Park, Cincinnati, Ohio.

The truck soon in operation was a 6-cubic-yard dump truck. The usual clutch, brake, gear shift, and steering apparatus are used. In addition, there are hand levers in back of the driver which open or close the bottom of the dump truck. No marked physical exertion is needed in the operation, for it is mechanically loaded and dumped. Good vision, hearing, and color perception are required. Minor deformities of hands, feet, and legs should not disqualify. Sacro-iliac strain, lumbosacral involvement, recurrent lumbago or sciatica, marked scoliosis or kyphosis should disqualify. Small hernia supported by a brace should not disqualify. Varicosities, unless very severe should not disqualify.

Electrician.

Wright Field, Dayton, Ohio.

There seems to be little likelihood that the requirements can be lowered for this position as it requires that the applicant be able to work at high elevations and in cramped spaces. While this work is usually not strenuous in nature, the frequent use of all parts of the body is required. Organic heart disease, hypertension, neurologic conditions, varicose veins, or marked impairment of vision should definitely disqualify.

Engineer, Diesel, marine.

United States Engineer, Sayler Park, Cincinnati, Ohio.

Under normal operating conditions the work involved in this position is relatively light and consists primarily of supervising the operation of a Diesel motor; but in the event that repair or necessary, the type of work becomes somewhat more strenuous, although it need not be particularly arduous, for cranes or jacks are used for the heavy work. It may involve working in small, cramped spaces and require flexibility of the torso and all parts of the extremities. Monocular vision is all that is required. Normal hearing in one ear would suffice. Hernia supported by well fitting trusses should not disqualify. The primary hand should be in good condition.

Engineering aide, field.

Engineering aide, office.

Mirror Plant, Engineer Department, Cincinnati, Ohio.

The requirements for the beside worker in office or laboratory are less stringent, since the work is frequently sedentary. Loss of a lower extremity, compensated heart disease, hernia, unilateral vision or hearing should not disqualify. For the other types of aide (field), the requirements are higher. Here the employee must be capable of performing work involving exertion and agility, and defects definitely affecting this ability would be cause for rejection. Varicose veins, organic heart disease, unsupported hernia, and injuries or diseases impairing necessary motor functions are causes for rejection.

Engineman, assistant, steam, electric.

Engineman, steam, electric.

United States Post Office and Courthouse, Cincinnati, Ohio.

This position requires a well-proportioned person capable of performing arduous work, which may involve working under relatively high temperatures and in small openings. The work usually is not as strenuous as that of the man, but deformities or hypertension would disqualify. Minor deformities of hand or wrist, especially the carpal tunnel hand, would not seriously disqualify. Keen depth perception, keen near vision, or accurate color perception are not essential. Since the engineman is more or less entirely responsible for the physical requirements may be somewhat more lenient.

Engineman, derrick boat.

United States Engineer, Sayler Park, Cincinnati, Ohio.

This position involves responsibilities, and errors in judgment or certain physical handicaps may result in loss of life or property damage. Signals are given which involve sight and hearing, therefore distant vision and hearing must be good. The actual operation of the boom does not require great strength, but the repair and maintenance of equipment may involve work which is arduous in nature. In addition, this position involves crawling to

heights on the boom. Heart disease, hypertension, impaired vision, impaired hearing, or uncorrectable conditions impairing reaction time should disqualify. Minor deformities of the hands and fingers, providing function is relatively good, should not disqualify.

Engineman Janitor.

Wright Field, Dayton, Ohio.

Work involved in this position is primarily of the arduous type, and requires that the employee be in good physical condition; organic heart disease, whether or not compensated, hypertension, varicosities (severe), or hernia not supported by a truss should disqualify. Basic saturated colors should be recognized, for some individuals may show such colors.

Engineman, refrigeration.

Wright Field, Dayton, Ohio.

This position is similar in requirements to that of engineman, except that in addition there is the hazard of noxious gases which may be released during break-down of the refrigeration system. Chronic eye conditions would be aggravated by irritating gases. Allergies and sinusitis should also disqualify. Hands, arms, torso, and lower extremities should be in good functional condition. Near and distant vision should be approximately normal in one eye, and hearing should be good enough in one ear to recognize high-pitched sounds.

Examiner, clothing.

Jeffersonville Quartermaster Depot, Jeffersonville, Ind.

This work is very light in character and consists primarily in checking various types of clothing for specifications. The stock is brought in and taken away by other workers. Some employees perform the work at benches; others are required to stand. In the latter case, the applicant must have good legs, and hernia supported by a truss, compensated heart disease, or mild hypertension should not disqualify. Color vision must be keen for shades of color. Good hearing is not important. A person with an artificial limb could do the work. Women are doing this type of work.

Foreman, engine shop.

Wright Field, Dayton, Ohio.

This position is primarily an administrative one, and the physical requirements can be liberal. The foreman must be able to walk and stand for long periods of time. Hernia supported by a truss, compensated heart disease, mild hypertension, varicosities and deformities, or loss of a hand, arm, or leg would not necessarily disqualify, providing that in the case of the loss of lower extremity the applicant has a serviceable artificial limb replacing the limb.

Foreman, general.

Erie Proving Ground, Latrobe, Ohio.

This is an administrative position involving the coordination of various activities around the plant. It is not of the arduous type and allows for placement of the physically handicapped. The employee must be able to stand and walk. One hand must function enough to write. Binocular vision is preferred but monocular would suffice.

Foreman, general merchandise.

Wright Field, Dayton, Ohio.

The duties of this position usually do not require arduous physical exertion. It is primarily one of a supervisory nature and requires that the employee stand and walk and receive and answer inquiries pertaining to the work. Good near vision in one eye is necessary for the reading of blueprints. Organic heart disease (if compensated), mild hypertension, and hernia should not disqualify. Loss of one hand should not disqualify, providing a serviceable replacement is worn.

Foreman, leather and canvas worker.

Wright Field, Dayton, Ohio.

The work is chiefly administrative in character, but the foreman may be required to climb or crawl around and this would require that he have good functional control of the lower extremities.

The foreman at Wright Field also does regular leather and canvas work himself.

Foreman, packer.

Jeffersonville Quartermaster Depot, Jeffersonville, Ind.

This position is primarily supervisory and involves the direction of packing crews and the keeping of records of their activity. Some of the work is

sedentary, but the greater portion involves standing or walking. A functionally good artificial lower limb should not disqualify. One hand and arm sufficient, and slight functional limitation of cervical, thoracic, or lumbar spine or other joints should not be disqualifying.

Haulman.

United States Engineer, Snyler Park, Cincinnati, Ohio.

This position is similar to chemist laborer. It involves primarily helping the more skilled worker in operations, and the hasty man should be capable of performing arduous labor.

Harness cutter.

Jeffersonville Quartermaster Depot, Jeffersonville, Ind.

This work is not arduous but involves prolonged standing. Ordinarily the worker must lift weights up to 25 pounds. Employee must have bimanual dexterity. Compensated organic heart disease, moderate hypertension, or heart supported by a tricuspid should not be disqualifying.

Harnessmaker.

Jeffersonville Quartermaster Depot, Jeffersonville, Ind.

This work requires strong hands and arms and good finger function. Sawing is done both by hand and by machine. Binocular vision is preferred, but monocular would suffice. Normal color vision is not required. Some work may be bench work but frequently involves prolonged standing. A functionally good artificial lower limb would not disqualify.

Helper, mechanical insulation.

Mixer Plant, Engineer Department, Cincinnati, Ohio.

This position is comparable to that of machinist and may vary greatly according to the type of work performed.

Inspector, asbestos, chemical warfare materials.

Goodyear Plant No. 3, Akron, Ohio.

Under this category come all the various inspectors in gas mask production and assembly. Some inspection oftentimes involves examining carriers, others operate foot pedal while testing valves, still others oftentimes involve checking various phases of the work. Manual dexterity and normal near vision are required. Some positions involve prolonged standing. Contact dermatitis, while not common, occurs in the handling of rubber or adhesive. These positions offer pleasant possibilities for a large variety of physical handicaps.

Inspector, assistant, general construction.

Inspector, general construction.

Wright Field, Dayton, Ohio.

The work is not primarily arduous, but the employee may be called upon to perform arduous work, such as climbing around incomplete buildings. Vision and extremities must be in good functional condition. Binocular vision is preferred because of hazards involved.

Inspector, engineering materials, mechanical.

Cincinnati Naval Inspection District.

Cincinnati Milling Machine Co.

This work may vary with the type of material inspected. The employee must be capable of standing and walking; a good functional artificial lower limb should not disqualify. The secondary arm or hand may have impairment, provided it is not too great. Hearing should be at least 15/30 in one ear for some jobs. Older men or women can usually perform work of this nature. Moderate hypertension, cardiac disease, if compensated, and heart supported by a tricuspid would not disqualify.

Inspector, engineering materials, mechanical.

Cincinnati Naval Inspection District.

Cincinnati Milling Machine Co.

This work is similar to that done by the inspector of engineering materials, but ordinarily involves working around larger machines along a production line. This involves good vision, hearing, and coordination, since large machines or machines may be moved over or near the worker and he must be able to hear the signals and move fast enough to get out of the way of the arms. The lower extremities must be capable of fairly rapid motion. Mild hypertension or heart supported by a tricuspid should not disqualify.

Inspector, leather.

Jeffersonville, Quartermaster Depot, Jeffersonville, Ind.

This particular position requires normal vision in one eye. The work is not arduous in character but requires good functional use of both upper extremities. Prolonged standing is necessary, and while an artificial limb

would not disqualify, marked varicosities would. Hernia supported by a truss, compensated heart disease, and moderate hypertension should not disqualify.

Inspector, levee and embankment.

United States Engineer Department, Portsmouth, Ohio.

The work involves climbing up and walking along levees or embankments which may be rough and irregular in contour, therefore the lower extremities must be in good functional condition. Obesity is a definite handicap.

Inspector, telephonewire supplies.

Jeffersonville Quartermaster Depot, Jeffersonville, Ind.

Little or no arduous duty involved in this position, although it involves prolonged walking and standing. Bushy saturated colors should be recognized. A one-armed person could do the work. A functionally good artificial lower limb would be acceptable.

Inspector, ordnance materials.

Aluminized Lubricator,

Cincinnati, Ohio.

This position varies greatly with the material inspected but in any case requires little or no arduous duty, although prolonged standing is an integral part of the work. Normal color vision is required, since some of the testing apparatus have various colored lights. Hernia supported by a truss, moderate hypertension, and compensated heart disease should not be disqualifying. Dexterity of both hands and good functional use of extremities and torso required. Gaging and interrometer work is done and depth perception should be required.

Inspector, powder and explosives.

Battalions Ordnance Works, Charlestown, Ind.

This position is not arduous in character but involves prolonged standing and walking. Feet and legs should be in good condition. One hand and one arm would suffice. Binocular vision is to be preferred. Normal color vision for saturated bushy colors is required. Hernia supported by a truss is unacceptable; but organic heart disease, hypertension, and marked varicosities should disqualify. The possibility of toxic dermatitis must be considered. This position involves working in rooms which have a relatively high content of alcohol and other vapors.

Inspector, drivers and ranges.

Jeffersonville Quartermaster Depot, Jeffersonville, Ind.

Work is not arduous. Employees must be able to stand for long periods. The repetition of same long ranges may require the use of small stepladders or stools; otherwise the work is done at floor level.

Inspector, tents and clothing.

Inspector, textile and clothing.

Jeffersonville Quartermaster Depot, Jeffersonville, Ind.

The work is not arduous in character, but involves prolonged standing; however, a good artificial lower limb would be acceptable. The primary hand must be good, but the condition of the secondary one is not important. Shades of color should be discernible. Work is light and done on ground floor; therefore, compensated heart disease, moderate hypertension, and hernia supported by a truss should not disqualify. Some of the material is sized or treated with chemicals which may occasionally cause a contact dermatitis, therefore a definite history of allergy should be considered in placement for this position. Because of this, persons with chronic chest conditions should be disqualified.

Inspector, wheel products.

Jeffersonville, Quartermaster Depot, Jeffersonville, Ind.

The work involves inspection of wood and fabricated products made of wood and is not arduous. It does require prolonged standing and walking. Color vision should be normal, preferably for shades. While the possession of all extremities is preferred, the employee could do the work with one upper and one lower extremity.

Lubricator, electrician.

Jefferson Proving Ground, Madison, Ind.

This position combines the duties of a lubricator and an electrician, and the requirements are therefore high, since the work is both arduous and hazardous. Pole climbing and high-tension tower climbing is done, thus combining the hazards of height and high currents of electricity, and every effort should be made to maintain a high standard for physical requirements.

Lockman,

Dinner 36, United States Engineer Department, Silver Grove, Ky.

This position requires that the employee be in good physical condition, capable of performing arduous work under rather hazardous conditions. Vision should be correctible to 20/30 in one eye and 20/300 in the other eye. Sustained color vision must be discerned. Hearing should be good, 15/20 in one ear. Both legs and arms are necessary for performance of duty, and any condition hindering any extremity should be disqualifying. Organic heart disease, whether or not compensated, hernia unsupported by a truss, hypertension, and any neurological condition impeding stability or interfering with normal nervous reaction should disqualify.

Machinist, ornamental, vendor.

Fort Hayes, Columbus, Ohio.

The applicant must be in good physical condition and capable of performing sedentary duties which may necessitate working in cramped and awkward positions on the various mobile units equipped with guns. Bilateral manual dexterity is required, and the extremitie, joints, and torso must be functionally good. Bilateral near and distant vision are preferred. Color vision must be required. Any serious organic defect or disease should disqualify. In large ordnance plants where large crews are employed and both or much work is done at ground-floor levels, these requirements may be lowered to compare with those of the average machinist.

Machinist, production.

United States Engineer, Sayler Park, Cincinnati, Ohio.

There are two distinct types of machinists, one production and the other maintenance. Production machine operation mainly based on column duty and persons with hernia supported by a truss, mild hypertension, compensated heart disease, or loss of one of the lower limbs, providing an artificial limb is worn, would not be disqualifying. Maintenance machinists should have higher requirements, as they are called upon to repair and maintain the machinery, which may involve working in cramped or unusual positions requiring agility and strength and a higher degree of manual dexterity.

Mechanic, automobile.

Motor Vehicle Service, Post Office, Cleveland, Ohio.

This position requires that the employee be capable of relatively sedentary (but not sustained) labor from time to time. The person must be fairly agile and not obese. Free motion of all extremities and torso is necessary. Moderate hypertension under medical supervision should not disqualify. Hernia, if small and well supported by a truss, should not disqualify. Good near vision, depth perception, and color perception are necessary.

Mechanic, general.

Erth Flying Grounds, Lacourne, Ohio.

As the title implies, the employee must be capable of performing a great variety of work and therefore must be in good health and capable of performing arduous duty of almost any nature. Finger, arm, hand, leg, torso, and joints must be functionally good. Binocular vision is preferred, but monocular would suffice. Normal color vision is not required. Hearing must be acute in one ear for operation of certain machines.

Mechanic, instrument, aircraft, bench.**Mechanic, instrument, aircraft, plane.**

Wright Field, Dayton, Ohio.

The requirements for bench work pertaining to aircraft instrument work are relatively low, and persons should be acceptable for these positions with hernia, compensated heart disease, varicose veins, hypertension, and deformities or defects of the lower extremities. For installation or repair work of instruments on planes, the requirements are necessarily much higher, and good functional use of the lower extremities is essential.

Mechanic, radio.

Wright Field, Dayton, Ohio.

This work is chiefly bench work and does not mainly require good functional use of the lower extremities. As a rule, if any major defect occurs in a plane radio, the whole radio is removed and the repair work is done in the shop. Near and distant vision must be good. Normal color vision (true saturated colors) is required. Manual dexterity is of prime importance. Hernia, hypertension, organic heart disease if compensated, should not disqualify.

Mechanic, senior, aerial photographic camera.

Wright Field, Dayton, Ohio.

This position is in the shop and is mainly bench work. Good grip in the arm/hand is required and a good functioning primary hand is essential. There is little ambient work as a rule. The maximum weight handled is about 150 pounds, and this is handled with the aid of assistants. Normal color vision is not essential. Loss of one lower limb, with satisfactory prostheses, should not disqualify against employment. Occasionally employees in this position are required to install or remove cameras from planes; however, in such instances the foreman could choose men with good lower extremities for this task.

Mechanic, special automobile, body builder.

Post Office Department, Motor Vehicle Service, Cincinnati, Ohio.

This position is a combination of carpenter, cabinetmaker, and light sheet-metal worker. Fingers and hands must be in relatively good functional condition, but minor defects should not disqualify. Marked obesity would be a handicap. Both legs should be functionally good, since some climbing is involved in performing the duties.

Mechanic helper, general.

Mirror Plant, Bagdad Department, Cincinnati, Ohio.

The employee should be capable of performing arduous duty. Minor defects or deformities of hands or lower extremities should not disqualify, provided function in the affected part return relatively normal.

Millhand moulder.

Jeffersonville Quartermaster Depot, Jeffersonville, Ind.

Employee must be capable of performing arduous work in the presence of excessive heat and noise. Normal color vision is required to determine chemical constituents in smoke stacks. Persons with chronic chest conditions should be rejected.

Millwright.

Wright Field, Dayton, Ohio.

This position is comparable to machinist (mechanic) but frequently involves more arduous work. It consists of setting up, repairing, and maintaining machinery. Normal color vision is not essential. Upper and lower extremities should be in good functional condition. Hearing is of secondary importance, although the employee should be capable of hearing high-pitched sounds in one ear.

Naval Inspector, ammunition, E. H. Lawton Co., Cincinnati, Ohio.

Officer of Inspector of Naval Material, Cincinnati, Ohio.

Employee inspects the parts and completed articles of fabricated metal and galvanized articles such as G. I. cans, depth bombs, demolition cans, etc. Some of these articles are large, bulky, and may weigh up to 80 pounds. Certain phases of inspection require the use of both hands. Prolonged standing and walking is involved. Compensated heart disease, arrested tuberculosis, moderate hypertension, hernia supported by a brace, or impaired hearing will not disqualify.

Naval Inspector, ammunition (associate and under).

Naval Inspector, ammunition (resident), Cincinnati Ballistic Co., Cincinnati, Ohio.

Officer of Inspector of Naval Material, Cincinnati, Ohio.

Inspection of 20 min. projectiles involves visual inspection and the use of various types of gauges. Work is done in a sedentary position and is best performed by persons possessing two good hands; work could be done at a slower pace by persons having one hand. Resident inspector must be deaf or deaf mutes. Speak and hear normally but minor inspectors could be deaf or deaf mutes. For the blind inspection, one good eye would suffice. In the snap gage work, the blind could perform the work with little difficulty. This presupposes a setup, where the visual inspection is done first and arrangements are made to safely employ the blind. There are no hazards other than entry and exit to job. A blind employee must have good function of both upper extremities and have no hearing defects.

Naval Inspector, castings (resident), Aluminum Industries, Cincinnati, Ohio.

Naval Inspector, castings, heavy (associate and under), Aluminum Industries, Cincinnati, Ohio.

Naval Inspector, castings, light (associate and under), Aluminum Industries, Cincinnati, Ohio.

Office of Inspector of Naval Material, Cincinnati, Ohio.

Employee inspects aluminum castings which vary in weight from a few ounces to about 50 pounds. Small part inspection may be done while sitting but inspection of larger castings is done standing and requires some heavy lifting. Environment is poor, except for rather muted noise. Resident inspector is expected to be able to talk and hear but the under inspector could be deaf or mute. Good vision in one eye is required and good primary hand and functioning secondary hand is also essential. Compensated heart disease, arrested tuberculosis, hernia supported by a brace, loss of lower limb (with prosthesis), loss of one eye, or minor skeletal defects would not disqualify.

Naval Inspector, elevator assembly, airplane, Williamson Hunter Co., Cincinnati, Ohio.

Office of Inspector of Naval Material, Cincinnati, Ohio.

Employee inspects leading edge of airplane stabilizer, wing or elevator (practically all visual inspection). Inspector holds small electric lamp in one hand and a dental mirror in the other and views the rivets, etc., in the depths of the subheated part. Fiducial surfaces and sloped and pointed surfaces are also inspected. Work is done standing. If production were large enough, climbing balance take could be inspected sitting. No ordinary work is involved. Deaf mutes are acceptable. Open-handly Inspector enters spray shop but never for a prolonged period and no real hazard exists. Hernia supported by a brace, moderate hypertension, organic heart disease (compensated), minor skeletal defects, or loss of lower limb (with adequate prosthesis) would not disqualify.

Naval Inspector, machinery, Cincinnati Shaper Co., Cincinnati, Ohio.

Naval Inspector, machinery, Lodge and Shipley Co., Cincinnati, Ohio.

Office of Inspector of Naval Material, Cincinnati, Ohio.

Employee observes tool inspection of lathe, shaper, power brokes and shears; duties involve visual inspection. Color vision not required. Walking thru the plant and prolonged standing are also involved. Hearing is one ear is necessary for time or power train variation signal. No actual heavy physical work is involved although occasionally Inspector may be called upon to climb heights of 12 to 18 feet to check motor or other parts. Majority of work is that of observing company inspections. One hand should be good enough to perform adequate writing. Compensated heart disease, hernia supported by a brace, moderate hypertension, impaired hearing in one ear, arrested tuberculosis, and no major skeletal defects which do not impair locomotion would not be disqualifying.

Naval Inspector, motors, fall protection, Allis Chalmers Co., Norwood, Ohio.

Office of Inspector of Naval Material, Cincinnati, Ohio.

Employee inspects motors, generators, pumps and similar equipment. While the work is not continuously involving the Inspector is often called upon to lift weights (up to 80 pounds); he stands for long periods of time and walks over large areas; he may have to stoop and bend to observe tool runs. Good primary hand and functioning secondary hand are necessary. Lower extremities must be functionally good. Due to the nature of the work, production line inspection is almost impossible.

Naval Inspector, ordnance, American Can Co., Cincinnati, Ohio.

Office of Inspector of Naval Material, Cincinnati, Ohio.

Inspector checks 6 inch .38 caliber breech blocks. Work involves the use of plug depth, snap, feeler, thread, and height gauges. Work is stand at table and the block, which is placed on table by company workers, is then turned by the Inspector when performing the various inspection procedures (block weighs 125 pounds). Arduous work is not sustained. Loss of one lower extremity (provided by prosthesis) would not disqualify. Hearing must be sufficiently good to carry on conversation and communicate with plant officials.

Naval Inspector ordnance (resident).

Naval Inspector, ordnance, heavy (associate).

Naval Inspector, ordnance, light (associate).

Naval Inspector, ordnance, heavy (under).

Naval Inspector, ordnance, light (under), Corcoran-Brown Lamp Co., Cincinnati, Ohio.

Office of Inspector of Naval Material, Cincinnati, Ohio.

Separate functions involved in this inspection are the visual and gaging inspection of the component parts of the magazine, and the other the final inspection of the assembled magazine. The former is small-part inspection and can be done while sitting, but the latter is done in a standing position and involves the lifting and turning of the magazine (weighing 35 pounds when completed). Resident inspector and associate must be able to give oral orders and hear conversation, but under inspectors could be deaf or mutes. Environment is protected; there are no obvious hazards. Loss of one eye, one leg, one arm, compensated heart disease, moderate hypertension, hernia supported by a truss, or arrested tuberculosis would not be disqualifying.

Naval Inspector, plastic (all grades): Formica Co., Cincinnati, Ohio.

Office of Inspector of Naval Material, Cincinnati, Ohio.

Under inspectors could be deaf or deaf mutes. Employee inspects small fabricated parts (plastic material) which are usually light in weight. Occasionally, he may be called upon to inspect plastic sheet, 36 x 42 inches, which may weigh about 201 pounds. Work is light and under proper conditions could be done sitting. Working conditions at this plant involve exposure to dust, noise and formalin odor. Under proper conditions handicapped person possessing one good eye and one fairly useful upper extremity could do the work required.

Naval Inspector, pontoons, Shuey Bros. Cast Construction Co., Cincinnati, Ohio.

Office of Inspector of Naval Material, Cincinnati, Ohio.

Employee inspects pontoons fabricated of steel about 3 x 4 x 7 feet. Work primarily, is visual inspection, and performed in semi-outdoor conditions. It involves walking and prolonged standing where structural steel construction work is being done. Hearing should be acute enough to hear signals. Little actual manual work is required. Occasionally, the inspector is called upon to mount rubber mail ladders to observe pressure tests. He also climbs into or onto railroad cars to inspect the loading of the pontoons. One armed person should be capable of performing the job but two good legs are required.

Naval Inspector, pyrotechnics, Unexcelled Products Co., Reading, Ohio.

Office of Inspector of Naval Material, Cincinnati, Ohio.

Duties involve inspection of component parts, fabrication, and the testing of fire flares and other types of pyrotechnical products. Work is not arduous and is primarily visual inspection but the hazards are rather serious, and fires and explosions occur. These may jeopardize life, limb and sight; therefore, binocular vision should be required. As special movement may be needed, good functioning lower extremities are essential; moderate hypertension and compensated heart disease would be hazardous; hernia, supported by a truss, or the loss of one hand or arm would not disqualify.

Naval Inspector, steel (all grades): Newport Mills Co., Newport, Ky.

Office of Inspector of Naval Material, Cincinnati, Ohio.

Duties include inspection of sheet and galvanized steel and observation of various chemical and physical tests. Inspection, primarily visual, both of the product and above tests. Although the use of a micrometer in gaging thickness is involved, a one-handed person could do this procedure. Plant is vented-open and is therefore cold in winter and rather hot in the summer. No unusual hazards exist except those due to overhead cranes; hearing must, therefore, be good enough to perceive the warning signals. Loss of one arm or one hand, compensated heart disease, moderate hypertension, hernia supported by a truss, minor skeletal defects, and color-blindness would not disqualify.

Naval Inspector, targets, Warner Industries, Inc., Cincinnati, Ohio.

Office of Inspector of Naval Material, Cincinnati, Ohio.

Employee inspects two-targets made of rope, metal, and rayon. In this particular plant work involves walking up and down steep steps. Arrested tuberculosis, hernia supported by a truss, loss of one eye, loss of one arm or moderate hypertension would not disqualify. Hearing, with or without aids, should be good enough to permit conversation with contractor's representatives.

Naval Inspector, valves, Lankensheimer Co., Cincinnati, Ohio.

Officer of Inspector of Naval Material, Cincinnati, Ohio.

Employee inspects valves, varying in size from a few ounces to about 85 pounds. Inspection, primarily visual, although occasionally some grasping and twisting is involved. Inspector observes various physical, chemical and laboratory tests made by the contractor. Work in light; numerous physical disabilities would be unacceptable (one eye, loss of arm, moderate hypertension compensated heart disease, and impaired hearing (although applicant should hear well enough to carry on a conversation). In this plant walking and climbing steps are required.

Operator, jackhammer.

United States Engineer, Sayler Park, Cincinnati, Ohio.

This position involves arduous duty. The short and physical exertion would be hazardous to a person with headed or arrested tuberculosis. Minor deformities of hands should not be disqualifying, providing the grip was good.

Operator, Jigster coal unloader.

Port Benjamin Harrison, Ind.

This position involves the operation of both coal unloaders and coal conveyor; the latter are self-propelling, but the former are heavy and are manually moved into position. Coal cars may have to be pinched-barred into new positions, and electric jumulators may be required in order to separate them, therefore the work is frequently arduous. Both hands must be functionally good to operate levera. Good distant vision is preferred in both eyes, and hearing should be at least 15/30 in one ear. A functionally good artificial lower limb could be approved.

Operator, locomotive crane.

Wright Field, Dayton, Ohio.

This position is a combination of fireman, engineer, and crane operator. Hearing must be normal in both ears. Recognition of heat-saturated colors is required. Employee must be well proportioned in height and weight, and agility is required. Lower extremities must be in good condition, since the job involves prolonged standing and the use of the feet and legs in the operation of pedals. Both hands should possess good functional grip for the operation of the various levers, and the primary hand should be functionally good.

Operator, pump.

Jeffersonville Quartermaster Depot, Jeffersonville, Ind.

This work ordinarily is not arduous and consists primarily of watching the operation of the machines. This position is a combination of gas-welder and electrical-equipment operator. Maintenance and repair of the equipment is part of the job, and this repair work may entail arduous duty, some of which may be in elevated places and in cramped quarters. Hands, arms, legs, torso, and fingers must be in good functional condition. Normal basic color vision is preferred, but monocular vision would suffice.

Operator, tractor.

United States Engineer, Sayler Park, Cincinnati, Ohio.

The employee must have good functional use of his extremities and torso and must be capable of rendering the fullness that frequently accompanies work of this nature. Vision should be at least 20/30 in one eye and 20/100 in the other, glasses permitted. Heat-saturated colors must be recognized. Deafness, if supported by a test, should not disqualify. Nervous disorders and psychic instability would be disqualifying.

Overseer, plant, electroplating.

Mirror Plant, Engineer Department, Cincinnati, Ohio.

This position is primarily administrative in type and requires little in the way of physical capability. While toxic metallic elements are used in the plant, there is little contact that this employee has with these substances.

Packer and sealer picker.

Mirror Plant, Engineer Department, Cincinnati, Ohio.

The employee must be capable of performing work involving hands, arms, torso. Function must be relatively normal in all extremities. Some jobs may require climbing or crawling upon objects being crated, but usually the work is done on the ground level.

Patternmaker.

Patternmaker, senior.

Wright Field, Dayton, Ohio.

The requirements of this position may vary greatly with the type of work performed.

Photographic reproducer's helper.

Wright Field, Dayton, Ohio.

This work is not arduous in character, but it does require manual dexterity, and therefore both hands should be functionally good. The loss of one lower extremity should not disqualify if an artificial limb is worn. A history of allergy must be considered, since contact with various chemicals used may cause a contact dermatitis.

Publisher.

Mirror Plant, Engineer Department, Cincinnati, Ohio.

(See additional sentence for Buffer.)

Refrigerator, heating control.

Fort Benjamin Harrison, Ind.

(See additional sentence for Repairman, refrigeration control.)

Repairman, junior stoker.

Fort Benjamin Harrison, Ind.

The duties include bench and stoker work and are frequently arduous, requiring the handling of parts weighing from 100 to 300 pounds. The latter are usually handled by bars or jacks, the former by hand. Good hand function in both hands and good finger function in the primary hand are required. Work is practically always at ground-floor or pit level but may involve working in boiler, firebox, or other restricted places; therefore, legs and torso must be in good functional condition. Normal color vision required.

Repairman, mobile machine.

Wright Field, Dayton, Ohio.

This position involves working on all types of mobile machinery, such as trucks, tractors, enterpiliars, etc., and involves arduous labor. Torso, arms, legs, fingers, and hands must be in good functional condition. There is little or no bench work connected with this position. Vision should be that for motor-vehicle operation, since employees frequently have to drive vehicles. A history of allergy should be investigated, for grease and solvents are used which may cause trade dermatitis.

Repairman, refrigeration control.

Fort Benjamin Harrison, Ind.

This work involves maintenance and repair of small heating and refrigeration units. Work is not arduous but requires agility and free usage of hands, arms, torso, and legs, since employee may have to work in, under, over, and around machines and repair evaporators which are above floor level. Fine finger and hand movements are required. Normal color vision not essential. Hazard from glass heatlght.

Repairman, olive.

Jeffersonville Quartermaster Depot, Jeffersonville, Ind.

This work is light in character and usually does not require lifting over 20 pounds. Prone to bending is required. An artificial lower limb would be acceptable if functionally good. Both hands and arms should be functionally good. Fingers are encountered during the adjustment of burners.

Stellmendor.

Jeffersonville Quartermaster Depot, Jeffersonville, Ind.

(See additional sentence for Harnessmaker.)

Sheet-metal worker, maintenance.

Jeffersonville Quartermaster Depot, Jeffersonville, Ind.

The employee must be able to work above the ground on ladders, trestles, catwalks, etc., and therefore hands, arms, torso, and legs must be in good functional condition. Some of the work may be bench work, but the majority of the work is installation and repair. Agility is of prime importance. Small loads well supported by a truss need not be disqualifying. Binocular vision is preferred, due to the hazards.

Storekeeper, heavy duty.

Storekeeper, light duty.

Wright Field, Dayton, Ohio.

Storekeeper duties are primarily supervisory or clerical in character. The under and assistant positions usually involve the actual work. The nature of the duties is dependent upon the establishment and the material handled. Machine-shop stockrooms may have stock to be handled by one man. The handling of alloys requires normal basic color perception, alloys are marked by colors. For the supervisory positions, compensated heart disease, moderate hypertension, and varicosities should not disqualify.

Storekeeper, motor parts specialist.

Fort Knox, Ky.

Parts handled vary greatly in size and weight, but the heavy objects are usually big blocks, crates, etc. Some women could be utilized in this work.
Webler, electric.

United States Engineer, Saylor Park, Cincinnati, Ohio.

The duties of the position may vary extensively in physical requirements, depending entirely upon the type of work to be done. Spot welding of small parts is done on the ground level, while the repairing of bulk of apparatus is working off of the ground, which may require agility, good muscular strength, and balance.

PROVISIONS UNRESTRICTED DURING HEAVY WORK**Armorer.**

Rock Island Arsenal, Rock Island, Ill.

When work is confined to the lighter gun, an individual receiving pneumothorax or collapse therapy could perform the duties without being an undue risk.

Charwoman.

Main Post Office Building, Detroit, Mich.

Good vision in one eye only is required. Three, four, or five fingers missing in secondary hand, maimed middle, or limited motion of elbow arm painful. Deafness in one or both ears unacceptable.

Crossed laborer.

Post Wayne, Detroit, Mich.

Although most jobs in this classification are very arduous, there are a number of positions which require light duties and which can be performed by women.

Clerk stock room.

Post Office Building, Milwaukee, Wis.

One hand intact is sufficient to perform duties.

Cook.**Cook, ribs.****Cook, fish.**

Station Hospital, Fort Sheridan, Ill.

An employee receiving artificial pneumothorax for tuberculosis should not be employed as a cook, even though he has been considered an arrested case.

Caretaker.

Rock Island Arsenal, Rock Island, Ill.

In the making of the smaller cases women could do the work. However, when the cases are large and extremely heavy the work is too strenuous for women.

Dishpan.

United States Marine Hospital, Chicago, Ill.

An employee receiving artificial pneumothorax for tuberculosis should not be employed as a dishpan, even though he has been considered an arrested case.

Electrician's helper.

Main Post Office Building, Detroit, Mich.

Post Office, Milwaukee, Wis.

Employee should have good vision in one eye. Employees with only hand could be utilized as helper in cleaning and handling parts in performing regular repair work. Limited motion of elbow, wrist, and fingers acceptable but it is not necessary that shoulder and hip joints have free motion. Moderate hypertension and arrested tuberculosis not disqualifying.

Engineer and superintendent of construction.

Camp McCoy, Wis.

The duties of this employee consist of supervision of a large number of employees performing diversified duties in the operation, maintenance, and protection of buildings, grounds, and utilities.

Examiner, textile.

Construction and Equipment Repair Shop, Building 43, Fort Sheridan, Ill.

Much of the work is similar to that of a junior packer.

Fireman.

United States Marine Hospital, Chicago, Ill.

The duties of this position consist of performing mechanical custodial work such as firing and maintaining steam pressure of high-pressure boilers, clean-

hog fires and removing ashes, lubricating pumps, and making minor repairs to boilers when replaced. The duties are carried out under immediate supervision.

Guard.

Roosevelt Park Post Office, Detroit, Mich.
Main Post Office Building, Detroit, Mich.

Good vision and hearing required for regular guard work. For some stations, guard with good vision in one eye would be acceptable (stair-guard, engine-room entrance). Persons with third, fourth, and fifth fingers missing could be utilized.

Guard, captain and lieutenant.

New Post Office Building, Chicago, Ill.

Employs muted voice and hearing to detect presence of unauthorized persons in any of the rooms in the building. Persons with arrested tuberculosis could be employed at sedentary positions at entrance of building.

Inspector, heavy duty.

Detroit Ordnance District, Detroit, Mich. (Ford plant).

The position of Inspector, heavy duty, necessitates an extremely wide degree of physical exertion, from climbing into and under tanks to picking up and examining extremely heavy objects. Deafness in one or both ears, either partial or complete, will not interfere with the proper performance of duties in most cases, although it would not be advisable to employ an individual who is totally deaf, because it is usually necessary for the inspector to converse with others. However, complete deafness in one ear should not be disqualifying. The inspectors should be agile, since it is necessary for them to climb in and out of tanks and motor vehicles.

Inspector, heavy duty.

United States Naval Ordnance Plant, Center Line, Mich. (Hudson).

(See addendum sentence for Inspector, heavy duty, Detroit, Mich. (Ford plant).)

Inspector, heavy duty.

Motor Transport Procurement, Detroit, Mich. (Dodge).

(See addendum sentence for Inspector, heavy duty, Detroit, Mich. (Ford plant).)

Inspector, heavy duty.

Air Corps Procurement, District, Detroit, Mich.

The position of Inspector, heavy duty, necessitates an extremely wide degree of physical exertion, from climbing into and under airplanes to picking up and examining extremely heavy objects. Deafness in one or both ears, either partial or complete, will not interfere with the proper performance of duties in most cases, although it would not be advisable to employ an individual who is totally deaf, because it is usually necessary for the inspector to converse with others. However, complete deafness in one ear should not be disqualifying. The inspectors should be agile, since it is necessary for them to climb in and out of airplanes.

Inspector, light duty.

United States Naval Ordnance Plant, Center Line, Mich. (Hudson).

(See addendum sentence for Inspector, light duty, Detroit, Mich. (Ford plant).)

Inspector, light duty.

Detroit Ordnance District, Detroit, Mich. (Ford plant).

The employee can accomplish his duties with one hand, one arm, or one leg. Flexibility of the body trunk and free motion of all the joints is not necessary. Deafness in one or both ears, either partial or complete, will not interfere with the proper performance of duties in most cases, although it would not be advisable to employ an individual who is totally deaf, because it is usually necessary for the inspector to converse with others. However, complete deafness in one ear should not be disqualifying. Persons with moderate hypertension under medical supervision and organic heart disease, fully compensated, are capable of performing the duties of inspector. Individuals who have arrested tuberculosis are not an undue risk in the position of inspector. There are many places where they can perform their duties while receiving pneumothorax or other types of collapse therapy, as, for example, where visual inspection alone is performed.

Inspector, light duty.

Air Corps Procurement District, Detroit, Mich.

The employee can accomplish his duties with one hand, one arm, or one leg. Flexibility of the body trunk and free motion of all the joints is not

necessary. Deafness in one or both ears, either partial or complete, will not interfere with the proper performance of duties in most cases, although it would not be advisable to employ an individual who is totally deaf, because it is usually necessary for the inspector to converse with others. However, complete deafness in one ear should not be disqualifying. Persons with moderate hypertension under medical supervision and organic heart disease, fully compensated, are capable of performing the duties of Inspectors. Individuals who have arrested tuberculosis are not at undue risk in the position of Inspector, and there are many places where they can perform their duties while receiving pneumothorax or other types of collapse therapy, as, for example, where visual inspection alone is performed.

Inspector, light duty.

Motor Transport Procurement, Detroit, Mich.

(See addendum sentence for Inspector, light duty, Detroit, Mich. (Ford plant).)

Janitor.

Post Office Building, Milwaukee, Wis.

Persons with vision in one eye or one hand intact are acceptable. Limited motion in one arm or leg, moderate hypertension and deafness in one ear, acceptable.

Janitor and Janitor forumum.

New Post Office Building, Chicago, Ill.

Foreman of janitors must have fully functioning lower limbs. Deafness of one ear and deformity of one arm, acceptable.

Laborer.

Main Post Office Building, Detroit, Mich.

Roosevelt Park Post Office, Detroit, Mich.

Good vision in one eye is sufficient for performing the duties. Persons with deformity of one lower extremity, with garters of third, fourth, and fifth fingers on one hand, deafness in one or both ears if compatible with satisfactory performance of duties, may be utilized. Heavy work must be done by persons possessing full strength.

Laborer, general.

Main Post Office Building, Detroit, Mich.

Good vision in one eye, arthritic lower limb, loss of one hand, limited motion of one arm or elbow, wrist, and fingers, acceptable.

Laborer, unskilled.

United States Marine Hospital, Chicago, Ill.

This laborer performs a number of diversified duties in which little or no training is required, such as moving heavy articles, loading and unloading trucks, maintenance of grounds, shoveling snow, welding, whitewashing, and assisting unskilled or skilled workmen (carpenters, plumbers, etc.).

Lampist.

Main Post Office Building, Detroit, Mich.

New Post Office Building, Chicago, Ill.

Post Office Building, Milwaukee, Wis.

Roosevelt Park Post Office, Detroit, Mich.

Good vision in one eye, limited motion of one arm or elbow, wrist, and fingers are acceptable.

Lander, mail truck.

Roosevelt Park Post Office, Detroit, Mich.

Employee should have good vision in one eye. Limited motion of one arm or of elbow, wrist or fingers are acceptable. Hearing in only one ear is required.

Mechanist, travelling, artillery maintenance.

Rock Island Arsenal, Rock Island, Ill.

Work on the light guns could be performed by an individual receiving pneumothorax treatment.

Marble cleaner.

Main Post Office Building, Detroit, Mich.

Good vision in only one eye is required and one hand intact, sufficient to do polishing work, myxodes of one knee and ankle are acceptable. Deafness in one or both ears will not handicap employee.

Marble polisher.

New Post Office Building, Chicago, Ill.

Employees must be free from cardio-vascular ailments. Employee works on extension ladder some 30 or 40 feet above floor. For work at floor or stair level, persons with one eye or hearing defects are acceptable.

Mechanics, elevator.

Post Office Building, Milwaukee, Wis.

Employee must have full use of both arms, hands and lower extremities in order to perform the duties.

Mechanics, letter boxes.

Post Office Building, Milwaukee, Wis.

Persons with moderate hypertension, handicaps of lower extremities, loss of fingers on one hand, deafness in one ear or both, and vision of one eye are acceptable.

Mechanic, mail-box.

Roosevelt Park Post Office, Detroit, Mich.

Good vision in one eye only is required; fourth and fifth fingers may be missing on one hand; handicaps of lower extremities, limited motion of one arm or elbow, wrist and fingers and defective hearing are acceptable. Height and weight have no bearing on the duties of this position.

Mechanic, scales.

Roosevelt Park Post Office, Detroit, Mich.

Third, fourth, and fifth fingers may be missing on one hand; loss of one leg with satisfactory prosthesis, moderate hypertension, and arrested tuberculosis are acceptable.

Mechanic, typewriter.

Roosevelt Park Post Office, Detroit, Mich.

Third, fourth, and fifth fingers may be missing on one hand; loss of one leg with unsatisfactory prostheses, deformity of lower extremity, limited motion of one arm, elbow, wrist, and fingers are acceptable.

Mechanic, ventilating.

Main Post Office Building, Detroit, Mich.

New Post Office Building, Chicago, Ill.

This position requires full physical fitness.

Other.

New Post Office Building, Chicago, Ill.

Other does considerable climbing upon elevators and ladders to service conveyor system. Sense of smell and hearing are important in detecting uncleaned disorders due to lack of ventilation in buildings.

Other.

Post Office Building, Milwaukee, Wis.

Disability of one leg and amputation of 3 or 4 fingers of either hand are unacceptable.

Operator, elevator.

Rock Island Arsenal, Rock Island, Ill.

One elevator operator is employed who has one arm. He performs the job equally.

Operator, engineer, assistant.

New Post Office Building, Chicago, Ill.

Full physical fitness is required.

Operator, freight elevator.

Main Post Office Building, Detroit, Mich.

Roosevelt Park Post Office, Detroit, Mich.

Limited motion of one arm or elbow, wrist, and fingers are acceptable. Employee occasionally works in narrow spaces, making obesity disqualifying for this position.

Painter, junior.

Construction and Equipment Repair Shop, Building 43, Fort Sheridan, Ill.

At times this position involves extremely heavy work, perhaps too heavy for women.

Plumber.

Roosevelt Park Post Office, Detroit, Mich.

Limited motion of one arm or elbow, wrist, and fingers is acceptable; fourth and fifth fingers missing on one hand is acceptable. Ground helpers with ankylosis of knee and ankle are acceptable.

Sorter, mail.

Main Post Office Building, Detroit, Mich.

Good vision in one eye is acceptable; third, fourth, and fifth fingers may be missing on one hand, ankylosis of knee and ankle, acceptable. Deafness in one or both ears if compatible with satisfactory performance of duties is accepted.

Sorter, mail bags.

Roosevelt Park Post Office, Detroit, Mich.

Good vision in one eye is acceptable. Limited motion of one arm or elbow and wrist is acceptable. Defects in other or both arms compatible with satisfactory performance of duties is acceptable.

Typist, telephone.

Main Post Office Building, Detroit, Mich.

Blindness in both eyes, loss of one leg, or deformity of lower extremity are unacceptable.

ENTRANCE UNITED STATES CIVIL SERVICE REGULATIONS**Arm welder, ore.**

Cargill Co., Savage, Minn.

The duties of this position could be performed by a deaf mute and person with one intact upper extremity with good grasping power in the secondary hand.

Arm welder, hot.

Cargill Co., Savage, Minn.

The employee works with a large, flat plate of steel and works on his knee for long periods of time. He interchanges positions with ore welder. Women should be rugged. Deaf mutes are unacceptable for this position.

Bamboiler.

Twin City Ordnance Plant, Fisher Cartridge Co., Minneapolis, Minn.

The duties of this position can be performed satisfactorily by the blind. The work is brought to a table and taken away when finished. The employee is seated at a table. The duties consist of placing small packages of cartridges in separate compartments of a box and then folding the top of the canvas belt over the filled spaces.

Burner, acetylene.

Cargill Co., Savage, Minn.

Deaf mutes could be employed at nearly low temperature. Since none of the work is done outside, employees are exposed to adverse weather condition at home.

Carpenter.

Ordnance Service Command Shop, Alton Ben Field, Omaha, Neb.
Post Office, Omaha, Nebr.

At the time of this survey an employee with an amputation of one upper extremity was performing the duties of this position satisfactorily. However, only a few such persons can be made to each group if efficiency is to be maintained.

Carrier, city and substitute.

Post Office, Fremont, Nebr.

A one-handed man with satisfactory prosthesis could be fitted into this job but it would entail some modification of present duties.

Carriole, foreman.

Post Office, St. Paul, Minn.

An employee with an artificial lower extremity could perform the duties of the position satisfactorily provided he were single and had required good function of prosthetic appliance.

Charwoman.

Post Office, St. Paul, Minn.

U. S. Engineers Derrick Hand 707, St. Paul, Minn.

This job consists of cleaning test rooms which involves considerable kneeling and bending.

Charwoman.

Post Office, Minneapolis, Minn.

Post Office, St. Paul, Minn.

In most of these positions a person with one hand or one foot, with satisfactory prostheses could perform the duties. Deaf mutes could perform the duties.

Cheekor.

Army Air Force Technical School, Bronx Falls, N. Y.

Position requires both near and far vision in one eye. Position is suitable for deaf mutes.

Chipper.

Cargill Co., Savage, Minn.

This employee helps out imperfect welding jobs. Noise is excessive. Deaf mutes would be ideal for this work, since the environment is noisy. Directions are given by signs. Some chippers work outside and are exposed to variable weather changes.

Classifier.

Army Air Force Technical School, Sioux Falls, S. Dak.

Classifier must be able to distinguish basic colors.

Clerk.

Post Office, West Point, Neb.

Duties include typing and meeting the public. Color perception is necessary to determine denomination of stamps. An employee with deafness in one ear but good hearing in the other would be satisfactory.

Clerk, undetailed.

Post Office, Minneapolis, Minn.

This employee operates a motor vehicle occasionally, otherwise the duties do not require vision in both eyes or hearing.

Clerk, drafting.

Post Office, Burlington, Iowa.

A one-handed person could be trained for this position. Dust from the mill creates an undue hazard for a person with arrested tuberculosis. Deaf mutes could be utilized.

Clerk, stock, junior.

Post Office, Minneapolis, Minn.

Besides work of stock clerk, this employee repairs blinds and helps move furniture.

Clerk, under (auto parts).

Army Post, Fort Crook, Neb.

This employee does the work of a parts man in addition to his typing duties.

Clothingman and chief.

Post Office, St. Paul, Minn.

Tends hoppers in hopper room. While it is not necessary that the employee be well proportioned, extremely short or obese employees would not be satisfactory.

Circulator.

Post Office, Omaha, Neb.

The duties of this position require that employee have practically all his faculties.

Compressor (compressed air).

Cargill Co., Savage, Minn.

This employee grinds edges and fits large steel plates. Deaf mutes could perform the duties of this job satisfactorily. Some of this work is done outdoors in temperatures 10° below zero.

Guard.

Cargill Co., Savage, Minn.

An employee with one arm could perform this work.

Guard (escort).

Army Air Force Depot, Des Moines, Iowa.

The guard is expected, in order to justify the employment of a full-time employee, to assume additional duties, such as telephone operator, typist, or clerk, as assigned by the superior officer.

Guard (tower watchman).

Cargill Co., Savage, Minn.

An employee with both legs amputated and satisfactory prosthesis could perform the duties of this position if provision were made for ascent and descent of the steps to the tower.

Guard.

Post Office, Minneapolis, Minn.

Post Office, Omaha, Neb.

Guard must be physically able, if necessary, to perform any police duty function. Some guards acting as watchmen could have disabilities other than those listed, but at present the positions are interchangeable.

Guard, checker.**Guard, door watchman.**

Guard, fire prevention.

Post Office, St. Paul, Minn.

Duties of these positions could be performed by employees with one eye, one arm, and one leg. Full motion in all joints is not necessary. Moderate blood pressure, arrested tuberculosis, or disproportionately height and weight would not constitute undue hazards. Keen hearing would not be necessary but conversation should be easily heard. At present all guards interchange duties, and it is necessary to maintain the higher guard physical qualifications for this particular position.

Bailiffman.

Army Induction Center, Camp Dodge, Iowa.

The employee performs various duties around the office similar to those generally assigned to messengers.

Inspector, assistant, Naval.

Cargill Co., Savage, Minn.

The assistant inspector (Naval) inspects materials for the service of the ship, such as gauges, valves, engines, etc., as they are unloaded. The duties are arduous and involve working under adverse weather conditions, lifting of very heavy materials, and inspection work that is moderately difficult at subcontractor plants because of the environment.

Inspector, hull.

Cargill Co., Savage, Minn.

Much of the hull inspector's work is performed under varying weather conditions. Tubercolosis patients should be assigned carefully.

Instructor, welding.

Cargill Co., Savage, Minn.

Under favorable conditions the welding instructors need only one leg with satisfactory prosthesis. Most instructions are given in actual work. Deaf mutes could perform the duties of the position.

Jailer.

Army Air Force Technical School, Sioux City, S. Dak.

This job is suitable for deaf mutes.

Janitor.

Army Air Force Technical School, Sioux City, S. Dak.

Duties are similar to those of jailor, except that the janitor does more general cleaning.

Laborer.

Post Office, Minneapolis, Minn.

Post Office, St. Paul, Minn.

Laborers interchange duties according to the demands of the work at hand. They frequently work in a dusty atmosphere; their duties are arduous and include moving furniture.

Laborer.

Post Office, Omaha, Nebr.

At the present time laborers interchange positions and are shifted around. However, arrangements could be made for designating handicapped persons to specific duties and thus utilizing persons with one eye, arrested tuberculosis, moderate hypertension, and defective hearing.

Laborer, furnace.

Post Office, Omaha, Nebr.

The duties of this position require that laborers possess practically all their faculties, but the foreman of laborers could perform the duties satisfactorily with one eye.

Marble polisher.

Post Office, Minneapolis, Minn.

A deaf mute could be utilized in this position.

Marble polisher.

Post Office, St. Paul, Minn.

In addition to his duties as a marble polisher it is necessary for this employee to repair marble and perform the duties of plasterer.

Mechanic, automobile, gasoline and carburetor.

Motor Ordnance Service Command Shop, Ak-Sar-Ben Field, Omaha, Nebr.

This work is done at a bench. The operator alternately stands and sits.

Mechanic, cancelling-machine.

Post Office, St. Paul, Minn.

Selected cases of organic heart disease (fully compensated) could be considered for this position.

Mechanic, senior and typewriter.

Post Office, Minneapolis, Minn.

Mechanic operates a motor vehicle in the performance of his duties.

Mechanic helper (gas pump operator).

Army Post, Fort Crook, Nebr.

Employee frequently goes in and out of building to pump station.

Messenger, special delivery.

Post Office, West Point, Nebr.

Post Office, Burlington, Iowa.

This employee often substitutes for either city or rural carrier, and therefore should also meet physical qualifications for such positions.

Operator, telephone.

Post Office, Omaha, Nebr.

Persons with both legs missing could perform duties of this position.

Operator, telephone, regular, temporary, relief.

Post Office, St. Paul, Minn.

Substitute for persons with amputation of both legs.

Packer.

Army Post, Fort Crook, Nebr.

Employee packs material into boxes for shipment; not heavy work.

Packer.

Ordnance, Des Moines, Iowa.

The duties of this position consist of packing cartridges. Certain modifications must be made before considering employment of the blind.

Painter.

Army Air Force Technical School, Sioux Falls, S. Dak.

Post Office, St. Paul, Minn.

With selective placement persons with amputation of one lower extremity could be utilized.

Painter, foreman.

Painter, helper.

Army Air Force Technical School, Sioux Falls, S. Dak.

(See indendum sentence for Painter, Army Air Force Technical School, Sioux Falls.)

Painter, senior.

Army Air Force Technical School, Sioux Falls, S. Dak.

Ordnance Service Command Shop, Ak-Sar-Ben Field, Omaha, Nebr.

A person with one amputated upper extremity could be utilized.

Painter, virgin.

Ordnance Service Command Shop, Ak-Sar-Ben Field, Omaha, Nebr.

A person with one hand, having satisfactory prosthesis, could perform duties of this position.

Parteman (auto).

Army Post, Fort Crook, Nebr.

Employee receives auto parts, checks against invoices, checks outs, and handles all parts.

Plate bender.

Cargill Co., Savage, Minn.

A rugged woman could handle the duties of this position. The work is performed in a noisy environment and normal hearing is not necessary. Plate benders bend large plates by machinery to conform to a given pattern.

Plate-bender helper.

Cargill Co., Savage, Minn.

The plate-bender helper lifts steel plates by means of chain hoists, but the heavy tool used in bending it is moved by hand, which entails heavy lifting. It is desirable that employee bear fairly well.

Powder monkey.

Army Induction Center, Camp Dodge, Iowa.

The powder monkey drills holes into which powder is packed. There is apparently very little danger connected with this job if the employee is mentally alert.

Rail-truck operator (Diesel-powered).

Cargill Co., Savage, Minn.

The operator moves objects on rails with his truck. It is mostly outside work and the operator cannot remain in cab at all times.

Reclaimer, laundry.

Army Air Force Technical School, Sioux Falls, S. Dak.

A claimant receiver for incoming bundles. Duties are supervisory in nature and similar to those of checker.

Recorder of welding records.

Cargill Co., Savage, Minn.

The duties are mostly of a clerical nature. When the employee is not busy at regular duties, messenger or odd light jobs are performed.

Repairman, shoe, junior and senior.

Army Air Force Technical School, Sioux Falls, S. Dak.

Hépaumur removes soles and heels from old shoes. Position is suitable for a blind person. Leaf mites unacceptable.

Ship helper.

U. S. Engineers, Derrick Boat 767, St. Paul, Minn.

Arts in a watchroom.

Shipper (laundry).

Army Air Force Technical School, Sioux Falls, S. Dak.

Position is suitable for deaf mutes.

Steam filter.**Steam filter, foreman.****Steam filter helper.****Steam filter, junior and senior.**

Army Air Force Technical School, Sioux Falls, S. Dak.

A one legged person with satisfactory prosthesis could do this work.

Storekeeper.

Army Induction Center, Camp Dodge, Iowa.

The duties of this employee include unloading supplies. It is considered undesirable to employ a person with an affected case of tuberculosis because of the considerable amount of dust encountered during unloading operations.

Stonekeeper, under (auto parts).

Army Post, Fort Crook, Neb.

Employs parts and identifies automotive small parts that are disassembled. Person hard of hearing, or deaf mute would be acceptable.

Template maker, wooden pattern.

Cargill Co., Savage, Minn.

The template maker works on the knee and twists moderately ill and raw wood, from which templates or patterns are made. Selection of women for this work should be carefully considered.

Test welder examiner.

Cargill Co., Savage, Minn.

(See addendum sentence for testructor, webbing.)

Upholsterer and helper.

Ordnance Service Command Shop, Alton Ben Field, Omaha, Neb.

This position entails working very heavy material such as carpeting.

Welder, arc, erect and flat.

Cargill Co., Savage, Minn.

The duties of welder, arc, erect and flat, could be performed by deaf mutes. The duties of this position are now being performed by an employee with marked illegibility of one arm.

Wrapper.

Army Air Force Technical School, Sioux Falls, S. Dak.

Employee wraps bundles of laundry. Position is suitable for a blind person.

NINTH INTERSTATE CIVIL SERVICE REGION**Automobile operator, chauffeur.**

Fort Leonard Wood, Mo.

No heavy manual labor is involved.

Cabinetmaker.

Post Office, Oklahoma City, Okla.

Post Office, St. Louis, Mo.

Employee repairs furniture, constructs furniture, and builds partitions.

Carpenter.**Carpenter helper.**

Post Office, Kansas City, Mo.

Post Office, St. Louis, Mo.

A repair and maintenance job.

Carrier, rural.

Hulstend, Kans.
Yukon, Okla.

Carrier delivers mail and packages via motor vehicles to rural homes; sufficient driving ability necessary due to climatic conditions; operates light trailers for mud and snow (Yukon); operates Model T Fords for mud and snow (Hulstend).

Carrier, substitute.

Post Office, St. Louis, Mo.

Employee carries and distributes mail. Routes are divided into small distances; mail trucks leave mail at various points along route; load carried may be regulated.

Carrier, substitute, parcel-post.

Post Office, Oklahoma City, Okla.

Employee drives a truck; no zone limitations; this is considered a preferred position and is given to those who develop handicaps in the service. Carrier handles all parcel post packages weighing 4 pounds or over.

Carrier, village.

Post Office, Hulstend, Kans.

Post Office, Yukon, Okla.

Employee carries mail on foot to residential and business sections twice daily.

Charwoman.

Post Office, St. Louis, Mo.

Charwoman assists laborer in the general care, maintenance, and minor repairs of building, grounds, and equipment, including heating plant; mops, sweeps, cleans ceilings and walls, and polishes.

Charwoman.

Post Office, Kansas City, Mo.

Post Office, Oklahoma City, Okla.

Post Office, St. Louis, Mo.

Charwoman, head.

Post Office, Kansas City, Mo.

Post Office, Oklahoma City, Okla.

Post Office, St. Louis, Mo.

Employee supervises and works with corps of charwomen. Duties are more supervisory than manual.

Cheekor (parcel-post).

St. Louis Medical Depot, St. Louis, Mo.

Employee checks parcel post packages as to contents, etc.

Cheekor (weighting).

St. Louis Medical Depot, St. Louis, Mo.

Employee weighs boxes after packing (5 to 300 pounds); straps boxes; places boxes on scales; acts as packer or laborer as needed. Arduous duties.

Chief, records (motor vehicle service).

Post Office, Kansas City, Mo.

Post Office, St. Louis, Mo.

Clerical and office duties involved.

Chief, supplies (motor vehicle service).

Post Office, Kansas City, Mo.

Post Office, St. Louis, Mo.

Employee unloads requirements, receives, stores, and issues material.

Cleaner, windows.

Post Office, Kansas City, Mo.

Post Office, Oklahoma City, Okla.

Post Office, St. Louis, Mo.

Cleans high glass, inside and out; uses 30 foot ladders as necessary; cleans sky lights requiring overhead operations; safety belts required; moves furniture as required and similar duties. (Arduous duty.)

Clerk.

Post Office, St. Louis, Mo.

Clerk works under supervision of assistant custodian (desk duty, clerical position).

Clerk (motor vehicle service).

Post Office, Kansas City, Mo.

Post Office, St. Louis, Mo.

Mainly clerical and office duties are involved.

Clerk, assistant, storage.

St. Louis Medley Depot, St. Louis, Mo.

Clerk receives requisitions; maintains back records; handles shipping dates on rush shipments; inspects parcel post shipments from freight; checks and inspects processed papers in warehouse office; records completed parcel post, registered mail, express, freight, and air shipments; answers phone and gives out information.

Clerk, junior.

Post Office, Kansas City, Mo.

Post Office, Oklahoma City, Okla.

Clerical duties.

Clerk, junior, mail.

Post Office, St. Louis, Mo.

Clerk acts as timekeeper, storekeeper, and checker; makes daily schedules for employees of shop.

Clerk, substitute.

Post Office, St. Louis, Mo.

Clerk separates, distributes, and relays mail; operates window service. Duties require good grasping power in handling mail.

Clerk, substitute railway post.

Post Office, St. Louis, Mo.

Employee loads and unloads heavy mail sacks; sorts papers, letters, and parcels under stress of time demands. Long standing involved (8 to 12 hours or more depending on route and lateness of train schedule). Throws mail sack at public where train does not stop and uses mechanical mail catcher to obtain outgoing sacks of mail. Continuous use of arms and for vision involved. This is the most exacting and strenuous of any position heretofore surveyed in the Post Office Department. Employee may be required to use firearms in protecting mail.

Clerk, village.

Post Office, Holdrege, Kas.

Post Office, Yukon, Okla.

Duties consist of receiving and opening mail, sorting, distributing, and handling mail; perform services at C. O. D. atmep, and parcel post windows.

Custodian, assistant.

Post Office, Kansas City, Mo.

Post Office, Oklahoma City, Okla.

Post Office, St. Louis, Mo.

Custodian is responsible for activities of custodial force; repair work, issues, and accounts for supplies; keeps records; most of the duties are desk or clerical.

Custodian, junior assistant.

Post Office, Kansas City, Mo.

(See indemnity sentence for Custodian, assistant.)

Cutter, stencil.

St. Louis Medley Depot, St. Louis, Mo.

Employee cuts stencils for putting address, codes, etc., on packing cases; helps in keeping boxes supplied with boxes, cartons, etc.; also is utilized as laborer in my position when needed.

Dispatcher (motor vehicle service).

Dispatcher, chief (motor vehicle service).

Post Office, Kansas City, Mo.

Post Office, St. Louis, Mo.

Dispatcher supervises assignment of trucks to drivers, mechanics, etc.; notes time of arrival and departure of trucks, and notes general condition of trucks.

Driver, mechanic (motor vehicle service).

Post Office, Kansas City, Mo.

Post Office, St. Louis, Mo.

Employee drives heavy and light trucks; loads, unloads, and verifies sacks.

Driver, truck.

Rehabilitation Project, Altus, Okla.

Truck driver conveys material in truck and moves heavy objects by means of a winch on the truck.

Electrician.

Post Office, Kansas City, Mo.

Post Office, St. Louis, Mo.

Electrician services electrical equipment and works under supervision of chief engineer.

Electroelectric, water coolers.
 Post Office, St. Louis, Mo.
 Employee repairs motors and coolers.

Elevator starter.
 Post Office, Kansas City, Mo.
 Starter directs traffic; operates and tests elevators.

Engineer, assistant (power plant).
 United States Prison, Leavenworth, Kans.
 A color-blind employee may be accepted, since the basic colors red and green can be distinguished on the gage by the employee learning their positions.

Engineman (steam-electric).
 United States Prison, Leavenworth, Kans.
 A color-blind employee may be accepted, since the basic colors red and green can be distinguished on the gage by the employee learning their positions.

Engineman.
 Post Office, Kansas City, Mo.
 Post Office, Oklahoma City, Okla.
 Post Office, St. Louis, Mo.
 Employee is responsible for operation and maintenance of boilers, pumps, motors, refrigeration, elevators, sewer system, etc.; supervises firemen, mechanics, etc. (arduous duty).

Engineman, assistant.
 Post Office, Kansas City, Mo.
 Post Office, Oklahoma City, Okla.
 Post Office, St. Louis, Mo.
 Employee works under supervision of engineman; observes gauges; acts as steamfitter, plumber, and pipe fitter; climbs ladders; uses catwalks; installs radiators; arduous duties require heavy lifting.

Engineman, chief.
 Post Office, Kansas City, Mo.
 Post Office, Oklahoma City, Okla.
 Post Office, St. Louis, Mo.
 Employee is responsible for operation and maintenance of entire mechanism of building and monthly inspections of fire stations.

Fireman, laborer.
 Post Office, St. Louis, Mo.
 Employee does manual work in heating and ventilating plants and assists with general cleaning.

Fireman, marine, oil.
 St. Louis (Mo.) Engineer District, St. Louis, Mo.
 Fireman must be able to distinguish shades of color (furnace fire, red to straw yellow).

Fireman, watchman.
 Post Office, St. Louis, Mo.
 Cotubhanian Reformatory-watchman duties are involved.

Foreman, flatwork.
 United States Prison, Leavenworth, Kans.
 The foreman does most of the repair work on all equipment.

Foreman, butchering, insulation, sole leather and stock fitting department.
 United States Prison, Leavenworth, Kans.
 The workers are selected from the inmates, so the instructor-foreman must be capable of performing all duties. Since the turn-over in men is approximately 80 percent a year, the foreman does much of the actual work.

Foreman, ironing.
 United States Prison, Leavenworth, Kans.
 (See addendum sentence for Foreman, flatwork.)

Foreman, laborers.
 Post Office, St. Louis, Mo.
 Employee plans, lays out, directs, and supervises work of laborers and charwomen; keeps records and inspects.

Foreman, laborers.
 Post Office, Kansas City, Mo.
 Post Office, St. Louis, Mo.
 Employee plans, lays out, directs, and supervises work of laborers and charwomen; keeps records and inspects.

Foreman, large shop.

Post Office, St. Louis, Mo.

He is supervisor of entire shop (active duties).

Foreman, laundry.

United States Prison, Leavenworth, Kans.

(See *abdominal sentence* for Foreman, flatwork.)

Foreman, paving.

United States Prison, Leavenworth, Kans.

(See *abdominal sentence* for Foreman, flatwork.)

Foreman, shop.

Reconstruction Project, Altus, Okla.

This position involves repair of equipment as well as regular foreman supervisory duty in the shop.

Foreman, washroom.

United States Prison, Leavenworth, Kans.

(See *abdominal sentence* for Foreman, flatwork.)

Garnerman driver (Motor Vehicle Service).

Post Office, Kansas City, Mo.

Post Office, St. Louis, Mo.

Employee drives oil, grease, washer, and supplier trucks; drives if necessary, and acts as building janitor.

Guard.

Post Office, Kansas City, Mo.

Employee maintains order, carries firearms, and acts as watchman, holds and oils.

Guard, captain.

Post Office, St. Louis, Mo.

Employee is responsible for guards in main office and in substations, acts as guard and plans schedules, etc.; checks firearms.

Guard, lieutenant.

Post Office, St. Louis, Mo.

Employee superintends guards, arranges schedules and guard duty, and checks firearms; works inside and out.

Inspector.

St. Louis Metal Depot, St. Louis, Mo.

Employee inspects and checks packed boxes on arrival before they are carried to shipping room; checks addressed, etc.; also acts in capacity of packer or laborer as needed. Arduous duties.

Inspector (parcel-post).

St. Louis Metal Depot, St. Louis, Mo.

Employee is responsible for final inspection as to weight, size, labels, condition, etc.

Janitor.

Post Office, Kansas City, Mo.

Post Office, Oklahoma City, Okla.

Post Office, St. Louis, Mo.

Janitor is responsible for maintenance and upkeep of building and grounds; directs work of building personnel; does indoor repair work; keeps and receives supplies; acting as storekeeper; operates five stoves, making keep fire burning as necessary; additional duty of guard supervisor.

Janitor laborer.

Post Office, Oklahoma City, Okla.

Duties include general cleaning, window washing (using safety belt), mopping, moving heavy furniture, monthly polishing, and lampist duties.

Laborer.

St. Louis Metal Depot, St. Louis, Mo.

Employee loads parcel post, freight, express, and air packages; checks bills of lading; packs corners of packages for export, etc.

Laborer.

Post Office, Kansas City, Mo.

Post Office, Oklahoma City, Okla.

Post Office, St. Louis, Mo.

This general manual laborer, assists foreman in care of heating plant; assists gardener, general outside cleaning; inside cleaning such as computers, etc.; lifts loads of 200 pounds and less; removes ice and snow from outside passageways.

Laborer (lode).

St. Louis Medical Depot, St. Louis, Mo.

Employee loads, unloads, and lifts boxes for shipment; assists in strapping, packing, and labeling; encloses to and from destination on boxes; weighs, measures (weight in cubic feet for export, code on export), etc.

Laborer (box supply).

St. Louis Medical Depot, St. Louis, Mo.

Handles, maintains a supply of wooden boxes (light to heavy), unassembled cartons, and other containers in portion of room where supply is accessible to workers who supply the box needs or buys. Work is constant as supply is kept ahead of demand. Material is transported from the carpenter shop and basement storage via hand trucks, skids, and jeeps to elevator and then to floor. Arduous duty.

Laborer (hooking and unhooking).

Post Office, St. Louis, Mo.

Employee loads and unloads carts weighing from 125 pounds to 150 pounds to and from loading platform, truck, and conveyors; dumps contents of carts on tables for mailroom clerks; examines carts for damage; prepares damaged carts for shipping to be repaired; prepares undamaged carts for redistribution.

Laborer (operating section).

St. Louis Medical Depot, St. Louis, Mo.

Employee operates 16 packing aisles with new and used packing boxes consisting of wooden boxes, paper cartons, glove boxes, QM chests, etc.; removes boxes from another floor and from warehouse which is some distance away. Boxes range from light to very heavy.

Laborer (parcel post).

St. Louis Medical Depot, St. Louis, Mo.

Laborer sorts and distributes parcels to aisles separating parcel post packages from freight and express.

Laborer (transportation).

St. Louis Medical Depot, St. Louis, Mo.

Employee uses a transfer to move the different shipments to the transportation department. When necessary he may fill in at other laboring positions. Duties are arduous.

Lumper.

Post Office, Kansas City, Mo.

Post Office, St. Louis, Mo.

Lumps debris ashore, removes lumps, walks electrician and climbs 30 foot ladders when necessary; acts as relief elevator operator.

Mechanic.

Post Office, Kansas City, Mo.

Post Office, St. Louis, Mo.

Duties unknown by job name.

Matron.

Post Office, Kansas City, Mo.

Post Office, St. Louis, Mo.

Employee oversees charwomen and other female employees; assists with office work such as records, etc.; acts as substitute telephone operator.

Mechanic and helper, typewriter.

Post Office, St. Louis, Mo.

Employee repairs typewriters, clerks, etc.; helper is under the supervision of the mechanic.

Mechanic assistant, elevator.

Post Office, Kansas City, Mo.

Post Office, St. Louis, Mo.

The mechanic elevator mechanic.

Mechanic assistant, letter box.

Post Office, St. Louis, Mo.

Employee works under supervision of letter box mechanic; duties same and arduous.

Mechanic, cancelling-machine.

Post Office, St. Louis, Mo.

Mechanic repairs cancelling machines.

Mechanic, chief (motor vehicle service).
 Post Office, Kansas City, Mo.
 Post Office, St. Louis, Mo.
 Employee is responsible for operation of repair shop and the upkeep of vehicles; works with mechanics in necessary.

Mechanic, elevator.
 Post Office, Kansas City, Mo.
 Post Office, St. Louis, Mo.
 A working foreman of mechanics, engaged in installation and maintenance.

Mechanic, foreman.
 Post Office, St. Louis, Mo.
 Supervisor of mechanics, installs when necessary and works under supervision of the foreman of shop.

Mechanic, general (motor vehicle service).
 Post Office, Kansas City, Mo.
 Post Office, St. Louis, Mo.
 Employee performs minor repairs on trucks and equipment; towing; chauffeur to local and distant points.

Mechanic, general, transportation.
 Post Office, Kansas City, Mo.
 Post Office, Oklahoma City, Okla.
 Duties involve those of a general mechanic. On the repair and maintenance of elevators, pumps, boilers, scales, letter boxes, cleaning machines, and water meters; performs minor duties of plating, pipe covering, and painting; acts as helper when necessary and assists carpenter or carpenter, roof repairer, etc. (All skilled mechanic work on routine basis).

Mechanic in charge (motor vehicle service).
 Post Office, St. Louis, Mo.
 Assists chief mechanic in other districts.

Mechanic, letter box.
 Post Office, St. Louis, Mo.
 Performs minor repair of letter box on location, drives truck in making emergency calls (accidents causing mail box damage with exposed mail), carrying new box to location and returning damaged box to building for repair. Boxes are of heavy steel construction. (Arduous duty.)

Mechanic, plumber, elevator.
 Post Office, St. Louis, Mo.
 Mechanic is responsible for installation and maintenance of elevator system.

Mechanic, welder.
 Post Office, St. Louis, Mo.
 Repairs scales, foundations, and safety devices while making calls to establishments; carries kit weighing 100 pounds and over. (Arduous duties.)

Mechanic, stamping and mounting machine.
 Post Office, St. Louis, Mo.
 Employee repairs and maintains in working condition stamping and mounting machines; repairs and tests firearms.

Officer.
 Post Office, St. Louis, Mo.
 Officer drives and oils motors, engines, and elevators.

Officer-patrol.
 Post Office, St. Louis, Mo.
 Employee drives and oils moving conveyances for mail; patrols conveyances for obstructions. (Two miles of moving conveyances in St. Louis Post Office.)

Operator (jeep).
 St. Louis Medical Depot, St. Louis, Mo.
 Employee drives and maintains motor vehicle (jeep) which pushes heavy loads on wheels to elevator shaft; unloads heavy boxes from vehicle. (Arduous duty.)

Operator, elevator.
 St. Louis Medical Depot, St. Louis, Mo.
 Employee operates elevator from there to platform room, pulls down and pushes up elevator doors weighing around 200 pounds; carries boxes and parcels on and off elevator; transports them.

Operator, freight and passenger elevator.

Post Office, Kansas City, Mo.

Post Office, Oklahoma City, Okla.

Post Office, St. Louis, Mo.

Duties involve operating electric or hydraulic passenger or freight elevator. No handling, although employee pushes 2-ton truck off and on elevator (this could be assigned to a laborer).

Operator, telephone.

Post Office, Kansas City, Mo.

Post Office, Oklahoma City, Okla.

Post Office, St. Louis, Mo.

Board duty. It has been noted that operators with partial deafness often hear more readily wearing telephone ear phones than they do without. (None confirmed).

Packay.

St. Louis Medical Depot, St. Louis, Mo.

Handles medical supplies and equipment for domestic and export shipment; packs fragile and moisture-attracted items before packing; responsible for adjustment of articles; weighs, prints, and straps boxes; nulls bills on.

Packer, club.

St. Louis Medical Depot, St. Louis, Mo.

Supervisor of 3 packers, 3 laborers in a welding; duties entail prolonged standing and walking on cement floor. Supervises work of more than 200 employees.

Packer, junior foreman.

St. Louis Medical Depot, St. Louis, Mo.

Directs work of five junior packers; in charge of five aisles; makes decisions as to appropriate number of packing various items; instructs employees as to proper method of assembling, packing, etc., and sees that rules and regulations are followed. Duties involve prolonged standing and walking on cement floor.

Packer, selector.

St. Louis Medical Depot, St. Louis, Mo.

Completes shipping documents for packed pack; selects shortages on orders; checks with shelf, brings vault and ice box items to desk; fills orders from catalogue distribution room; delivers packages to freight which are too heavy for packed pack; separates orders from trays, etc.

Packer, selected, vendor.

St. Louis Medical Depot, St. Louis, Mo.

Routes work to equitable distribution to oldest regular radio (rush) requisitioner and routes them through warehouse for immediate attention; supervises packed post office time down shortages; located upon in basement for packed shipments, etc. (Prolonged standing and walking involved.)

Packer, vendor.

St. Louis Medical Depot, St. Louis, Mo.

Supervises from two to ten packers, one to three laborers and one to six typists engaged in assembling and packing material for domestic and export shipment; inspects; determines proper consolidation of packed articles; types requisitions and packing slips; types labels, whipping tickets, etc.

Packer, vendor (also supervisor).

St. Louis Medical Depot, St. Louis, Mo.

Able supervisor; supervises two to ten packers, one to three laborers, and one typist.

Packer.

Post Office, St. Louis, Mo.

Paints, glues, pastes, etc.

Porter.

St. Louis Medical Depot, St. Louis, Mo.

Supervises shipping and packing floor; supplies tables with excelsior, corrugated paper, waterproof and wrapping paper, cork, mineral wool, nails, and clamps. Perform other work of janitorial nature. Equipment delivered in large and heavy boxes or in large rolls (wrapping paper). Work is arduous.

Powderman.

Reclamation Project, Altus, Okla.

Powderman on the reclamation project does most of the work except actual drilling of the holes. He oversees the drilling as to location and depth, oversees the placing and packing of explosives, connects the wires, and sets off the blasting.

Refrigeration mechanic, color.

United States Prison, Leavenworth, Kans.

A color-blind employee may be accepted, since the tools colors red and green can be distinguished on the page by the employee fearing their position.

Superintendent (motor vehicle service).

Post Office, Kansas City, Mo.

Post Office, Oklahoma City, Okla.

Post Office, St. Louis, Mo.

General supervisory position. A large portion of the duties consists of office work. No motor vehicle service in Oklahoma City.

Supervisor, route (motor vehicle service).

Post Office, Kansas City, Mo.

Post Office, St. Louis, Mo.

Observes operation of motor vehicle by employees; arranges schedules and routes; investigates accidents.

Watchman.

Post Office, St. Louis, Mo.

Maintain orderly patrols office; when an elevator operator is needed, sits by employee's entrance and checks them in and out; operates check stand for employee; carries firearms.

Welder.

Post Office, St. Louis, Mo.

A large portion of work consists of lifting and welding heavy cylinders for conveyances.

XVIII. UNITED STATES CIVIL SERVICE: ARMY**Assembler, cylinders.**

Red River Ordnance Depot, New Boston, Tex.

Employee disassembles cylinders under supervisor and uses Hall bent grinder; also charged with maintenance of the adjusting mechanism.

Assembler, electrical equipment.

Red River Ordnance Depot, New Boston, Tex.

Employee works in the electrical department, disassembling, repairing, and reassembling ordnance electrical equipment.

Assembler, gun mounts.

Red River Ordnance Depot, New Boston, Tex.

Employee disassembles, repairs, and reassembles gun mountings.

Assembler, large fixtures.

Red River Ordnance Depot, New Boston, Tex.

Employee works in the gun stabilizer department resulting in the disassembly, repair, and reassembly of gyro stabilizers.

Assembler, motor vehicle department.

Red River Ordnance Depot, New Boston, Tex.

Employee is responsible for assembly of ordnance: disassembly, cleaning, repair, and reassembly of carburetors and fuel pumps.

Assembler, motorized ordnance equipment.

Red River Ordnance Depot, New Boston, Tex.

Employee works in the power and train department and his duties include the disassembly, repair, and reassembly of hubbed trucks.

Assembler, small arm equipment.

Red River Ordnance Depot, New Boston, Tex.

Employee disassembles, repairs, cleans, and reassembles small arms.

Assembler, trucks.

Red River Ordnance Depot, New Boston, Tex.

Employee is responsible for the assembly of a given unit, beginning with the tires and progressing in successive steps to the assembly of axle and springs, the chassis frame, the engine, mounting the body on the chassis, the steering wheel and attachments, the battery and electric equipment, the canopy and fuel tanks, and accessories.

Batteryman, repair.

Red River Ordnance Depot, New Boston, Tex.

Employee works in the repair department where batteries are disassembled, rebuilt, repaired, and reassembled.

Blacksmith

Red River Ordnance Depot, New Boston, Tex.

Duties are those of a general blacksmith and include welding, maintenance repair of equipment, and fabrication of new parts as needed.
Carrier, city, business.

Post Office, Dallas, Tex.

Post Office, El Paso, Tex.

Delivery of business mail is very much the same as delivery to residences except that there is considerable walking up and down stairs the routes are shorter in length, and heavier mail is carried.
Carrier, city, residence.

Post Office, Dallas, Tex.

Duties involve constant walking, lifting, carrying heavy pouches (60 pounds), and walking over daily route of 15 to 20 miles. Duties are very arduous and require good physical health.
Carrier, special delivery.

Post Office, Dallas, Tex.

Duties require ability to work in all kinds of weather. This carrier job is not suitable for persons having a history of tuberculosis because of the constant exposure to the various degrees of weather both day and night.
Carrie worker.

Post Office, El Paso, Tex.

Duties are performed standing during the rush hours but at other times mail routes are used. Fully functioning primary hand and grasping power in secondary hand are required.

Clerk, box,

Post Office, New Orleans, La.

Duties are all performed standing and include sorting mail into various boxes. Employee must have good use of hand, and must be able to do considerable walking; good vision also essential.

Clerk, G. O. D. (write-up),

Post Office, El Paso, Tex.

Duties are mechanical and can be performed by handicapped persons. Primary hand must be intact with grasping power in secondary hand.
Clerk, admin department.

Post Office, Dallas, Tex.

Duties are clerical, and performed at a desk.

Clerk, parcel-post,

Post Office, El Paso, Tex.

Duties require constant handling, writing, lifting, and throwing packages.
Clerk, parcel-post, receiving and forwarding.

Post Office, New Orleans, La.

Duties are arduous and require much lifting, pulling, pushing, throwing, and handling. Sheds are received and emptied into conveyor shaft and transmitted to the dispatcher.
Clerk, registry.

Post Office, El Paso, Tex.

Duties require constant standing, good vision, and fully functioning primary hand.

Clerk, sorting,

Post Office, New Orleans, La.

During rush hours, duties are performed in standing position, but after this period employee may rest. An employee with amputated left leg is employed at present. Full function of hands and good vision are required.

Clerk, supply and storeroom,

Post Office Building, Dallas, Tex.

Duties require employee to be in good physical condition due to the lifting, pushing, pulling, stooping, bending, and reaching involved. Position suitable for persons who are hard of hearing, have missing parts of hands, or have vision in one eye only.

Custodian and assistant,

Post Office, Dallas, Tex.

Duties involve all types of maintenance repair work.

Dispatcher, Army mail,

Post Office, El Paso, Tex.

Duties are very arduous due to heavy incoming and outgoing mail.

Dispatcher, local mill.

Post Office, New Orleans, La.

Duties require constant standing, throwing, pulling, pushing, stooping, and bending.

Dispatcher, parcel-post.

Post Office, El Paso, Tex.

Post Office, New Orleans, La.

Duties require prolonged standing, throwing, pulling, lifting, and walking. Good vision is required.

Driver, fork-truck.

Red River Ordnance Depot, New Boston, Tex.

Employee operates 1, 2, or 3 ton truck lift truck, by local depot route. He is responsible for damage to truck if improperly handled, but not for the truck's maintenance. Fully functioning left hand is required to handle truck levers.

Driver, truck, heavy duty.

Red River Ordnance Depot, New Boston, Tex.

Employee drives truck carrying explosives.

Driver, wheel truck.

Red River Ordnance Depot, New Boston, Tex.

Employee uses a wheel crane to load and unload all heavy material assigned to this type of truck, i. e., truck or trailer in truck, van, and ammunition boxes, immovable by other means.

Dynamometer man.

Red River Ordnance Depot, New Boston, Tex.

Employee is responsible for testing motors (radial and inline on the dynamometer stand), making all electric connections (for testing), turning on motors of different speeds (from 750 r. p. m. to 4200 r. p. m.), recording accurate readings from gauge showing operation of tachometer, ammeter, manifold pressure, load temperature, and oil pump pressure.

Electrician, automotive.

Red River Ordnance Depot, New Boston, Tex.

Employee supervises a group of mechanics and electricians engaged in reconditioning generators, magneto, ignition batteries, and other automotive equipment.

Engineer, operating (cement).

Red River Ordnance Depot, New Boston, Tex.

Employee is responsible for reports regarding average sewage flow pumped, digested, and reperfused, the time required for each operation, and the results of effluvium and residual and pH tests.

Finisher, cement.

Red River Ordnance Depot, New Boston, Tex.

Duties involve finishing of all cement work (including horizontal and flat surfaces) as well as repairs and maintenance, but does not involve mixing cement.

Fireman, boiler.

Post Office Building, Houston, Tex.

Employee runs boiler, performs repair work and mechanical maintenance of building. Good physical condition is required.

Grinder, craneshaft.

Red River Ordnance Depot, New Boston, Tex.

Employee is responsible for setting up work in the machine and watching carefully the operation when any part of the machine may seriously affect the finished product.

Guard fireman.

Post Office Building, Houston, Tex.

Employee is primarily a guard, but must be able to assist the firemen, make building repairs, and operate the passenger elevator. As the duties involve walking, prolonged standing, and carrying firearms, full function of hands is required.

Inspector, automobile.

Red River Ordnance Depot, New Boston, Tex.

Employee is responsible for the inspection of all operating parts of the trucks (including motor, electric equipment, and brakes) and of all oiling.

Junior, unclassified.

Post Office, Ft. Worth, Tex.

Duties require person in charge to make electrical, plumbing, and minor building repairs. Employees under him are responsible for the cleaning, the furnace, the house, and general work in maintenance of the building.
Laborer, furnace.

Rail River Ordnance Depot, New Boston, Tex.

Duties include the supervision of several crews which average between 25 and 150 men each.

Laborer, furnace, assistant.

Rail River Ordnance Depot, New Boston, Tex.

Employee supervises and directs the work of three to ten crews of laborers. Considerable walking is required and he must be able to drive a car.

Laborer, junior.

Rail River Ordnance Depot, New Boston, Tex.

Junior laborers are required to perform a wide variety of simple tasks, including laying pipe lines, handling lumber, working as a truck swamper, and worn maintenance laborer.

Machinist.

Rail River Ordnance Depot, New Boston, Mass.

Employee operates any one of the following machines: Engine lathe, straight drill press, radial drill press, milling machine, universal tool-grinding machine, planer, shaper, vertical turret lathe, metal band-saw, etc. Whether or not an employee with organic heart disease or arrested tuberculosis could be considered a suitable placement depends upon the particular machine operated and the number of physically fit employees available to perform the more arduous types of work.

Mechanic, leader, automotive.

Rail River Ordnance Depot, New Boston, Tex.

Employee supervises a group of assemblers (mechanics) engaged in valve cutting, piston grinding, adjusting and bushing piston rods, main bearings, and crankshafts; all operations are in the first, second, and third assemblies.

Operator, automobile lathe/boring machine.

Post Office, Dallas, Tex.

Machine is operated for the purpose of reworking the accuracy of the key-punch operator. Duties are sedentary and involve standing and can be performed by handicapped persons such as the hard of hearing, or those lacking one eye, hands, or feet.

Operator, freight elevator.

Post Office Building, Houston, Tex.

Duties are very arduous, involve pulling and pushing in the loading and unloading of large mail trucks and lifting or pulling heavy mail sacks. Loss of parts of hands may be permitted.

Operator, key punch machine.

Post Office, Dallas, Tex.

Duties are performed sitting constantly in a given position, requiring accurate and frequent use of fingers of right hand and constant application to duty; very nerve-tiring. Rest periods are necessary during the work hours to allow employee to relax.

Operator, passenger elevator.

Post Office Building, Houston, Tex.

Duties are very light and can be performed by many types of physically handicapped. Employee sits in seat and operates lever that controls elevator.

Operator, perforating machine.

Post Office, New Orleans, La.

Duties are performed sitting or standing. Operator places cashed money orders into the machine, presses foot pedal and the machine operates automatically. Persons with one leg, parts of hands, vision in one eye, are acceptable.

Operator, pump.

Rail River Ordnance Depot, New Boston, Tex.

Employee initiates and assists the head engineer in major repairs, inspects frequently for overheating, operates pumps, reads various gages and reports to filtration plant, runs chlorine residual tests and adjusts machine for amount required, and inspects water from well to tower, 5½ miles.

Packer.

Red River Ordnance Depot, New Boston, Tex.

Employee packs repositioned equipment or stores by quantities less than standard package by standard procedure. In the tank division this includes removing all attachments and packing them in separate compartments.

Plumber.

Red River Ordnance Depot, New Boston, Tex.

Employee assembles and installs air, gas, water, and waste disposal systems for the depot.

Repairman, automotive.

Red River Ordnance Depot, New Boston, Tex.

Employee is responsible for diagnosis, repair and overhauling of all motor transportation equipment (including tanks, air compressors, and trucks).

Repairman, elevator.

Post Office Building, Houston, Tex.

Duties consist of repairing every form of breakdown which involves pulling, shoving in and out of small places, climbing, and ladder work as well as bending, stooping, and lifting.

Repairman, refrigerator.

Red River Ordnance Depot, New Boston, Tex.

Repairman is responsible for maintenance of equipment; repair coils, insulation, and all parts of the equipment connected with the depot, i. e., one 35-ton cold storage plant, 30 gallon water cooler, ten ½-ton refrigerators, and one 40-ton air conditioning unit, as well as 30 domestic refrigerators. Hazards from gas and other factors are not sufficient for rejecting a person with arrested tuberculosis.

Sheet-metal worker.

Red River Ordnance Depot, New Boston, Tex.

Duties involve fabricating and repairing all equipment including trucks, tanks, and trailers repairing sheet metal. Employee with compensated organic heart disease or arrested tuberculosis may be considered for some of the work which is sufficiently light and would not constitute a hazard.

Steam fitter.

Red River Ordnance Depot, New Boston, Tex.

Steam fitter installs, maintains, and repairs all pipe-line systems and apparatus for the distribution of steam under high pressure.

Yardmaster.

Red River Ordnance Depot, New Boston, Tex.

Employee supervises and directs several railroad crews in sorting and checking cars, loading and unloading all freight and directing their proper destination in the entire 55 miles of depot railroad system.

GEYERBURG UNITED STATES NAVY RECRUIT RECRUIT**Aircraft-instrument mechanic (all grades).****Aircraft-instrument mechanic (all grades), helper.****Aircraft-instrument mechanic (all grades), learner.**

United States Naval Air Station, Seattle, Wash.

In this position, if an audiometer line could be established, people without any hearing could be put to work because the work is all within reach and could be done in a sitting position. There is no dust or noise.

Apprentice boilermaker, first, second, third, and fourth class.

Puget Sound Navy Yard, Bremerton, Wash.

Full physical fitness essential, with rare exception; however, the present hearing requirement may be lowered. The apprentices receive the following training:

6 months with flange turner.

1 year erecting and repairing.

1 year with the lay-out man.

6 months to 1 year in the shop.

Apprentice in patternmaker shop.

Puget Sound Navy Yard, Bremerton, Wash.

Full physical fitness required, with few exceptions.

Blacksmith.

Umatilla Ordnance Depot, Hermiston, Oreg.

Blacksmith works with all ferrous and nonferrous metals in the manufacture of tools and equipment. In some cases persons totally deaf may be acceptable.

Blacksmith, heavy fires.

Puget Sound Navy Yard, Bremerton, Wash.

Position involves heavy manual labor in an environment of gas fumes in fairly high concentration. Physical requirements should be high for this position. Partial deafness in both ears or total deafness in one ear would be acceptable for this job.

Blacksmith, other fires.

Puget Sound Navy Yard, Bremerton, Wash.

Partial deafness in both ears or total deafness in one ear acceptable. Duties of this position involve heavy manual labor, in noisy surroundings, with high concentration of gas fumes at times.

Bondbuilder.

Puget Sound Navy Yard, Bremerton, Wash.

This bondbuilder handles lumber of all the types used in boat construction. He must be a judge of the quality of lumber and adept in the steaming and bending of lumber.

Boltermaker.

Puget Sound Navy Yard, Bremerton, Wash.

This position requires full physical fitness, except that partial deafness in both ears or total deafness in one ear would not interfere with proper performance of duties. These employees handle metal plates $\frac{1}{8}$ inch up to 2 inches thick, for all parts of a ship, and their duties involve shaping and forming of all hollow and baller tubes, as well as assembling bellers, smokestacks, up-takes, pressure tanks, condensers, and heavy steel plates.

Boltermaker, masthead.

Puget Sound Navy Yard, Bremerton, Wash.

Hard manual labor involved, requiring physical fitness to a high degree. Impaired hearing is acceptable.

Brikeman.

Puget Sound Navy Yard, Bremerton, Wash.

High physical standards are necessary.

Buffor and polisher.

Navy Torpedo Station, Keyport, Wash.

Duties involve wetting up wheel with different grades of grit for grinding down metal parts, followed by buffing and plating. Duties are quite arduous and generally performed standing. Persons having vision in one eye or being totally deaf are acceptable.

Buller and polisher.

Puget Sound Navy Yard, Bremerton, Wash.

The duties involve machine operation requiring a great deal of standing.

Cutter and clipper.

Puget Sound Navy Yard, Bremerton, Wash.

Employee uses hand or machine-operated tools. A noisy job, where partial or almost complete deafness would be an asset.

Canvas maker.

Puget Sound Navy Yard, Bremerton, Wash.

This employee operates machines, but the bulk of the work is done by hand. Primary hand necessarily must have good function, but secondary hand may have impaired function.

Concrete shifter.

Puget Sound Navy Yard, Bremerton, Wash.

Full physical fitness required.

Cooker.

Marshall Ordnance Depot, Hermiston, Oreg.

Semiarduous duties involve the handling of heavy boxes which require that a person be in good physical condition. Totally deaf persons may be occasionally employed.

Coat finisher, hand froner.

Puget Sound Navy Yard, Bremerton, Wash.

Considerable standing is involved in performing the duties of this job.

Cooper.

Puget Sound Navy Yard, Bremerton, Wash.

Arduous-duty position. This employee repairs carboys and wood barrels.

Coppersmith.

Puget Sound Navy Yard, Bremerton, Wash.

Duties involve fabricating and shaping, by forging of pipes, fittings, and other materials made from copper.

Cupola tender.

Puget Sound Navy Yard, Bremerton, Wash.

The duties involve charging the cupola and seeing that iron is melted properly.

Diamondker.

Puget Sound Navy Yard, Bremerton, Wash.

The duties involve precision work and machine operation.

Dyer.

Puget Sound Navy Yard, Bremerton, Wash.

Duties involve under water welding and cutting down to 60-foot depths as well as inspecting plates and cleaning dry dock casements.

Dumb-bell operator.

Puget Sound Navy Yard, Bremerton, Wash.

Duties involve mostly machine work with heavy machinery.

Drill room, pneumatic.

Puget Sound Navy Yard, Bremerton, Wash.

Defenses would not interfere with proper performance of duties.

Driller.

Puget Sound Navy Yard, Bremerton, Wash.

Duties involved in the position of "driller" are - Drilling, counterboring, counterboiling, back facing, and tapping.

Electrician.

Puget Sound Navy Yard, Bremerton, Wash.

This employee does the wiring of the instruments, an inside job. His position may often be called an art.

Electrician.

Puget Sound Navy Yard, Bremerton, Wash.

In addition whaling, which is part of the duties of this position, the employee may have to work at high elevation and occasionally in dusty environment.

Engineer, architectural.

United States Naval Air Station, Seattle, Wash.

Employee prepares plans and specifications for the building of electrical power, water and steam, and inspection of construction and remodeling of buildings and vessels.

Engineer, architectural, associate.

United States Naval Air Station, Seattle, Wash.

Employee checks architect's drawings, makes preliminary sketches, designs and estimates no to costs.

Engineer, electrical.

United States Naval Air Station, Seattle, Wash.

Women could not qualify for the power and industrial work, but women could qualify for the communications or field work (radio and telephone).

Engineer, electrical, associate.

United States Naval Air Station, Seattle, Wash.

Employee designs electrical installations and maintenance of same, prepares complete drawings of specifications and equipment and operating instructions.

Engineer, mechanical.

United States Naval Air Station, Seattle, Wash.

Physical fitness standards depend on the phase of the work. Heating and ventilation engineer requirements are higher than the requirements for inspection work.

Engineer, mechanical, associate.

United States Naval Air Station, Seattle, Wash.

Employee designs heating, ventilating and plating systems for buildings. Some outside work is involved necessitating higher physical standards than ordinarily required for strictly desk positions.

Engineer, structural.

United States Naval Air Station, Seattle, Wash.

Inspection work in this position requires full physical fitness.

Engineman.

Puget Sound Navy Yard, Bremerton, Wash.

In general, the physical requirements must be high for this position.

Engineman, steam.

Puget Sound Navy Yard, Bremerton, Wash.

High physical standards necessary.

Fireman, stationary, high pressure.

Puget Sound Navy Yard, Bremerton, Wash.

Duties and responsibilities are comparable to those of an engineer.

Hanger-lifter.

Puget Sound Navy Yard, Bremerton, Wash.

Employee performs arduous duty. Hearing requirements could be liberalized.

Hanger-turner helper.

Puget Sound Navy Yard, Bremerton, Wash.

An arduous duty position requiring agility and dexterity.

Foreman, general rigger.

Puget Sound Navy Yard, Bremerton, Wash.

Physical requirements must be high.

Foreman, pipe fitter.

Puget Sound Navy Yard, Bremerton, Wash.

About 75 percent supervisory and 25 percent inspection work. Physical qualifications are necessarily high.

Foreman, rigger.

Puget Sound Navy Yard, Bremerton, Wash.

Full physical fitness essential. Position entails shop work as well as installation work on board ship. Total deafness not desirable, but employee may be hard of hearing.

Forger, drop.

Puget Sound Navy Yard, Bremerton, Wash.

Partial deafness in both ears or total deafness in one ear acceptable. Work involves heavy manual labor.

Forger, heavy.

Puget Sound Navy Yard, Bremerton, Wash.

Partial deafness in both ears or total deafness in one ear acceptable. Working environment contains gas and fumes.

Forger, light.

Puget Sound Navy Yard, Bremerton, Wash.

Partial deafness in both ears or total deafness in one ear is acceptable. Work involves exposure to excessive light, heat, gas, and noise.

Foundry chiper.

Puget Sound Navy Yard, Bremerton, Wash.

Deafness would be accepted in this position. Air guns (air-power-chisels) and grinders are used to straighten and smooth castings. The environment is noisy and dusty.

Furnace bender.

Puget Sound Navy Yard, Bremerton, Wash.

Position involves arduous duty performed in a noisy shop. The duties involve bending of heavy material on the "slab," after it has been heated in the furnace.

Furnacecut, bender.

Puget Sound Navy Yard, Bremerton, Wash.

This is an arduous-duty job, requiring high physical qualifications. Hearing requirements may be lowered and some minor deformities such as the loss of a finger or two on one or both hands may be permitted.

Galvanizer.

Puget Sound Navy Yard, Bremerton, Wash.

Sulfuric and muriatic acids are used, as well as sal-ammoniac, and the fumes of these acids represent one of the hazards of this position. The galvanizers work in "steame." Hearing in one ear or partial deafness in both ears acceptable.

Gas cutter and burner.

Puget Sound Navy Yard, Bremerton, Wash.

Present physical requirements can be lowered for this position. Duties involve operation of equipment such as radiographs and omnigraphs in connection with the cutting of structural plates and shapes.

Grinder.

Puget Sound Navy Yard, Bremerton, Wash.

(See addendum sentence for Letteror.)

Grinder.

Naval Torpedo Station, Keyport, Wash.

Duties involve grinding rough castings on grinders and "burring". Good physical fitness is required; total deafness is acceptable.

Heat treater.

Puget Sound Navy Yard, Bremerton, Wash.

Both arms and hands must be functionally good and intact.

Helper, electrician.

Puget Sound Navy Yard, Bremerton, Wash.

No defects of eyes, arms, or legs are acceptable in this position.

Helper, general (gutter).

Navy Torpedo Station, Keyport, Wash.

Duties consist of reloading and cleaning igniters, operating machines to clean igniter parts, and cleaning by hand small drill holes gunned up with powder.

Helper, rigger.

Puget Sound Navy Yard, Bremerton, Wash.

Physical requirements must be high.

Helper, woodworker.

Puget Sound Navy Yard, Bremerton, Wash.

Duties consist of piling up lumber, unloading cars, and other manual labor.

Hod carrier.

Puget Sound Navy Yard, Bremerton, Wash.

Duties involve heavy manual labor. Duties include applying plasterers and cement workers, as well as brick masons, with necessary material.

Holder-on.

Puget Sound Navy Yard, Bremerton, Wash.

The job consists mainly of buckling up rivets while they are being hammered by the riveter, but holder-on must also use a pneumatic rivet hammer in "double ganging" riveting.

Inspector, torpedo parts.

Navy Torpedo Station, Keyport, Wash.

Duties involve the inspection of torpedo parts manufactured at the station and by outside contractors, and the inspection of machinery and material used in the handling and completing of these parts.

Instrument maker.

Puget Sound Navy Yard, Bremerton, Wash.

Some lowering in physical requirements is permissible. Defective hearing, disability of shoulder and hip joints, and loss of one leg are acceptable.

Job printer.

Puget Sound Navy Yard, Bremerton, Wash.

Duties involve heavy lifting and prolonged standing on cement floors.

Joiner.

United States Naval Air Station, Seattle, Wash.

Bench and machine work require the employee to be dexterous at reading blueprints and possess a familiarity of types of work. Employment is noisy and dusty.

Joiner.

Puget Sound Navy Yard, Bremerton, Wash.

Duties involve cabinet work and include fitting together and assembling machine-made material.

Joiner and joiner helper.

United States Naval Air Station, Seattle, Wash.

Physical requirements necessarily high for this position.

Joiner, foundry.

Puget Sound Navy Yard, Bremerton, Wash.

Joiner does carpenter work with heavy lumber. Joiner makes wood tasks for molding and repairing them broken after each use.

Laborer, classified.

Puget Sound Navy Yard, Bremerton, Wash.

This laborer is a cleanup man who salvages material thrown away as waste.

Laborer, classified.

Puget Sound Navy Yard, Bremerton, Wash.

These employees are used as helpers when necessary. Advancement is possible to higher grades. Considerable dust and smoke is present in working environment.

Laborer, classified (patternmaker shop).

Puget Sound Navy Yard, Bremerton, Wash.

Physical requirements may be more liberal than for other classified labor positions in this navy yard.

Laborer, classified, sheet-metal shop.

United States Naval Air Station, Seattle, Wash.

The classified laborer in this shop is a "clean-up" man, who salvages material that otherwise would be wasted.
Laborer, classified, unskilled.

Unimilia Ordnance Depot, Hermiston, Oreg.

Arduous duties involving heavy manual labor and heavy lifting require employee to be in excellent physical condition.
Ladleman, foundry.

Puget Sound Navy Yard, Bremerton, Wash.

The ladleman in this foundry prepares ladles for pouring, by lining them and repairing any damaged parts.

Leather worker, upholsterer.

Puget Sound Navy Yard, Bremerton, Wash.

Duties consist of hand and machine work.
Letterer.

Puget Sound Navy Yard, Bremerton, Wash.

Duties consist mainly of lettering and sign painting.
Machinist operator,

Puget Sound Navy Yard, Bremerton, Wash.

Many of the machines can be successfully operated by persons having only one arm and one hand. In addition, they may even have one leg missing.

The requirements for shearers and planers are higher.

Machinist operator, speechless.

Puget Sound Navy Yard, Bremerton, Wash.

Total deafness acceptable in this position. There are two or three operations performed which are repeated continually.

Machinist,

Naval Torpedo Station, Keyport, Wash.

Duties involve drilling, boring, reaming, and turning according to specifications, as well as fitting and soldering keys into place, fitting and soldering noves in pistons, turning water wheels; operating an engine lathe "turning down" bushings for steering engines (of a torpedo); finishing facing side bearing bushing, turning gyro wheels, grinding cylinder bore of steering engine cylinder, drilling, reaming, facing, and threading control valve bodies; boring, turning and threading depth engine cylinders.

Machinist,

Unimilia Ordnance Depot, Hermiston, Oreg.

Duties (heavy) involve lay-out work and repairing, and the making of gear shafts and replacements of all descriptions.

Machinist, drill-press, apprentice.

Naval Torpedo Station, Keyport, Wash.

Duties involve supervised drilling, using a simple spindle drill-press.

Machinist, general.

United States Naval Air Station, Seattle, Wash.

Loss of one leg acceptable for shop work.

Machinist, helper.

Naval Torpedo Station, Keyport, Wash.

Duties involve tapping of small holes in torpedo parts and operating universal radio drill. All grades of metals are used. Machine work is supervised.

Machinist, helper.

Puget Sound Navy Yard, Bremerton, Wash.

This employee assembles tools and equips tool boxes for both inside and outside machinists. Partial deafness is acceptable.

Machinist, inside.

Puget Sound Navy Yard, Bremerton, Wash.

This is the finer, more accurate type of work that the machinist performs. The lathes and equipment are smaller, and the work to be done is of a finer type.

Machinist learner, scanning and bottom drilling.

Naval Torpedo Station, Keyport, Wash.

Duties involve operating machine drills for scanning and bottom drilling. The machines, almost "fool-proof" are checked and repaired by supervisors in emergencies.

Mason, brick.

Mason, alone.

Puget Sound Navy Yard, Bremerton, Wash.

This man in the foundry works with brick or stone, as the specific job at hand requires. Most of his work is done with firebrick and fireclay.

Mechanic, general.

United States Naval Air Station, Seattle, Wash.

Physical requirements are more liberal than those of a general mechanic, since the automotive mechanic works on machinery not in motion while the general mechanic works on machinery that is in motion. Some limitation of motion in the knee or elbow joints unacceptable.

Mechanic, maintenance.

Umatilla Ordnance Depot, Hermiston, Oreg.

Employee, a general repairman, makes replacement parts and repairs worn-out and used parts. A machinist, however, makes the new parts.

Mechanic, rated chief in charge of shop.

Puget Sound Navy Yard, Bremerton, Wash.

This "shopkeeper" receives and stores all the manufactured and special material items for specific jobs in the pipe and copper shops.

Melter, brass, nonferrous mixtures.

Melter, electric, steel-furnace operator.

Puget Sound Navy Yard, Bremerton, Wash.

Partial deafness in both ears or total deafness in one ear acceptable.

Melter, open hearth.

Puget Sound Navy Yard, Bremerton, Wash.

Physical requirements necessarily high, in view of arduous type of duty.

Millman.

Puget Sound Navy Yard, Bremerton, Wash.

Millman operates all the woodworking equipment in the mill.

Molder, helper.

Puget Sound Navy Yard, Bremerton, Wash.

The helper must sand, get material ready for molder, and help in pouring the metal. Rayonproofing, boilhardy, and previous experience present.

Naval Inspector, brass castings, Alco Valve Co.

Office of Inspector of Naval Material, Seattle, Wash.

Employee inspects and checks according to specifications, the brass castings for fastening in ships at shipyards, and stamps final approval using machine stamp.

Naval Inspector, copper connections, Alaska Copper Co.

Office of Inspector of Naval Material, Seattle, Wash.

Employee inspects cast and rolled copper of all descriptions (tubing, valves, cast connections), and tests these connections under excessive water pressure (up to 200 pounds) for leakage due to imperfect material or workmanship.

Naval Inspector, furnaces, Heatex Engineers, Inc.

Office of Inspector of Naval Material, Seattle, Wash.

Employee inspects furnaces and all kinds of steel fabrication, v.g., electrical boxes for the Navy, exhausts, and splitting stoves that come to faster heating on the hull of a ship. Inspector must detect any imperfection or deviation from specifications.

Naval Inspector, galvanizing, Johnson Iron Works.

Office of Inspector of Naval Material, Seattle, Wash.

Employee examines freshly galvanized iron to see that metal is completely coated, that the pickling (roughing it off) is perfect, that all dirt has been removed, and that no "spots" will have the "galvanized" just coating these parts, without being a part of the metal. If a person having only one leg is active and agile, he may be accepted.

Naval Inspector, heavy castings, Phillips Iron and Steel Co.

Office of Inspector of Naval Material, Seattle, Wash.

Employee inspects heavy castings and stamps them when finally approved using the USN stamp. Castings are used in the heavy machinery which also is inspected after assembling (anchor stamp).

Naval Inspector, hoisting apparatus, Murley and Co.

Office of Inspector of Naval Material, Seattle, Wash.

Employee observes the assembling of all hoisting apparatus and witness in the building process. When final test has been run, the anchor stamp will authorize the installation on the ship. Employee must possess first-class knowledge of machinery, and be active and agile.

Naval Inspector, machinery, Star Machinery Co.

Office of Inspector of Naval Material, Seattle, Wash.

Employee, in order to inspect lathes and allied machinery products, visits the plant in the various stages of machine construction and assembly to see that all parts going into the machine are satisfactory. After the machine is run and tested for accuracy and smooth running, employee places the anchor (steel) stamp on the name plate, which marks it finally approved for shipment to the plant where the machine will be installed.

Naval inspector, oil, Standard Oil Loading Plant, Richmond, Wash.

Office of Inspector of Naval Material, Seattle, Wash.

Employee takes samples of oil for laboratory test, watches the filling of boats with oil, and secures a general survey of "what's going on," by periodic visits to the various oil depots (chiefly large plants filling Navy orders). A good personality is essential. Minor physical defects acceptable.

Naval inspector, plywood, Buffonton Lumber and Manufacturing Co., Tacoma, Wash.

Office of Inspector of Naval Material, Seattle, Wash.

Employee observes the manufacturing of plywood, its packaging and loading, and advises on same. He should be familiar with all phases of plywood manufacturing and see that quality is maintained.

Naval inspector, propellers, Doran and Company.

Office of Inspector of Naval Material, Seattle, Wash.

Employee checks the propellers as to balance and required specifications and checks the crating of the propeller preparatory to shipment.

Naval inspector, pulleys, Young Iron Works.

Office of Inspector of Naval Material, Seattle, Wash.

Employee inspects for defects and imperfections all types of pulleys that are here cast, finished, and assembled before approving them.

Naval inspector, rough castings, Western Steel Castings Co.

Office of Inspector of Naval Material, Seattle, Wash.

Employee applies USN stamp on castings "in progress," applies the anchor stamp, when the rough castings are finished. He must be agile, and must be thoroughly familiar with the metals and the firms with which he deals.

Naval inspector, shafts, H & J Machine Works.

Office of Inspector of Naval Material, Seattle, Wash.

Employee gauges and inspects heavy steel shafts before the laboratory test is made and approves. A good knowledge of metals is required. Physical standards are rather high; employee must be agile.

Naval inspector, steel castings, Isaacson Iron Works.

Office of Inspector of Naval Material, Seattle, Wash.

When steel is cast, it comes out in "bars" 12" x 12" x 10', and a piece is retained for the laboratory test where it is tested for tensile strength and other required specifications. Approved "bars" are then ready to be forged into shafts, wrenches, etc.

Naval inspector, steering gears, Webster-Brinkley Co.

Office of Inspector of Naval Material, Seattle, Wash.

Inspector watches all phases of manufacturing and assembling work on these large important machines. After their final (actual operation) test employee applies the anchor stamp which releases a machine for ship installation. Agility and skill are essential for this position, as well as a thorough knowledge of machinery.

Naval inspector, stoves, F. S. Lang Stoves.

Office of Inspector of Naval Material, Seattle, Wash.

Duties involve the inspection of stoves and stove parts before crating for shipment. If additional work is required and the item is "In progress," Inspector places USN stamp on name plate; if inspection is final and approved, he places the anchor stamp on the name plate.

Naval inspector, switchboards, Trumbull Electric Shop.

Office of Inspector of Naval Material, Seattle, Wash.

Panel boards, switchboards, and all electrical equipment are rubber-stamped to prevent defacing and to indicate specifications have been met. Inspector must be familiar with all phases of the work and must be able to read the blue prints. He should be agile and able to drive to and from work,

Naval inspector, valves, Belshaw Bros.

Office of Inspector of Naval Material, Seattle, Wash.

Duties involve valve inspection. Valve ends are received here, machined, then assembled and tested at 100 pounds water pressure to show up "cold spots" (holes caused by dirt or foreign substance); nuclear stamp is affixed if valve is approved.

Naval inspector, valves, Chittenden Machine Works.

Office of Inspector of Naval Material, Seattle, Wash.

Valves cast, ground, and threaded before being tested by the inspector.

Naval inspector, water and fuel tanks, Puget Sound Sheet Metal Co.

Office of Inspector of Naval Material, Seattle, Wash.

Duties involve the inspection of tank (sheet metal) which fit into the various irregular angles of the ship; the testing of these tanks by an excessive water pressure to insure no leakage; the inspection of weldings and metal. Agility is important as the inspector must be able to get around from work and to proceed safely through plants and storage places.

Operator, automatic machine.

Naval Torpedo Station, Keyport, Wash.

Duties involve operating the automatic machine, fabricating various parts for the torpedo screws and bushings, valves, sleeves, nuts, and grommings), assembling and disassembling, as well as repairing and testing of torpedo parts. Work is light, but patience is required. Good vision and manual dexterity are essential. Defective hearing, loss of both legs, some deformity of the spine will not disqualify employee. Non-smokers are chosen.

Operator, mill.

Naval Torpedo Station, Keyport, Wash.

Employee cuts contour of any irregularly shaped metal device according to specifications. A variety of delicate work is done by these "millmen" involving which are manipulated with a minimum of effort.

Operator, powerhouse.

Puget Sound Navy Yard, Bremerton, Wash.

Employee must be an alert student due to the responsibility involved in the rotating service in the yard and industrial departments. Amputation of one lower extremity below the knee would not be disqualifying if a well-functioning prosthesis is used.

Operator, press.

Puget Sound Navy Yard, Bremerton, Wash.

Total deafness not desirable, but partial deafness acceptable. Employee must be agile.

Operator, sawing, welding.

Puget Sound Navy Yard, Bremerton, Wash.

Physical qualifications need not be so high.

Optical-instrument assembler.

Puget Sound Navy Yard, Bremerton, Wash.

Physical requirements are higher than for the instrument maker, because of the places where installation and assembling are done.

Optical-instrument maker.

Puget Sound Navy Yard, Bremerton, Wash.

Persons who are partially or totally deaf may be considered for this position.

Ordnanceman.

Naval Torpedo Station, Keyport, Wash.

Employee inspects torpedo parts and machinery.

Ordnanceman.

Puget Sound Navy Yard, Bremerton, Wash.

Washing and care of equipment are part of the duties; the repair of equipment is done by the machinist.

Ordnanceman, cleaning plant.

Naval Ammunition Depot, Bremerton, Wash.

Duties involve cleaning and washing projectiles (5 inch BB projectiles) which come from the factory and then sending them to the "D" loading plant to be charged ("D" explosives or nonexplosive projectile). Work is light; no lifting is required.

Ordnanceman, nonexplosive.

Ordnanceman, coppersmith, helper.

Naval Ammunition Depot, Bremerton, Wash.

Employee overhauls powder tanks and shell cases (chiefly nonferrous metals), in reconditioning process preparing them for reuse. New cases and tanks are washed and checked before they are used again.

Ordnanceman, joiner, ship carpenter.

Naval Ammunition Depot, Bremerton, Wash.

Employee does general maintenance woodwork such as repairing and fixing equipment; operates power machine; does odd jobs.

Ordnanceman, loading plant.

Naval Ammunition Depot, Bremerton, Wash.

Duties involve heavy lifting of boxes (with loaded cases) and of heavy individual projectiles. Physical standards must be high.

Ordnanceman, powder charger.

Naval Ammunition Depot, Bremerton, Wash.

Duties involve stacking powder on the machine, lacing it in tops, side-lacing, gagging, and tanking of powder charges. Heavy duty work.

Ordnanceman, sawing room.

Naval Ammunition Depot, Bremerton, Wash.

Employee uses heavy silk material, using power machines. Neuro stability is essential; a rest period is provided in the forenoon as well as in the afternoon. Considerable vibration is involved.

Packer.

Puget Sound Navy Yard, Bremerton, Wash.

Position involves heavy manual labor, in addition to crating, packing, and nailing up boxes. These employees lift heavy boxes and barrels.

Painter, sprayman.

Puget Sound Navy Yard, Bremerton, Wash.

Hard-of-hearing employees are acceptable.

Painter.

United States Naval Air Station, Seattle, Wash.

Brush and spray painting as well as lettering is included in this job. Position requires two good eyes for close work. Color vision essential.

Painter, general.

United States Naval Air Station, Seattle, Wash.

Employee does brush and spray painting in moderately clean and quiet surroundings.

Painter, quartermaster.

United States Naval Air Station, Seattle, Wash.

Employee must be adept in the painting of signs and in spray painting. Clean and quiet surroundings.

Painter, sign.

United States Naval Air Station, Seattle, Wash.

Employee is the letterer and grainer. A physically handicapped person would be acceptable as the work is chiefly desk duty.

Painter, snapper.

United States Naval Air Station, Seattle, Wash.

Employee acts as an understudy for the quartermaster or painter foreman.

Patterunner.

Puget Sound Navy Yard, Bremerton, Wash.

"Patterunner" is also included under the title of "patternmaker."

Pipe caicer and insulator.

Puget Sound Navy Yard, Bremerton, Wash.

The hazard of pneumoconiosis is present.

Pipe fitter.

Puget Sound Navy Yard, Bremerton, Wash.

This pipe fitter installs, repairs, alters, and maintains all piping systems on board naval vessels.

Plasterer.

Puget Sound Navy Yard, Bremerton, Wash.

Position involves arduous physical exertion, necessitating high physical requirements.

Plater.

Naval Torpedo Station, Keyport, Wash.

Employee plates parts in different solutions, in a damp environment. Work is performed standing.

Plumber.**Plumber's helper.**

United States Naval Air Station, Seattle, Wash.

An arduous-duty position, which includes, besides regular plumbing work, all piping, drainage, ventilation, and similar duties. Physical requirements must be high.

Painter, ship.

Puget Sound Navy Yard, Bremerton, Wash.

Prolonged climbing is required in the performance of the duties of this position.

Rigger, antenna.

Puget Sound Navy Yard, Bremerton, Wash.

Physical requirements must be high.

Rigger, ship.

Puget Sound Navy Yard, Bremerton, Wash.

Physical requirements must be high. Duties involve cubic splining at high elevations and in dangerous places.

Rivet healer.

Puget Sound Navy Yard, Bremerton, Wash.

A one-eyed person with one leg missing or with flexibility of one arm could perform the duties of this position. Loss of hearing in one ear or partial deafness in both ears acceptable.

Sandblaster.

Puget Sound Navy Yard, Bremerton, Wash.

Total deafness in one or partial deafness in both ears unacceptable. A person who is single but with one leg missing would be acceptable.

Sandblaster.

Naval Torpedo Station, Keyport, Wash.

All heavy work. Duties involve "spraying" (under pressure), "shot" against rough castings to smooth them. Work is chiefly performed standing. Environment is dusty and noisy.

Sandblaster, shotblaster (ground).

Puget Sound Navy Yard, Bremerton, Wash.

The "sandblaster" must stand close to chemicals and sand from castings that come out of the molds. A deaf person would be unacceptable for this job.

Search brusher.

Naval Torpedo Station, Keyport, Wash.

Employee cleaned threads preparatory to plating. Work is chiefly voluntary. A person totally deaf is unacceptable.

Set-up man.

Naval Torpedo Station, Keyport, Wash.

Duties involve operating machine with a view to keeping the wheels turning and detecting trouble before any damage is incurred. The Navy rates the employee as tool-tinker (there being no rating for set-up man).

Sewer.

Puget Sound Navy Yard, Bremerton, Wash.

Heavy sewing is done by men and the lighter sewing by women.

Sewer, parachute, intercom line.**Sewer, parachute, maximum.****Sewer, parachute, minimum.**

United States Naval Air Station, Seattle, Wash.

Employee operates a power sewing machine and sews and repairs silk parachutes. Acute eyesight is essential; both hands are necessary for handling the silk.

Sheet-metal worker.

Unatilla Ordnance Depot, Hermiston, Ore.

Employee constructs, does layout work, and installs what he makes.

Sheet-metal worker.

United States Naval Air Station, Seattle, Wash.

This worker handles weights of plates up to 18 gauge. Position requires agility. Partial deafness unacceptable for this position.

Shipfitter.

Puget Sound Navy Yard, Bremerton, Wash.

Position requires a high degree of physical fitness. The work is arduous. Duties involve work on new ship construction, as well as alteration and repair of vessels.

Shipwright.

Puget Sound Navy Yard, Bremerton, Wash.

Duties of shipwright involve laying down wooden decks as well as all other wood foundations. This is an arduous duty position.
Stockman, storekeeper.

Puget Sound Navy Yard, Bremerton, Wash.

Some nominal labor involved in this position. Hearing required, since stockman must be able to hear the telephone ring.
Storekeeper, ordnance equipment.

United States Naval Air Station, Seattle, Wash.

Position entails 10 percent arduous and 90 percent light duty. Physical requirements need not be high.
Storekeeper, supply.

United States Naval Air Station, Seattle, Wash.

An arduous duty position, but one leg and one arm would be acceptable.
Storekeeper, supply salvage department.

United States Naval Air Station, Seattle, Wash.

Position entails 60 percent arduous duty. This employee receives, handles, and exchanges damaged materials.
Storekeeper, technical aviation.

United States Naval Air Station, Seattle, Wash.

Adaptability to this work, rather than high physical requirements, is essential. Standing and accuracy are required in place of high physical standards.

Surveyor, instrument man.

United States Naval Air Station, Seattle, Wash.

This employee operates and maintains surveying equipment and makes calculations.
Tire and plate acter.

Puget Sound Navy Yard, Bremerton, Wash.

Employees lay deck coverings of linoleum on metal decks and also rubber satire on weather decks.
Upholsterer.

Puget Sound Navy Yard, Bremerton, Wash.

Partial deafness in both ears or total deafness in one ear is acceptable.
Watch and chronometer repairer.

Puget Sound Navy Yard, Bremerton, Wash.

Employee could be totally deaf and perform duties satisfactorily. Organic heart disease fully compensated acceptable for this position.
Welder.

Umatilla Ordnance Depot, Hermiston, Oreg.

Employee constructs, designs, and fabricates all metals in the repair and construction fields.
Welder, electric.

Puget Sound Navy Yard, Bremerton, Wash.

The fumes in the working environment are a hazard in this position.
Welder, gas.

United States Naval Air Station, Seattle, Wash.

At this station gas welders also do gas cutting as well as arc welding.
Partial deafness acceptable for this position.

Wood carver.

Puget Sound Navy Yard, Bremerton, Wash.

An arduous duty position. Agility is required. Impaired hearing would be an asset.

Woodworker helper.

United States Naval Air Station, Seattle, Wash.

Employee works with the joiner. In his subordinate capacity, he should understand all phases of the work.

TWELFTH UNITED STATES CIVIL SERVICE REGION**Aircraft mechanic, general.**

Alameda Naval Air Base, Alameda, Calif.

This work can and is being done satisfactorily by women. While there is a certain amount of climbing about on planes, there is enough other work in this position so that a person with a usable artificial leg could be employed satisfactorily.

Aircraft mechanic, motor.

Alameda Naval Air Base, Alameda, Calif.

Much of this work is done at the bench. Lifting of any heavy object is, or can be done by Indians or male workers.

Aircraft-armament mechanic.

Sacramento Air Depot, Sacramento, Calif.

Although installation of guns in the plane requires a high degree of physical fitness, there are many bench jobs in this department that could be filled satisfactorily by persons having various handicaps, such as one leg off or other crippling conditions.

Aircraft-fabric worker.

Alameda Naval Air Base, Alameda, Calif.

These employees work very close together, often directly opposite each other, and any questionable case of tuberculosis would be a definite hazard.

Aircraft-fabric worker.

Moffett Field, Calif.

This employee repairs and fabricates new cloth coverings on dirigibles. The cloth or skin of these ships is lighter than that used on the wings of planes. The cloth used in the gas bags is much heavier, consisting of two or three layers cemented together with a rubberlike compound. Considerable stretching may be necessary to effect repairs on the various surfaces of a dirigible. The worker is apt to suffer fumation, on the floor, when working on the balloon bag and must roll old compound off the surface before stretching them together. There may be some hazard from fumes of the solvent in the cement used to hold tape onto the seams. Pulling sections of the gas bag into the sewing machine is strenuous, as the fabric is stiff and heavy and there is a great deal of it to handle.

Armature-end taper.

Marin Island Navy Yard Electrical Shop, Marin Island, Calif.

This employee must place the finished coil lead into the motor and connect the lead wire. No two jobs are alike; the coils vary in size, shape, and type of insulation.

The shop where this work is done presents a hazard for the blind because of machinery and particularly the partial obstruction of the aisle by equipment, and the parts scattered around in the process of repair.

Airframe-fabric worker and rib stitcher.

Palo Alto School, Alameda Naval Air Station, Alameda, Calif.

Fabric worker cuts, and sews fabric onto the wing framework of aeroplanes wings and other flat surfaces. Rib stitcher sews fabric to the framework ribs of wings, etc. This work is done by hand, using needles of various lengths. Accuracy in the spacing of stitches while rib stitching is obtained by the use of wooden blocks that vary in length according to the type of stitch being taken.

Blacksmith.

Post Office Garage, San Francisco, Calif.

Employee requires, welds, and strengthens heavy parts of the automotive equipment used in handling the mail, and may (but not frequently) be exposed to severe heat. Tools used: Hammer, forge, oxyacetylene torch. Due to exposure to dust, heat, and the arduous nature of the duties, persons receiving pneumothorax treatment or having a history of tuberculosis are not acceptable.

Brakeman.

Marin Island Navy Yard, Marin Island, Calif.

A strong, healthy woman could fill this job very well.

Buffet and producer.

Alameda Naval Air Base, Alameda, Calif.

On some machines the employee could sit and do most of the work satisfactorily. On larger pieces of work it is necessary to stand.

Cabinetmaker.

United States Post Office, Bluebon Annex, San Francisco, Calif.

Employee manufactures, repairs, and maintains the cases, desks, sorting tables, etc., used in the post office for handling of mail and transmitting routine business. Practically all of the work is done in the shop by use of hand tools or power machinery. There is no exposure to fumes, excessive changes in temperature or industrial hazards other than operation of power tools. The operation of power tools requires depth perception to lessen the hazard of injury, unless the employee has acquired by having one eye only can demonstrate by a work record that he has successfully operated this equipment for many years without injury.

Cable splicer, rigging loft.

Port Mason, San Francisco, Calif.

Free movement of the shoulders is essential in this work. As long as a person can get around on his legs and use them in pressing against his workbench, he can do this work.

Blood pressure is not a factor in these positions. The work is done at a bench, and there is no stress or strain on the men while working. It is all hand work, and the tools used are a wrench, marlinspike, and a bench vise. A small block and tackle is used to put a light strain on the cables.

Calker and chipper, iron.

Moro Island Navy Yard, Moro Island, Calif.

This work is too strenuous for the average woman. An extremely rugged, husky female might be able to perform the duties.

Can tester.

Moro Island Navy Yard, Moro Island, Calif.

The operator stands before a machine, places a can on the stand, causes an airtight top to come down on top of can, and subjects it to internal air pressure of 15 pounds per square inch. The can is inspected for leaks by listening for escape of air and rubbing a solution of soapy liquid along the welded seams. This work is not suitable for arrested cases of tuberculosis because of the likelihood of the employee developing frequent upper respiratory tract infections.

Carpenter, ship joiner.

Port Mason, San Francisco, Calif.

In regard to height and weight, this employee at times has to get in and out of small spaces on board ships; however, in the average shop the proportion of obese men to those of average size would be such that there would always be enough slender workers to perform the required tasks.

Carpenter and trimmer.

Post Office Garage, San Francisco, Calif.

Employee repairs and replaces wooden bodies of trucks and repairs and replaces canvas curtains and the canvas from the roof of those trucks and cars. Uses power tools, such as circular saw, band saw, routers, etc. Depth perception necessary, unless applicant having monocular vision has shown by previous work history that he can use power tools safely. Loss of one leg, with satisfactory prosthesis is acceptable.

Carrier, rural.

Post Office, Phoenix, Ariz.

Carrier routes are mostly on level ground, roads have fairly good pavement, and driving conditions are good. Route has a heavy load, between 800 and 850 boxes. Maximum weight handled would be 75 pounds; route is covered in approximately 8 hours. Due to the excessive heat in summer (at times 117 degrees in the shade) it is felt that a person having heart disease of any type would not be acceptable for this position, as the intense heat makes the work considerably more arduous. A totally deaf person using a satisfactory hearing aid may be accepted.

Carrier, rural.

Post Office, Redwood City, Calif.

Route is about 33 miles long, and it has nearly 600 boxes. Maximum weight permitted in one package is 70 pounds. Maximum weight of any sack of mail employee would be required to handle would not exceed 75 pounds. Routes are all paved, but hilly, and in many instances winding and tortuous. Climatic conditions are good. All homes and establishments at which carrier stops are within 100 yards of the road. Total time required to carry letters to the office, makes rounds, and finish afternoon office work is between 8 and 9 hours.

Courier, village.

Post Office, San Dimas, Calif.

Employee carries a sack weighing from 25 to 30 pounds, and in the course of the day's deliveries walks from 10 to 12 miles. Most of the territory is level, although there are some moderate hillsides. In placing the mail at the various homes, he has to climb up the 15 steps maximum. Climatic conditions are good, although in summer a temperature between 90 degrees and 100 degrees is often experienced. Total time required to carry mail delivery and return to office, approximates 8 to 9 hours a day. Varicose veins would be aggravated and cause disability in proper performance of duties.

Charwoman.

Post Office Building, Oakland, Calif., and Main Post Office, San Francisco, Calif.

Duties of this position involve cleaning, sweeping, dry mopping, and dusting. Invariably are not required to reach higher than their own heads to cleaning, are not required to climb any stairs or ladders, and do not have to do any lifting.

Chefchaouen, bus driver.

Navy Ammunition Depot, Hawthorne, Nev.

These drivers have no clutch; the gears are shifted automatically, according to the speed of the vehicle. A person with unassisted left leg could fill the duties of the position satisfactorily. Climbing trees might be difficult for a woman, otherwise there is nothing about the operation of these vehicles that would contrabindicate the employment of women in this position.

Cleaner, phonograph.

Sacramento Air Depot, Sacramento, Calif.

Worker can use a hand pistol to a rotating jig by means of a handy lifting wrist pin and a hand wheel. Starts machine by pressing button, applies polishing compound from third string and holds string tight to piston ring groove while piston revolves at a moderate speed, cleaning out any remaining small particles of carbon. Applies polishing compound to a rag and polishes top and sides of piston. Employee does not have to move amount as all work is done in one place.

Cleaner, spark-plug section.

Sacramento Air Depot, Sacramento, Calif.

Employee sits at a bench, puts one end of plug in a small hole in plunger, starts machine, and then and takes off the recommended carbon by applying sandpaper or every cloth to plugging cap. No tools used. It is possible to tell by sense of touch when one has been cleaned and polished. Work is brought to station and taken away for the worker. There is slight possibility of absorbing a small amount of lead from the carburetor point of carb. Location of work from standpoint of a blind person is good. Abilities are above and work place is not far from entrance door, door is level and clean. If a blind person is employed, he should have good hearing.

Clerk.**Clerk, junior.**

Main Post Office Building, San Francisco, Calif.

Duties involve answering the telephone, operating an adding machine, as well as filing, clerking, and typing duties. Little walking. One crippled hand, providing the ability to operate a typewriter is retained, would not disqualify. Deafness unacceptable, providing employee understands spoken directions.

Clerk, messenger.

Office of War Information, San Francisco, Calif.

Employee files also recordings. A drawer of recordings weighs about 200 pounds. He picks up lots of the discs, carrying them from one room to the other. Recordings (many are breakable) must be handled with extreme care. Employee carries them in a specially fitted suitcase from one studio to another in the city by way of car or on foot. Considerable traveling and climbing necessary.

Clerk, production traffic.

Office of War Information, San Francisco, Calif.

Ability to get hand out of the collar, using wheel chair if necessary, would be sufficient in considering physically handicapped persons.

Clerk, stock.

Post Office Garage, San Francisco, Calif.

Involves moving and distributing all types of automotive parts and supplies used in the operation, repair, and maintenance of Post Office automotive equipment. He checks and enters parts and material for shipment to outlying stations and depots where the lifting of objects up to 125 pounds is necessary. One hand basket and one crippled hand with good grasping power in the secondary hand, loss of one foot, with sufficient prosthesis, sufficient hearing to enable employee to understand oral directions, and sufficiently use a telephone, are permissible. Because of the heavy lifting involved persons with organic heart disease, fully compensated, those receiving penicillinotherapy treatment or having a history of tuberculosis may not be accepted.

Coiner, junior, bullion weighor.

United States Mint, San Francisco, Calif.

The bullion weighor weighs bulk gold and silver in bags and boxes on a large balance scale. The weights handled vary up to 75 pounds. There are no fumes or dust in the room. The environment is good. Junior coiners have no supervisory duties.

Coiner, junior, die setter.

United States Mint, San Francisco, Calif.

The die setter inserts and removes dies in coining machines. The work is light and requires good sight in one eye, manual dexterity, one intact hand, and good grasping power in the secondary hand. The tools used are wrenches, screw drivers, and hammers. There are no fumes or toxic dust in the room, but the environment is noisy. The junior coiners have no supervisory duty.

Coiner, junior, pressman.

United States Mint, San Francisco, Calif.

The pressman operates a press which trims ragged ends and edges of slabs of silver and copper after they have been removed from the molds. The duties require near vision in one eye, one fairly intact hand, and good grasping power in the secondary hand. Total deafness would not interfere with the proper performance of the employee's duties. The employee handles weights up to 70 pounds. There is a moderate amount of smoky fumes in the room. Junior coiners have no supervisory duties.

Coiner, junior, praver.

United States Mint, San Francisco, Calif.

The praver checks weights on blanks machined out of strips of metal. The employee manipulates fine balances. No tools are used. Physical requirements include one intact hand and good grasping power in the secondary hand, near vision in one eye. Hearing is unimportant. The duties are light. Junior coiners have no supervisory duties.

Coiner, junior, roller.

United States Mint, San Francisco, Calif.

The roller operator feeds slabs of metal back and forth through rollers until they are of the proper thickness. The work is arduous and noisy. Physical requirements include near vision in one eye, one intact hand, and good grasping power in the secondary hand. Hearing is unimportant. The employees stand all day, wear gloves to protect the hand from the strips, which become quite hot. The environment is free from dust. Junior coiners have no supervisory duties.

Coiner, junior, skilled workman.

United States Mint, San Francisco, Calif.

The skilled workman cleans, lubricates, adjusts, and repairs coinage machinery. This requires good near vision in one eye, normal hearing for ordinary conversation, one intact hand, and good grasping power in the secondary hand. Screw drivers, wrenches, hammers, and chisels are used. It may be necessary for the employee to help remove and replace parts of coinage machines, which are quite heavy. Junior coiners have no supervisory duties.

Coiner, senior, bullion weighor.

United States Mint, San Francisco, Calif.

The bullion weighor weighs bulk gold and silver in bags and boxes on a large balance scale. The weights handled vary up to 75 pounds. There are no fumes or toxic dust in the room. The environment is good. Senior coiners supervise junior coiners.

Coiner, senior, die setter.

United States Mint, San Francisco, Calif.

The die setter inserts and removes dies in coining machines. The work is light and requires good sight in one eye, manual dexterity, one intact hand, and good grasping power in the secondary hand. The tools used are wrenches, screw drivers, and hammers. No fumes or toxic dust in the room. Senior coiners supervise junior coiners.

Coiner, senior, pressman.

United States Mint, San Francisco, Calif.

The pressman operates a press which trims ragged ends and edges of slabs of silver and copper after they have been removed from the molds. The duties of a pressman require near vision in one eye, one fairly intact hand, and good grasping power in the secondary hand. Deafness would not interfere with the performance of the employee's duties. The employee handles weights up to 70 pounds. There is a moderate amount of smoky fumes in the room. Senior coiners supervise junior coiners.

Coiner, senior, pryer.

United States Mint, San Francisco, Calif.

The pryer checks weights on blanks punched out of strips of metal. The employee manipulates fine ledgers. No tools are used. Physical requirements include one intact hand and good grasping power in the secondary hand, near vision in one eye. Hearing is unimportant. The duties are light.

Coiner, senior, junior.

United States Mint, San Francisco, Calif.

The roller operator feeds slates of metal back and forth through rollers until they are of the proper thickness. The work is monotonous and noisy. Physical requirements include near vision in one eye. Hearing is unimportant. The duties are light. Senior coiner supervises junior coiner.

Coiner, senior, skilled worker.

United States Mint, San Francisco, Calif.

The skilled worker clears, lubricates, adjusts, and repairs rolling machinery. Physical requirements include good hearing in one eye, normal hearing for ordinary conversation, one intact hand, and good grasping power in the secondary hand. Screw drivers, wrenches, hammers, and chisels are used. It may be necessary for the employee to remove and replace parts of rolling machines, which are quite heavy. Junior coiner has no supervisory duties.

Coppersmith.

Marine Island Navy Yard, Mare Island, Calif.

Women could do much of this work satisfactorily. There are many problems in this craft that could be filled quite well by persons who are hands capped. There are others requiring work on board ship in which the employee must be agile, active, and able to get into small places and work in very cramped and difficult positions. Some of the copper-smiths never leave the shop; others spend most of their time aboard ship.

Custodian, assistant.

United States Post Office, Rincon Annex, San Francisco, Calif.

Duties are purely menial and require a great deal of walking. Employee has charge of the mailing station served by the Rincon Annex Post Office. Often visits these stations. Persons receiving penumbarous treatment or other type of radiopac therapy may be accepted. Sufficient hearing (whether or not supplemented by hearing aids) required to carry on a conversation and to use telephone.

Deckhand.

Fort Mason, San Francisco, Calif.

In regard to hands, one intact hand, with not less than 75 percent of normal grasping power in the other, is acceptable.

Dispatcher.

Post Office Garage, San Francisco, Calif.

Employee dispatches truck and delivery cars working from an office in the garage; he supervises flow of volunteer traffic in transfer of the mails from Rincon Annex to the Southern Pacific Depot. He performs some clerical work; checks replies.

Double-headed operator.

Alameda Naval Air Base, Alameda, Calif.

Women are more suitable for this position than men.

Draffman, marine, inside.

Fort Mason, San Francisco, Calif.

Draffmen, marine, inside, do not have to go on board ship to take measurements for repairs or alterations to hulls, engines, or superstructure. Their work can be done from specifications and notes provided them in their office.

Draffman, marine, outside.

Fort Mason, San Francisco, Calif.

Draffmen, marine, outside, must go aboard ship, crawl around the hull, go in and out of small spaces, through small openings, climb the masts, and be generally able to get heavy place on a ship, in order to take measurements for the preparation of drawings used in making repairs or alterations to the hull or superstructure. It is indicated that every employee in the marine office be able to do this.

Drop forger, heavy.

Drop forger, light.

Mare Island Navy Yard, Mare Island, Calif.

Women could perform some of the operations in connection with all classes of forging. There are levers on all of the hammers and presses that could be manipulated by women. This would necessitate some change in the operations of the team working at the particular machine. The difference between heavy and light forging here is that forging is not classified as "heavy" until the piece being worked weighs over 500 pounds and is 10 or more inches in diameter.

Electrician.

Main Post Office Building, San Francisco, Calif.

United States Post Office, Rincon Annex, San Francisco, Calif.

Employee repairs and maintains electrical equipment in the building. There is no exposure to toxic fumes, dust, or sudden severe changes in temperature. Occasionally it is necessary for the electrician to assist in lifting a motor (weight never more than 100 pounds).

Electrician's helper.

United States Post Office, Rincon Annex, San Francisco, Calif.

Employee assists in the repair, maintenance, and installation of new electrical equipment in the building, and does various odd jobs in the machine shop such as oiling, lubricating the equipment used in handling of mail, and makes minor repairs on same. Some lifting (up to 100 pounds) is required.

Electroplater.

Alameda Naval Air Base, Alameda, Calif.

There is present in the environment a moderate increase of humidity and fumes of an irritant nature arising from the tanks of acid material in which the objects to be plated are immersed.

Elevator mechanin.

Post Office and Courthouse Building, Los Angeles, Calif.

An employee with one sound upper extremity is acceptable, provided there is good grasping power in the crippled hand. This position is arduous and requires considerable physical agility and ability.

Engineer and trainee, radio.

Office of War Information, Recording Studio, San Francisco, Calif.

Employee works from 8:00 p. m. until 2:00 a. m. recording programs cut in discs, for the by broadcasting stations. Operator must time recordings, control the volume of sound by manipulating dials, etc., on a "mixer" operates the recording machines and through a small microscope (mounted on the recording machine) he observes the action of the cutting stylus on the record, by periodically studying the groove cut. Good near and distant vision in one eye essential; hearing in both ears is required. Due to the high tension under which these persons work, and the unusual hours, persons taking pneumothorax treatments would not be acceptable.

Engineman.

Main Post Office Building, San Francisco, Calif.

United States Post Office, Rincon Annex, San Francisco, Calif.

Duties of this position involve maintenance and repair of all equipment, including the elevators in the building. Due to prevailing shortage of employees the engineman takes care of his own department, and the electrical and plumbing work during emergencies or in the absence of the electrician or plumber. Employee must get in and out of tanks and boilers and clean same, assist in the maintenance of the electrical and telephone system where many of the wires are coded in color. Because lifting of heavy objects is involved, persons receiving pneumothorax treatment are not acceptable, but those with a history of tuberculosis may be accepted. Employee must also periodically check many motors and dynamos in the building and must be able to detect unusual noises. Good hearing is therefore essential, as well as color vision.

Engineman, assistant engineer.

Post Office Building, Oakland, Calif.

Employee supervises the work of the janitorial and mechanical staff in the building, keeps necessary records, takes care of and issues supplies, and assists in the performance of mechanical, electrical, and plumbing work in the building when no subordinate is available or when there is a volume of work. Employee is the only electrician in the building. Deafness, compensated by satisfactory hearing aid, and moderate hypertension will not disqualify.

Regenerator, chief.

Multi Post Office Building, San Francisco, Calif.

Duties of this position are ordinarily supervisory but due to the shortage of employees, the chief engineer must be able to do practically everything done by subordinates, such as working on the machinery and equipment, making repairs and adjustments to the electrical installations, and changing new circuits and when as directed.

Regenerator, Diesel, electrician.

Hawthorne Naval Ammunition Depot, Hawthorne, Nev.

The engine is operated by manipulating hand levers and push-pull buttons. The operator can sit down all the time. Good hearing is necessary, since the operators receive orders orally over a short wave receiver in the cab. Although the steps leading to the cab are steep, a person with one leg and two good hands and arms could get in and out easily. Free motion of the cervical spine is very important. Depth perception and color perception are essential. Vision should be not less than 20/30 corrected in both eyes.

Regenerator, marine.

Port Mason, San Francisco, Calif.

Duties of this position involve heavy mechanical work incident to ship repair and maintenance.

Filler.

Post Office Garage, San Francisco, Calif.

Employee will earn and checks with water, gasoline, oil, and checks tires and batteries. Persons with congested tuberculosis (or those receiving immunotherapy treatment) and/or moderate hypertension will not be disqualified.

Fireman.

United States Post Office, Rheem Annex, San Francisco, Calif.

Employee tends boilers, starts and stops the fire, burns wood in the boiler room, and assists the engineer in repairing and maintaining engine room equipment. Must be able to get in and out of, and work in small spaces. There are no exceptions to extreme changes in temperature, dust, or high fumes. Totally deaf persons may be accepted if they are able to understand written or spoken directions.

Fireman, marine.

Port Mason, San Francisco, Calif.

Fireman has to work in engine room repair and clean out the boilers when ordered.

Flange turner.

Mare Island Navy Yard, Mare Island, Calif.

Women could not be helpers in this craft.

Foreman, pier.

Port Mason, San Francisco, Calif.

The pier foreman directs and supervises the process of getting barges on and off the slips. The men work under the immediate supervision of gang bosses.

Gardener.

Post Office Building, Oakland, Calif.

Employee tends shrubs and lawns around the building, prunes trees, stakes and cultivate the soil, applies fertilizer to flowerbeds, and sprays trees and shrubbery at least three times a year with proper insecticides, none of which contain arsenic and lead. Deafness or moderate hypertension are not disqualifying. Permissible disabilities are loss of one eye, one hand lost and one crippled hand with good grasping power in the secondary hand.

Gas cutter or burner.

Port Mason, San Francisco, Calif.

One intact hand and good grasping power in the other sufficient for this work.

Guard.

Post Office Building, Oakland, Calif.

Multi Post Office Building, San Francisco, Calif.

United States Post Office, Rheem Annex, San Francisco, Calif.

Employee acts as guard and director for the public during the day; watches and patrols the building and performs the duties of watchman as well as guard at night; assists in running the elevators. Good sight in one eye and fair ability to see in the dark are essential as the building is blacked out during certain hours of the night. Disabilities permissible are the absence of one arm or absence of one foot (provided there is good prosthesis). Employee must be able to spend eight hours a day on his feet.

Heat treater.

Alameda Naval Air Base, Alameda, Calif.

Most of the articles handled are not heavy, and a chain hoist is readily available.

Helper, airplane mechanic (bolt sorter).

Alameda Naval Air Station, Engino Training School, Alameda, Calif.

This employee stands (or sits) before a rack on which are numerous metal parts into which he places various bolts, nuts, screws, washers, and pins that come off of the disassembled engine. The work can be done by the sense of touch entirely and at one certain place in the shop. The lay-out of the shop does not present any unusual hazard insofar as equipment or machinery is concerned. Blind persons can be employed satisfactorily in this position.

Inspector, Army ordnance material.

Chentungle Corporation Plant, Richmond, Calif.

The inspector, Army ordnance material, could perform the duties of this position with one hand intact and good grasping power in the other.

Inspector of hulls and machinery.

Field Service, United States Maritime Commission, Oakland, Calif.

These inspectors work in the shipyards inspecting boats during the course of construction, repair jobs, alterations, and improvements on various Maritime Commission boats. Their work requires them to get into every nook and cranny of a boat, from the compartments in the double bottoms to the tops of the masts. Some of the work, inspection of machinery and fittings, is done in machine shops where they are manufactured or repaired. This part of their activity is not strenuous and could be performed by an individual who has reasonably good sight in one eye and sufficient hearing to understand what is said to him. A totally deaf person could qualify for some of this machinery inspection work done in the shops.

Some of the inspectors must distinguish colors accurately, since the various electro cables have different colored coverings. The work in the double bottoms is very exhausting and it is said that even on cool days the temperature may reach 120° F. The atmosphere is very humid, and inspectors come out of these double-bottom tanks drenched with perspiration and very exhausted. If there is any burning or welding, the fumes tend to settle in the double bottoms, and this is an additional hazard. Near vision in one eye, sufficient to read blueprints, and vision of at least 20/40 for distance should be sufficient.

One hand intact is sufficient. This survey has indicated that a person with one arm and one leg could satisfactorily fulfill requirements. However, either two good hands and arms, with satisfactory artificial leg, or two good legs and one hand and arm are necessary.

Crawling through the compartments of the double bottoms requires a great deal of bending of the spine. Full and free movement of the neck and dorsal spine are necessary. The same applies to the shoulder and hip joints.

Blood pressure: The only hazard that might be experienced from excessive hypertension is the possibility of a cerebral accident occurring while working high up on the ship, with the resultant fall. For inspection in the shop and areas not involving the hazard, moderate elevation in blood pressure need not be considered.

Army ordnance inspection in private industry with Government contracts, Los Angeles, Calif.

Carter Hardware Co., Los Angeles, Calif.

Grayson Heat Control, Ltd., Los Angeles, Calif.

Byron Jackson Pump Co., Los Angeles, Calif.

Norris Manufacturing Co., Los Angeles, Calif.

The surveys of these positions were made on Government employees working in private manufacturing establishments inspecting ordnance-material supplies. The respective establishments were chosen upon advice of Army Ordnance Inspectors Service because they offer a greater opportunity to study various phases of inspection work than could be found in any Government establishment in this area.

Many of the operations of inspecting this equipment and supplies could be performed by women. The physical requirements for this inspection work varies greatly with the operation to be done. Certain inspection operations on projectiles and cartridge cases could well be done by persons who are both deaf, blind, without legs, and who possess a keen sense of touch, and a minimum grasping power in both hands. The material to be inspected by such handicapped persons would have to be brought to them.

Other inspection operations could be performed by persons who would merely have to sit at a bench, pick up the article to be inspected, insert it in a gauge, and then place it in the appropriate tray, depending upon the dimensions of the article. Some of the operations require very keen vision and the use of the hands plus very free motion of the body. Inspection of gun barrels, recoil mechanisms, come under this heading.

There are so many various steps in the inspection of ordnance materials and supplies that for a large group of inspection positions a person having aptitude for the work and any physical ability whatsoever could be utilized quite successfully.

Inspector of ordnance material.

Matchett Calenetting Co., Emeryville, Calif. (private industry).

The duties of this position do not require color vision. Instructions to change in procedure could be given by writing, hence hearing is immaterial. There is very little walking to do and no lifting of over 25 pounds weight. All operations involve use of vision or tactile sense, mostly tactile. An inspector with one intact hand and good gripping power in the other can do the work. Women are doing this work satisfactorily.

Inspector of ordnance material.

Felden Calenetting Co., San Leandro, Calif. (private industry).

The duties of this inspector could be done by a person who had lost both legs, provided he could hold himself over a stand high enough to permit his to work at a bench. One operation requires good color vision. All other operations are based on either vision or tactile sense. Under inspection is on a production line basis, where one person does the same thing all day without the necessity of changing to some other operation, good close vision is necessary. Many of the operations can be done by means of touch entirely however. It is necessary for an Inspector to occasionally write out a tag in a particular part. Normal hearing is not essential.

Inspector of ordnance material, bench.

Plant of Babbitt Lank Co., San Francisco, Calif. (private industry).

Inspectors with ability to get around even with crutches are acceptable when there is not much walking to do. Most of the work involves checking parts with gauges while in sitting position. All the inspectors require fairly good sight and use of two hands, or one hand fitted with good grasping power in the other hand. Normal hearing is not essential. The inspectors sit at benches and not wedges or perform tactile or visual inspections. The parts are inspected for size, placing defects, smoothness, and presence of burrs left from the machine operations.

Inspector of ordnance material, roving.

Plant of Schlage Lock Co., San Francisco, Calif. (private industry).

The roving inspectors roam through the plant carrying gauges with them and check unfinished parts as they come off the machines. These inspectors need good sight in one eye, one good hand and grasping power with the other, plus ability to be on their feet most of the day. Persons with one natural leg and a good artificial leg should be able to do this work satisfactorily if they have the other necessary physical qualifications. Women are doing this work satisfactorily.

Inventory checker (medium).

Richmond Shipyards No. 1, Richmond, Calif.

This employee checks miscellaneous supplies put on board a ship just before it is turned over to the operators. He is on his feet practically all day. Although he has to climb some ladders that go straight up, a one-armed man, with a good prosthesis, could do so with safety. A person with a leg amputated below the knee and fitted with a good artificial leg could also do the work. The same person should not have more than one amputation, however. There are no ladders from deck and superstructure and very little moving machinery. Persons with a history of arrested tuberculosis are acceptable.

Janitor.

Main Post Office Building, San Francisco, Calif.

United States Post Office, Rincon Annex, San Francisco, Calif.

Employee must be able to get around the entire building, do a certain amount of climbing on ladders and walking up and down stairs. In some establishments, he also does sign painting (ability to paint is not an absolute requirement, however), makes keys, repairs locks, and does minor items of

carpentry. Under present-day labor shortage, employee must relieve when there is heavy work to be done, or if a member of the force is absent or on sick leave.

Janitor, foreman.

United States Post Office, Rincon Annex, San Francisco, Calif.

Employee supervises 71 subordinates but is required to do a great deal of walking, climbing of stairs, and some climbing of ladders in order to inspect the building and check on the type of work done by those working under him. Persons receiving pneumothorax or other types of collapse therapy are acceptable. Sufficient hearing (may be compensated by a hearing aid) to understand conversation and satisfactorily use the telephone is required.

Joiner, ship.

Fort Mason, San Francisco, Calif.

Ship joiner, in addition to doing fine work with wood, has to be able to get about the decks and deckhouses. At Fort Mason, due to tidal conditions, there is a great deal of motion in the boats, even when tied up at the docks. This requires good control of the body and legs.

Junior architect, ship repair.

Port Mason, San Francisco, Calif.

Architects (Naval) at this establishment climb around on ships, before and during repairs and alterations. Ability to climb up and down vertical ladders and get around a rolling, tossing ship requires two intact hands and two good legs.

Laborer (bagging coffee).

United States Naval Supply Depot, Oakland, Calif.

This employee stands in front of an automobile bag-filling machine, places an empty bag under a spout, pulls the lever with the left hand to fill the bag, places the filled bag on a conveyor belt, guides the top of the bag into a sewing machine. The movement of the conveyor belt is controlled by pressure of the worker's foot on a pedal. Starting and stopping of sewing machine is controlled by further pressure on this same pedal. Sewn bags are taken off the conveyor by a helper. The worker stands in one place all the time. The material is brought and taken away. There are no hazards in the environment. The work is ideal for a blind person.

Laborer (baling salvage materials).

Quartermaster Salvage Subdepot, Oakland, Calif.

Employee places salvage cloth in press with piece of fibre board top and bottom, and wires the compressed bale tightly with lengths of baling wire. Press is manually operated. When press is filled, bales are removed from press, weighed, and stacked.

Laborer (classifier).

Quartermaster Salvage Subdepot, Oakland, Calif.

Employee separates articles that can be repaired or reclaims from those suitable for use as salvage material. Part of the work is performed standing; part is sedentary. Good grasping power in secondary hand is necessary. Due to the dust in some of the articles handled, persons having a history of tuberculosis are not acceptable.

Laborer (examiner).

Quartermaster Salvage Subdepot, Oakland, Calif.

Employee inspects garments and articles that have been repaired to determine whether or not the work has been properly done. Work is partly performed standing, partly sedentary. Color vision is important.

Laborer (forming bases).

Paint Factory, Can Making Division, Mare Island Navy Yard, Mare Island, Calif.

The employee places strips of heavy wire in a forming machine to make bases (or handles) on paint buckets. Both hands are used to manipulate levers, and two pedals are manipulated with the feet. The formed bases are removed from machine by hand. The employee sits at his work.

A blind person might be able to perform the duties of this position except for the rule made by the safety engineer that operators of the various machines in the plant interchange duties every few hours.

Laborer (jacket stuffer).

Mare Island Navy Yard Salt Loft, Mare Island, Calif.

This employee stuffs quilted kapok pads into canvas life jackets worn by Navy personnel. The duties are performed at a table. The jacket is laid

out, and four pads are placed inside, one in the neck, one in the back, and one in each side of the front. The material is brought to the operator, and the finished or stuffed jacket is taken away. There is no special hazard in this work for a blind person, and the work is ideal for one so handicapped. Due to the presence of a slight amount of dust in the air, this position is not satisfactory for anyone with arrested tuberculosis. The employee should not be both deaf and blind.

Laborer (holding canvas strips onto stanchion buck frames).

Port Mason, Calif.

This employee stands at the side of the steel frame of the tank and fastens a strip of canvas to the frame by passing a one-fourth inch rope through grommets and around the steel tubing of the tank. The work itself is ideal for the blind; however, certain modifications in equipment must be made before considering the employment of the blind.

Laborer (making cargo and debarcation nets).

Port Mason, Calif.

The duties of this position are largely sedentary in nature. The nets are made of 3/8-inch rope spaced about 6 to 8 inches apart. One rope is split and the crossing piece threaded through, then bound firmly with heavy twine. The ends of the ropes are looped; this loop is made by putting a nippers into the bane of the loop. The work of putting the nets together can be done easily by blind persons. The present location of the work offers a hazard to the blind, because it is on a pier surrounded on three sides by deep water. There is no other obstacle to employment of blind in this work.

Laborer (marking and tying).

Quartermaster Salvage Subdepot, Oakland, Calif.

Employee grades article for quality, measures for size, and marks size and grade on garment or article with rubber stamp. Work is performed standing at a bench.

Laborer (packing).

Quartermaster Salvage Subdepot, Oakland, Calif.

Employee puts garments or articles into cartons for shipment. Usually only one size of the same article will be put into the same carton. This might be marked in Braille type and some of this work could be done by blind persons.

Laborer (salvage).

Quartermaster Salvage Subdepot, Oakland, Calif.

Employee obtains odds and ends from garments—buttons, buckles, and usable articles—also pockets or portions of cloth to be used for patching. Some of this work could be performed by blind persons if means to location of work in the plant is good, odds are clean, and tools are clean.

Laborer (sorting bolts, nuts, and screws).

Alameda Naval Air Station, Alameda, Calif.

This laborer's duties could be performed by the blind. In a group of five workers, four could be without sight. The present location of the work table might have to be changed to remove a hazard to blind people in getting in and from the place where the work is done.

Laborer (stuffing kapok into life jackets).

Mare Island Navy Yard Plug Loft, Mare Island, Calif.

This employee sits at a table and stuffs kapok into the inside liners of life-jackets. The material is weighed on a copper balance, which can be operated readily by the sense of touch. The materials are brought to the workers at the tables, and fibropol pieces are taken away. This work is well suited for the blind. Aides and visitors in the loft are kept clear so that access to the inventory, ingress and egress to location of work, do not present any particular hazards to a blind person.

Laborer.

Main Post Office Building, San Francisco, Calif.

Post Office Building, Oakland, Calif.

United States Post Office, Mission Annex, San Francisco, Calif.

Employee washes and polishes walls and ceilings, sweeps, moves furniture, washes windows by sitting on the window sill and leaning out to wash the glass. Sashes attached to the window frame are made of aluminum and consequently are considered unsatisfactory for use with a safety belt. Scrubs floors, cleans sidewalks, keeps roof gutters free from debris, and does any other heavy unskilled work required in the operation and maintenance of the building. Moderate hypertension will not disqualify.

Laborer, classified, assembling hose clamps.

San Diego Naval Air Station, San Diego, Calif.

Employee assembles hose clamp parts, inserts bolts and nuts and sizes the clamps on a vertical step-tapered gage. Working conditions are such that the parts can be brought to the worker and the completely assembled clamps can be taken away. There is a minimum of moving around. Location of work is readily accessible, aisles are clear, floors clean, and working conditions are good. Hearing is of little importance except a blind person should have good hearing. Work is almost entirely sedentary.

Laborer, classified, cleaning spark plugs.

San Diego Naval Air Station, San Diego, Calif.

Duties involve reconditioning spark plugs which have mica cores. Spark plugs are first removed from carbons, core is separated from the body of the plug, and the copper washer is removed. The soft rubber cap placed over the threads to protect them from the solutions in the parkerizing process, is applied by placing the plug in a quick-acting chuck operated by an electric drill and bringing the plug down onto the cap held in jig on the work bench. The chuck automatically slips when proper tension has been reached. The electrodes are placed in a chuck operated by a small electric motor and are cleaned by applying every cloth to them as they revolve in the chuck. Rubber caps are removed from the parkerized body of the direction of the motor. Plug is assembled and put into a machine which checks and corrects the gap distance between electrodes. It is inspected, placed in a cellophane envelope (the end of which is folded twice), sealed by the application of low temperature heat. Sealed envelope is then placed in an individual carton. These operations require various finger and arm movements, but one intact hand with good grasping power in the secondary hand would be acceptable. Operations which could be performed by blind persons are: Removing plugs, taking off washers, capping, removing caps, cleaning electrodes, reassembling, placing in envelope and sealing, placing in cartons, and sorting washers for size. No employee who is both blind and deaf should be employed.

Laborer, classified, dock seaman.

Port Mision, San Francisco, Calif.

One intact hand and good grasping power in the other are sufficient to perform duties of this position. Motion of both wrists, elbows, and shoulders should be free in all planes. Up to 25 percent disability in one leg would not interfere with proper performance of duties.

One man was observed working this job with a good right hand and the fingers of the left hand off at the metacarpophalangeal joints. With left thumb intact, he had about 25 percent grasping power. He worked almost as efficiently as the other men, and his output was higher.

Laborer, classified, sorting bolts and nuts.

San Diego Naval Air Station, San Diego, Calif.

Employee sits at a bench and separates, by means of magnets in a large machine, the ferrous and nonferrous items. He, together with a group of workers sitting around various tables, sorts the items according to size, shape, and general condition. This is ideal work for the blind as it can be done entirely by tactile sense and a minimum of moving about is required. Blind workers should have good hearing. Two good hands are required. Aisles are clear; floor is clean; location of work is readily accessible.

Laborer, classified, spark-plug cleaner.

San Bernardino Air Depot, San Bernardino, Calif.

Employee removes plugs from cartons in which they were packed, visually inspects them for gross defects. Plugs which can be reconditioned are sandblasted to remove carbon from around the electrode, threads on the plugs are then bristled on a revolving wire brush, and the threads inspected for defects. Body of the plug is painted, the interior is inspected for defects in the porcelain, new washers are applied, the plugs are given a final inspection and wrapped in pieces of paper, then inserted into cardboard cartons. Employee may have to walk short distances from one bench to another. Work is broken down into a number of different parts which have about the same physical standards. There is some lifting of filled trays (weighing approximately 25 pounds) involved but practically all the work is sedentary in nature. Blind persons could remove the plugs from the cardboard cartons, buff threads, and replace the plugs in the carbons.

Laborer, press operator (former bottom).

Paint Factory, Can Making Division, Mare Island Navy Yard, Mare Island, Calif.

The operator sits before a press, cuts strips of sheet metal between die, and operates the press by means of a foot lever. The environment is good. There are no fumes or toxic elements in the air, and the noise is not excessive. The location of the press does not subject the operator to sunlight or severe atmospheric changes.

Laborer, press operator (former rib).

Paint Factory, Can Making Division, Mare Island Navy Yard, Mare Island, Calif.

This employee places the welded side of a bucket in a press, tugs the end of the weld with a hammer to bend it outward. The press is operated by foot; the bucket is removed from the press and placed on top of the bottom, then the bucket is set with the bottom in a press with roller conveyor.

Laborer, roller.

Paint Factory, Can Making Division, Mare Island Navy Yard, Mare Island, Calif.

This employee feeds cut sheets of metal into rolls to form the sides of buckets. Both hands must be in good functional condition. A person with two good artificial legs could do this work.

Laborer, spark-plug section.

Sacramento Air Depot, Sacramento, Calif.

Employee opens small cartons containing the individual spark plug coming back to the station for overhauling. Work is brought to the employee and his finished work is taken away. Spark plug is removed, plug is placed in a rack and empty carton is dropped into a basket. No tools are used. Hearing sufficient to receive instructions regarding how to do the work is sufficient.

Lampist.

United States Post Office, Rincon Annex, San Francisco, Calif.

Employee cleans, washes, and installs lamps throughout the building, reducing worn-out electric light bulbs. A considerable amount of ladder work is involved as it may be necessary for employee to reach lamps in the ceiling about 10 feet from the floor. When employee stands on a high ladder, 6 feet or over, a fellow worker stays with him.

Lay-out man.

San Diego Naval Air Station, San Diego, Calif.

Employee makes photographic catalog of all parts of airplane. Sub-assemblies are photographed on one position in the background and the parts making up these sub-assemblies are photographed on part of the same background so that the sub-assembly and its integral parts may be shown on the same plate. Envelope must be fully strong and rigid and in good physical condition in order to disassemble the object and obtain the various parts to be photographed. Some lifting is involved in order to create a complete assembly for certain needed section of planes. It is necessary for the photographer and his lay-out man to crawl around inside the plane, often into some very small places. Good grasping power in ordinary hand is essential.

Machinist.

Post Office Garage, San Francisco, Calif.

Employee does the precision machine work necessary to overhaul automotive equipment. The usual machine shop equipment is used such as lathe, drill-press, boring bar, etc. All work is done in the shop and at a bench. Moderate hypertension will not disqualify but organic heart disease (fully compensated) is not acceptable due to a certain amount of lifting required to handle motor blocks and other heavy automotive parts.

Matron.

United States Post Office, Rincon Annex, San Francisco, Calif.

Employee cleans and keeps in order washrooms and rest rooms. She must be able to be on her feet for 8 hours.

Mechanic, automobile.

Post Office Garage, San Francisco, Calif.

Employee does complete repairing and major overhauling of all automotive equipment used by the Post Office Department, when equipment is out of service. Work is all done in shops. Hearing must be good in one ear for ordinary conversation; moderate hypertension is not disqualifying. Persons

with a history of tuberculosis and those receiving pneumothorax treatment are not acceptable, because employee must crawl underneath the equipment and frequently lie on the concrete floor where they may be subjected to severe draft conditions.

Mechanic, box.

United States Post Office, Rincon Annex, San Francisco, Calif.

Employee repairs mail boxes located at various points in the street or in buildings, lifts and moves boxes from the street, lifts them off the pedestals and puts them on a truck. Large damaged storage boxes have to be brought into the shop via truck and lifted thereon. Some of the boxes (empty) weigh up to 250 pounds. Employee cleans and straightens the metal and in general does automobile repair work comparable to the work done by a fender repairman in an automobile repair shop. However, the sheet metal in these boxes is of a much heavier gauge than that used in automobile fenders, and some of the boxes used for letters and attached to poles by means of brackets are made of cast iron. These small boxes weigh up to 75 pounds. Except for picking up and placing boxes on the streets, the work is done entirely in the shop.

Mechanic, canceling-machine.

United States Post Office, Rincon Annex, San Francisco, Calif.

Employee cleans, oils, adjusts, and maintains, as well as repairs, the canceling machines. Machines weigh about 300 pounds and are repaired in a special shop equipped for that purpose. To repair them, they must be lifted by 4 men on to a dolly and taken into the shop on the same floor. Employee usually assists the men doing this, but in the event he can do no lifting, assistance could be given by others. Total or partial deafness are not disqualifying.

Mechanic, carburetor.

San Diego Naval Air Station, San Diego, Calif.

Employee sits at bench and works on carburetors of airplanes; disassembling, cleaning, adjusting, and reassembling. Weights listed occasionally amount to 60 pounds. Tools used are screw driver, hammer, wire cutter, and small wrenches. One intact hand and good grasping power in the secondary hand are essential; hearing sufficient to understand directions. Environment is good. There are no toxic elements.

Mechanic, conveyor.

United States Post Office, Rincon Annex, San Francisco, Calif.

Employee repairs and maintains conveyor belts used in shifting the mail from one end of the building to another. He must get in and out of small spaces, climb ladders, and be quite agile. Hearing must be sufficient for ordinary conversation.

Mechanic, elevator.

United States Post Office, Rincon Annex, San Francisco, Calif.

Employee repairs and maintains elevator equipment in the building. He rides on the top of cars, checking the cables and guides and cleans and lubricates them; also works on the machinery and equipment in the various elevator penthouses. Good hearing, a sense of balance and sure-footedness are required.

Mechanic, general.

Post Office Building, Oakland, Calif.

Employee repairs, maintains and adjusts all mechanical equipment used in the Post Office including adding machines, typewriters, canceling machines, scales, motors, door locks and closers, furniture, electric wiring, and plumbing. He assists in doing all necessary maintenance and repair work on the elevators, except the replacement of the cables. He is required to be able to drive a truck delivering furniture, letter boxes, storage boxes, and the concrete poles on which some of the letter boxes are attached. He repairs and cleans lock boxes and letter chutes in privately owned buildings, does carpentry work such as building partitions and making cases for use in distribution of mail. Heavy lifting is involved. Hearing must be good in one ear for ordinary conversation; moderate hypertension will not disqualify.

Mechanic, general.

Post Office Garage, San Francisco, Calif.

Employee lubricates, adjusts and services cars and trucks which are in service. Persons with moderate hypertension are acceptable.

Mechanic, radio.

San Diego Naval Air Station, San Diego, Calif.

Employee sits at bench practically all of the time. Very little walking is required. An operator who can sit equipped may be considered if work is arranged so as to require a minimum of moving. Tools handled are small. Tools used are wrenches, renew drivers, and pliers. Environment is good. There are no toxic elements nor unfavorable environmental conditions. Hearing sufficient to understand spoken directions, even with a hearing aid, would be acceptable.

Mechanic, radio.

United States Post Office, Huron Annex, San Francisco, Calif.

Employee repairs, adjusts, and maintains various mechanisms in repairing mail; most of the work is done at a bench. However, the employee is also required to repair and adjust various lattice platforms which capacity up to 100,000 pounds. Work on the platforms requires him to crawl into narrow confined spaces underneath the platforms and under machinery, equipment, and instruments. Environment is good; there are no exposures to excessive changes in temperature, toxic fumes, dust or vapor. Efforts to be permissible provided the applicant is able to understand written or oral directions.

Mechanic, typewriter.

United States Post Office, Huron Annex, San Francisco, Calif.

Employee repairs, adjusts, maintains typewriters, and other delicate computing equipment; work is done at a bench. Accordingly, the employee has to lift or carry a typewriter. Persons receiving penicillinotherapy or other types of collapse therapy may be accepted if very little lifting is required. Sufficient hearing to understand oral directions is necessary.

Melter, electric.

United States Mint, San Francisco, Calif.

The melter, electric, is required to watch diligently an indicator of electric gages in order to control the heat of the melt. Good distant vision in both eyes is necessary.

Melter, junior.

United States Mint, San Francisco, Calif.

The junior melter, junior, refines, matches, furnaces, hammers, or electrically assembles and sets the molds, lifts the mold from the pouring table onto the cooling table, and drops molten tin molds. Heavy gloves are worn to protect the hands from the heat. The tools used are pointed bar about three-eighths inches thick and 12 inches long, short hammer, and a hand file for straightening the end of the United States Treasury coin gold or silver bars. The work is arduous, and the employee may have fatigue of the hands, arms,肩膀, feet, and legs. Good vision in only one eye is accepted; hearing is indispensable. The employee may sit down part of the time while performing their duties.

Melter, senior.

United States Mint, San Francisco, Calif.

These employees work around furnaces that are heated either by natural gas or electricity.

The senior melters put the tinplate and scrap metal in order for melting the molten metal out, and pour it into molds. Metal is dipped by use of a graphite stick held in steel jaws. The forces used total weight about 10 pounds and results 10 to 16 pounds of mostly degassing, on whether it is gold or silver. Binocular vision of not less than 20/20 in one eye and 20/100 in the other eye, with depth perception, is required. One intact hand with very slight deformity of the armature, jawed, is acceptable. The mold is poured into open molds about 1½ to 2 inches for gold, and into closed molds having a throat of about 1½ to 2½ inches for silver. A smoky haze permeates the atmosphere, but there are no fumes or toxic dust in the room. The employee may sit down part of the time while working.

Mess attendant.

United States Veterans' Facility, Rawlins, Calif.

The mess attendants in this establishment are required to clean the cleaning and janitorial work in and around the mess hall, gift shop, store room, refrigerator boxes, and serving platforms. The employee is expected to climb up on the steel girder supporting the skylight, work the skylight glass, electric lights and their suspending chain, wash the walls from the floor to the ceiling, mop and wax the floors, clean the lining rods in the refrigerator boxes, take into and over the greasy foods on the range, push heavy, loaded dollies along the corridor, and lift them on and off the elevators.

The mess attendant receives goods such as sacks of flour, potatoes, and sugar, crates of oranges and eggs, trucks them to the various storerooms, and places them there. The employee is expected to keep an accurate record of material received and items supplied to the cooks.

Certain phases of this work are quite arduous and require considerable physical strength, but some of the work of mess attendants can very well be performed by women. The dangerous and arduous duties should be performed by men who are experienced and physically well qualified.

Metalsmith, aviation.

Alameda Naval Air Base, Alameda, Calif.

Most of these positions could be filled by women, and in the majority of cases the work can be done sitting down. In this shop those who operate the power hammers, presses, and other small machines, together with workers who form the metal by use of hand tools, are classified as metalsmiths, aviation. **Munitions worker, female.**

Berkeley Arsenal, Berkeley, Calif.

At this plant "munitions worker" covers many classes of work. Some of it is purely storekeeper work, some classified labor, such as loading and unloading cars and trucks. Others operate hand machines placing cartridges in the curves or metal link belts, placing the filled belts in boxes, soldering the boxes, marking them, and stacking them in the magazines. The physical fitness requirements vary according to the work being done; some workers need two hands, some could do with one arm and one hand, some need only one leg, and others doing lifting require two.

Naval Inspector, extrusion press.

Naval Inspector, forge shop.

Naval Inspector, foundry.

Naval Inspector, laboratory.

Naval Inspector, shipping.

Aluminum Company of America, Vernon, Calif.

Employee may be stationed in the foundry, in the extrusion press room, in the rivet factory, in the laboratory, in the various shipping rooms, or inspecting finished pieces. Inspector must be able to use a steel die and hammer in order to put the Navy stamp on the various test pieces which are taken from the stock and subjected to physical and chemical tests in the testing laboratory operated in the plant. One or two positions, where purely visual inspection is involved, require that a person have good sight in one eye and at least one arm. Other positions require one good hand and good grasping power in the secondary hand, or the wearing of an extremely good prosthesis in lieu of the secondary hand. The foundry is very antiquated, ventilation is poor, and employee working here is exposed to extreme temperatures; there is considerable dust in the atmosphere at all times. Employee working in the forge shop is subjected to extreme heat and a great deal of dust and fumes. The inspector working on the cutting floor and in the extrusion press room must have the use of two hands, the ability to walk and be on his feet for 9 hours a day, and at least have one good eye for near vision. Due to constant traffic of overhead cranes, employee should have either good hearing in one ear or if deafened, should have good sight in both eyes with a fairly broad visual field in order to be constantly on the alert against injury from these overhead cranes. All of the work requires a certain amount of writing. In the large shop, weights handled of necessity by the inspector may go up as high as 40 pounds. There is a great deal of walking, some of it rather rapid at times, but no stairs or ladders to climb; floors are level; footing is very good. This also applies to the foundry, and a concession could be made here for hearing if the employee has good vision in both eyes and has had some years of practical foundry experience. To avoid injury, inspector has to be able to keep out of the way of workmen moving very fast and trundling small sledges of molten metal around on little carriers. Good near vision in at least one eye is essential in all of these positions as the inspection involves careful surface inspection plus the use of a steel rule and micrometer. There is one position in the laboratory in which the inspector simply observes the results of tests done by company employees on the samples of material; he records those tests. A person with one arm and satisfactory vision in one eye could do this work satisfactorily. Inspector remains in the same plant during his entire shift.

Naval Inspector, Altec Imperial Diesel Engine Co.

Office of Inspector of Naval Material, Oakland, Calif.

Employee checks engine parts shipped out as replacement and inspects each engine while it is on the assembly line. Then checks and inspects the engine during an 8-hour run before giving final approval. This test requires employee to do a little climbing on to a stand surrounding the engine; order to read gages and sticks. Hearing sufficient to use telephone and understand ordinary conversation (use of a hearing aid permitted) would be acceptable. Industrial hazard is slight exposure to engine oil. There are no dusts, fumes, or other toxic products; environment is good; moderate changes of temperature. Tools used are steel die, hammer, micrometer and calipers.

Naval Inspector, Automobile-Screw Machine Co.

Office of Inspector of Naval Material, Los Angeles, Calif.

Duties are chiefly sedentary; there is practically no lifting. Inspecting done using micrometers and snap gages. Practically all the work could be done by use of snap-and-go or no go gages. Hearing sufficient to understand directions (hearing aid permitted) would be acceptable. There are 10 hours each week of toxic fumes; working conditions are good. Inspectors remain in the same plant during their shift.

Naval Inspector, Axlebox Manufacturing Co.

Office of Inspector of Naval Material, Los Angeles, Calif.

Duties involve machine shop construction of finished machine parts. Employee has to spend a small amount of time in the factory connected with the machine shop where he is exposed to dust and fumes. Otherwise working conditions are excellent; tables are clean and floors are clean. Environment, good. Entire shift spent in this plant.

Naval Inspector, Beach-Ross Tool Co.

Office of Inspector of Naval Material, Los Angeles, Calif.

Inspector spends considerable walking in this factory which produces various machine shop products. Environment is good; that is, low, no human hazards, no toxic fumes, dust, or gas. No sudden extreme change in temperature. Inspector remains in plant during entire shift.

Naval Inspector, Bethlehem Steel Co.

Office of Inspector of Naval Material, San Francisco, Calif.

Employee keeps record of tests and shipments, checks furnace for hot and alloy content, checks metal while it is being rolled, watches for excessive scaling, too low temperature, deformities, or other defects. Inspectors operations in the mill involve a small amount of static climbing and a great amount of walking. Some inspectors also have to climb up and around a railroad flat and gondola cars to check equipment. Sample pieces are tested in a laboratory by placing them in a torsion machine and noting points at which changes such as bend, plasticity, deformity, and fracture occur. This requires hand and finger movements, of a coarse type, with ability to correctly read gages and instruments. Navy stamp is placed on part, by means of steel die and hammer. Exposure to dust, fumes, gases, or extreme temperature changes are negligible. Lifting not necessary of the product.

Naval Inspector, Columbia Steel Corp.

Office of Inspector of Naval Material, Pittsburgh, Calif.

Employee inspects in the foundry, steel castings, chilled, just after they come out of the moulds. They have to be checked for size, distortion, misruns or other defects (some are often of a "hair line" size and require keen sight for their detection). Floor of the foundry is littered with castings of all sizes and shapes and the inspector must step over, in between, and around these pieces of metal, which, however, do not always cause a severe burn when touched. He inspects the moulds, cores, and patterns used to casting, checks the wire bar and rail mill operations and finds products, weighing and testing to destruction samples chosen at random in a laboratory in the plant. A hammer and steel slab are used to break the test pieces. Industrial hazards: Dust, fumery and some emery or carburettants present in the foundry danger to the eyes from flying chips, although this hazard is overcome to a great extent by the use of safety glasses required for entry to the foundry floor; temperature changes, the sudden changes of temperatures experienced in going from the foundry floor around hot castings and annealing furnaces to the outdoors and the cold given off the by moulds and cores constitute a serious hazard for anyone having a previous history of respiratory disease such as tuberculosis, bronchitis, and bronchiectasis. Inspector must read X-ray

and there is some very slight risk of exposure to Roentgen rays and radium emanations. Overhead cranes and the usual risks attendant upon the handling of molten metal in large quantities are the other hazards in this position. Possible handicaps allowable: One deformed hand if good grasping power in secondary hand, loss of one eye (if applicant has had previous satisfactory foundry experience to make sure that he is sufficiently aware of the dangers of the job), loss of hearing in one ear (if experience is sufficient, etc.), loss of one foot or crippling condition of one leg, provided applicant is active and can get around well. There is a great amount of walking to be done. Heart disease, organic (if well compensated) is acceptable; color blindness is unacceptable.

Naval Inspector, Pittel McCullough Co.

Office of Inspector of Naval Material, San Bruno, Calif.

Duties involve careful inspection of radio tubes of various makes. Employee must detect minute defects and does electrical testing for short circuits. Tubes must be tightly grasped to test for tightness of base; depth perception is necessary to judge grid position, and appreciation of delicate shades of colors is essential in doing some of the electrical tests. There are exposures to severe and sudden changes in temperature in going from the factory proper to the inspection room and prolonged colds may be frequently contracted. There are no fumes, dusts, or toxic hazards. Lifting does not exceed 25 pounds. Stair climbing is moderate.

Naval Inspector, Enterprise Foundry.

Office of Inspector of Naval Material, San Francisco, Calif.

Employee inspects castings of steel, brass, and aluminum, examining for various defects. This requires walking through foundry and machine shop, handling pieces of metal, and occasional lifting. Inspector can require contractors' employees to help him do any heavy lifting. Inspection of machined parts requires use of steel rule, gages, calipers, and micrometers. There is some exposure to foundry dust; fumes, temperature changes, or toxic hazards are practically negligible. A considerable amount of walking is required on moving surfaces; no climbing of ladders or stairs. Use of steel die and hammer and keeping of clerical records are included in duties.

Naval Inspector, General Cable Co.

Office of Inspector of Naval Material, Emeryville, Calif.

Inspector checks manufacturing processes, inspects and tests finished cables and manipulates controls on electrical test panels, and reads instruments and dials thereon. Keen color sense is essential. Due to high voltages of objects being handled in these tests, an inspector must be mentally alert to avoid accidents to himself or others. There is slight exposure to toxic effects of chlorinated hydrocarbon vapor. About 5 hours of the day are spent on foot, testing and walking around the plant; balance is desk work. There are no hazards from sudden excessive changes of temperature or dusts. Some of the testing instruments require hearing sufficiently keen to hear a wrist watch tick close to the ear.

Naval Inspector, General Metals Corp., plant.

Office of Inspector of Naval Material, Oakland, Calif.

Employee lifts castings as heavy as 250 pounds in order to inspect them when called upon to expedite the work and if a labor shortage exists. Tools used are hammer and steel die, foot rule, and calipers. Inspector checks the clamping of the fixtures, mouth, patterns, cores, and finished castings. Environment is good, foundry floor is level and well kept. Some hazard due to sudden changes of temperature, dust on the molding floor, and overhead cranes. No fumes or toxic elements present. Sufficient hearing is required to understand ordinary conversation and to use the telephone (hearing aid may be used.)

Naval Inspector, General Metals Corp.

Office of Inspector of Naval Material, Los Angeles, Calif.

Employee inspects heavy forgings. There is some danger from overhead cranes, fumes, and gases, and at times the employee is exposed to very high temperatures and sudden changes.

Naval Inspector, Goodyear Tire and Rubber Co.

Office of Inspector of Naval Material, Los Angeles, Calif.

Inspector has to crawl through a small opening inside self-sealing gasoline tanks (for airplanes) and thoroughly inspect the interiors. This requires that a person be well-proportioned, agile, and active. Hearing sufficient to use a telephone and to understand oral directions is acceptable. Employee spends entire shift in this plant.

Naval Inspector, Grove Regulator Co.

Office of Inspector of Naval Material, Berkeley, Calif.

Inspector checks materials and parts for compliance with specifications, observes tests on finished valves and regulators run by contractor's employees and records same. Duties involve considerable standing and walking, and desk paper work for about 2 to 3 hours a day. There is no lifting nor toxic exposure nor sudden severe changes in temperature. Sufficient hearing is required to use telephone and understand ordinary instructions.

Naval Inspector, Hull Scott Motor Co.

Office of Inspector of Naval Material, Berkeley, Calif.

Inspector checks engine tests, small parts, finished engines, and shipments of material to various naval installations. There is a great amount of walking to do, but no climbing of stairs or ladders, and employee is not exposed to photo or toxic materials. About three-eighths of employee's time is spent doing desk work. Vision must be sufficiently keen to read a micrometer, possibly with the aid of a magnifying glass. Sufficient hearing is required to understand directions and converse over the telephone.

Naval Inspector, James Wells Co.

Office of Inspector of Naval Material, Los Angeles, Calif.

Duties involve visual inspection only, mainly benchwork of pieces and parts of planes. No unusual hazards either from dust or fumes, or sudden changes of temperature. Working conditions are good. Simple go/no-go and no-go gauges are used. Employee spends entire shift at the plant.

Naval Inspector, Abrahamsen Manufacturing Machine Co.

Office of Inspector of Naval Material, Encino, Calif.

Most of the operations of gaging the parts are done by tactile sense only, using a go and no-go gauge; work performed at a bench and is brought to employee and taken away requiring very little movement. Inspector's eye is near the plant's door, aisle is free and clear. Working conditions are good, parts handled are small. Some blind persons could be employed but they should not be both blind and deaf.

Naval Inspector, Memavox, Inc.

Office of Inspector of Naval Material, Los Angeles, Calif.

The parts of the electrical recording apparatus manufactured here for radio receiving sets to be handled by the employee are small; lighting is good; no measurable environmental factors are present. Person with one arm and one eye and able to walk around could qualify for this position. Double shift is spent at the plant.

Naval Inspector, North Stamping and Manufacturing Co.

Office of Inspector of Naval Material, Los Angeles, Calif.

Employee inspects shell cases and condensers for shells, and works on a line. Some vision is required so there is some shifting from one position to another in the same line. One inspection operation could be done by a person having only one arm. Inspector is stationed at the plant all day.

Naval Inspector, Sawyer Electric Manufacturing Co.

Office of Inspector of Naval Material, Los Angeles, Calif.

Inspector examines bronze castings, checks measurements with a micrometer, and observes results of tests on finished products conducted by the company employee. There are level, no toxic materials in his laboratory which are clear and footing is good; no stairs or ladders to climb; no lifting required. Considerable walking is involved. Sufficient hearing is required to understand ordinary conversation not to use the telephone. Inspector spends practically all of his time in plant, leaving only to make visits to the central office.

Naval Inspector, Simonson Co.

Office of Inspector of Naval Material, San Francisco, Calif.

Employee checks bills of lading, contract specifications, inventories, procurement reports, and related clerical work; visually inspects the various manufactured articles produced in the plant, such as life jackets, ship furniture bags, mattresses, and springs. Finished articles are inspected and checked for correct marking. Carried lot items inspected by the end for proper loading and quantity of material. They are sealed with banderol and stred dit. Work is physically arduous, about 95 percent of time is spent on feet walking or straining in shops and factory. No unusual industrial hazard from fumes, dusts, or severe changes in temperature.

Naval inspector, Sound Equipment Corp.

Office of Inspector of Naval Material, Hollywood, Calif.

Inspector checks various telephone equipment for airplanes. Essential are vision in one eye, acute hearing, and ability to detect high pitched sound. Most of the work is done sitting down; a person able to get around to some extent could do this work. Employee spends entire shift in this plant.

Naval inspector, Southwest Welding and Manufacturing Co.

Office of Inspector of Naval Material, Alhambra, Calif.

Inspector must be able to crawl into large pressure vessels (size from 15 feet in diameter by 80 to 100 feet in length) which are pretty well filled with pipes and tubes which make the clearance in some of them quite small. He must also climb around on the outside of these tanks requiring that he be agile and sure-footed. No dusts, toxic fumes, or sudden changes of temperature are present. Hearing should be sufficient to use the telephone and to understand ordinary conversation; one intact hand with good grasping power in the secondary hand is required. Inspector spends about one-third of his time in plant, and balances in other plants.

Naval inspector, Standard Oil Co. Refinery (officer).

Office of Inspector of Naval Material, Richmond, Calif.

Duties involve obtaining samples of the products used in filling Navy orders, checking correctness of shipments as to kind, quantity and quality, and checking containers for contaminants. Employee is in either of two classes. He may work in the refinery which involves a great amount of walking, climbing of stairs, and walking on a narrow gangway to inspect and to check filling tank cars and trucks. These gangways are slippery and have no side rails, and in wet weather, footing would be most insecure. Employees on tankers must be able to climb up on top of a large storage tank, go aboard ship, climb up and down vertical steel ring ladders leading to the bottoms of the ship tanks, a height of sometimes 100 feet. Large tankers may have from 15 to 20 of these tanks, all of which have to be inspected. The decks of the boats, at times get slippery with oil and this may be aggravated by rain as the boats lead in all kinds of weather. Some oil is shipped in the double bottoms of ordinary cargo or passenger ships and the inspectors have to crawl into these double bottom sections and search for signs of defects in the tanks or contaminations in the water. Sections are about 4 feet high and are connected by man-holes 18 inches in diameter. Ability to work in small spaces and intermittent openings is an important factor here. There is some slight hazard from toxic gases here although the tanks are previously tested by a chemist. There is exposure to sudden temperature changes when employee comes out of the double bottoms to the outside atmosphere.

Naval Inspector, Standard Oil Co. Refinery (rank).

Office of Inspector of Naval Material, Richmond, Calif. (see addendum entitled for Naval Inspector, Standard Oil Co. Refinery (officer).)

Naval inspector, Union Diesel Engine Co.

Office of Inspector of Naval Material, Oakland, Calif.

Inspector supervises pressure tests on various parts of the engines, checks finished parts of dimensions and defects, reckons and studies results of test runs of finished engines. Environment is good; hazards such as dust, fumes, sudden changes of temperature are not present; floors are level and aisles sufficiently clear for safe walking.

Naval Inspector, Utilities Electric Steel Foundry.

Office of Inspector of Naval Material, Los Angeles, Calif.

Employee must do some lifting while inspecting the steel castings (some of which weigh up to 100 pounds) and may find it necessary to roll castings around for inspection. There is a moderate amount of dust, some fumes, and changes of temperature.

Naval Inspector, W. P. Fuller and Co.

Office of the Inspector of Naval Material, Los Angeles, Calif.

Duties involve climbing stairs and a great deal of walking. There is some exposure to toxic elements and fumes. Excellent color vision is required, and good weight. A person with one eye and one arm, able to get around quickly, could fill this position.

Naval inspector, Warman Steel Casting Co.

Office of Inspector of Naval Material, Los Angeles, Calif.

Inspector checks heavy steel castings produced in this plant, observes tests on sample pieces performed by company inspectors. Foundry floor is small

and splattered with hot castings and molds. Men carry loads of molten metal and red hot pieces just out of the molds. There is hazard from overhead cranes, flying metal from chipping hammers and terrific noise. Severe temperature changes exist as insuperable goes from the pouring floor to the outside; considerable dust. Entire shift spent at this plant.

Observer in meteorology.

San Francisco Airport, San Francisco, Calif.

Employee must have one intact upper extremity and good gripping power in the secondary hand. This work requires a person in good health; one-third of the time is spent on a night shift. The observer is required to go up on a tower or road to read instruments every 30 minutes in good weather and every 15 minutes in stormy weather, regardless of outside weather conditions. His duties include climbing the tower, reading wind velocity instrument, clamping, interlocking, and at times removing instrument to the office for adjustment. The office work consists of answering the telephone, using a typewriter, tele-type machine, and calculating machine, reading data, compiling weather maps, and transcribing data received in code.

Outer marker.

Port Misson, San Francisco, Calif.

The outer is required to assist with engine room repairs as needed. The work requires an active, able person, since he must be able to work in and around rapidly moving machinery. Violent motion of the boat of liner requires work very difficult. This job is not suitable for women.

Operator, communications assistant,

Presidio of San Francisco, Calif.

This employee sends and receives messages in code, using automatic and manual telegraphic equipment. The operator transmits messages received on earphones and tape from automatic recording machines by use of typewriter. The equipment used consists of a hand set, hand key, typewriter, tape winder, automatic-tape perforating machine operated from a typewriter keyboard, and a tape scanning machine controlled by foot pressure on a treadle. All the work is done in a sitting position.

Operator, radio.

Hawthorne Point, Naval Drydock, San Francisco, Calif.

A person with one intact hand and good gripping power in the other could do this work. Keen vision and good hearing are also essential.

Operator, cryptograph.

Office of War Information, San Francisco, Calif.

Employee operates an electrically driven coding machine similar to an electric typewriter. Two hands are necessary in order to develop a proper rhythm and to efficiently operate the machine; good hearing is essential as operator checks with the central office by long distance telephone. Operator must be able to move about as he personally delivers decoded messages.

Operator, dredge.

Sepulveda Dam, Los Angeles District, United States Engineers, Calif.

Good grasping power in crippled hand is necessary.

Operator, elevator.

Main Post Office Building, San Francisco, Calif.

Post Office Building, Oakland, Calif.

Employee is required to drive and keep the floor clean and polish the brass in the own elevator (presently automatic with automatic control). No unsatisfactory environmental factors.

Operator, elevator freight.

United States Post Office, Rheem Annex, San Francisco, Calif.

Employee operates large platform elevators from the receiving dock to the mail sorting room, pushes loaded dollies on and off the elevator platform. Due to sudden and unexpected exposure to sudden and severe changes in temperature, person having a history of tuberculosis may not be accepted.

Operator, lead engineer.

Post Office and Court House Building, Los Angeles, Calif.

Duties chiefly supervisory, involve considerable walking throughout the building, checking necessary maintenance, recording fuel, water, and other utilities used, supervising operation of the air conditioning, heating, and ventilating equipment. Employee may be required to remain in the boiler room, answer the telephone. He periodically inspects boilers and tanks inside of them for inspection. He may often assist in the repairing and maintenance of the boiler room, heating, ventilating and air conditioning equipment, as well as any other mechanical equipment which is under his supervision.

Operator, machine.

Mare Island Navy Yard, Mare Island, Calif.

This work could be done by women; however, there is difficulty getting women to remain on the job because of the heat.

The employees surveyed were operating machines making rivets and bolts. Obviously the physical requirements for "machine operator" vary with the machine and the material being handled. On a hand-fed machine the operator has to pick up the material and place it in the machine, then manipulate the necessary levers. On an automatic machine the operator may only have to sit around and be ready to stop it if anything goes wrong. In general, machine operators have need of good grasping power in one hand and fair in the other, reasonable mobility of wrists, elbows, and shoulders. On a sitting job, legs could be absent.

Operator, motor-grinder.

Naval Ammunition Depot, Hawthorne, Nev.

A sturdy, muscular woman could do this work.

Operator, power sawing-machine.

Mare Island Navy Yard Flag Loft, Mare Island, Calif.

The operator sits at the machine all the time. The material to be sawed is brought to the machine, and finished pieces are taken away. The general environment, as to aisle clearance and ease of entry and exit, are satisfactory for blind persons.

Operator, sewage-disposal plant, senior.

Camp Roberts, Calif.

Operator reads gauge showing gas pressures and records these readings; he runs chlorine residual tests in the laboratory and cleans and shovels out sand from the bottom chamber and thence removes rugs from below the bar screen, collects screen.

Operator, telephone.

Main Post Office Building, San Francisco, Calif.

Post Office Building, Oakland, Calif.

Employee operates telephone switchboard, furnishes information to assistant at information center on telephone inquiries, and files. Hearing must be good. In one ear for ordinary conversation; moderate hypertension is not disqualifying.

Operator, tailoring-machine.

Mare Island Navy Yard, Flag Loft, Mare Island, Calif.

The operator stands in front of a table on which a tailoring machine operates. Pieces to be fitted are placed in the machine and moved about as necessary. The material is brought to the operator and taken away when the operation is completed. By attaching small rails to the work table to serve as guides for placing material, this operation could be done very easily by the blind. The general conditions in this loft, such as aisle clearance and ease of entry and exit, are good.

Ordnanceman.

Hawthorne Naval Ammunition Depot, Hawthorne, Nev.

These employees do a variety of work. Duties consist of removing bombs, shells, and explosives from railroad cars, handling fuzes and detonators, assembling mines, bombs, and shells. Objects handled vary from a 21-inch torpedo to a 38-inch earth shell pistol shell. The majority are heavy and require a very muscular individual to move them. The work includes adjusting fuse on bombs, transporting the empty cases into the filling house, supervising the operations of the filling machines in which the TNT is melted and in its molten condition poured into the empty bomb cases. The operator who does this must have a very keen color sense, because the automatic heating control cannot always be relied upon and hence he must be able to detect any change in color of the molten TNT as it flows into the bomb or shell casings. The change from light to darker colors indicates an impending explosion. The operator manipulating the filling valve has to be able to judge the color of the material very accurately.

Other work of a mechanical nature is done on the bombs after they are filled. This consists of installing the fuses and detonators; storing them in magazines and shipping them out in railroad cars and packing them with timber and other fastening materials. Many of the employees of necessity have to be shifted from one type of work to another.

All of the people doing this work are called ordnance workers. The minimum physical requirements for doing some of this work could be rather low. However, certain key employees would have to have their full physical ability.

Ordnanceman.

Mare Island Ammunition Depot, Mare Island, Calif.

The employees claimed no ordnancemen in this establishment perform many varied duties. They are shifted around from one job to another, working one day in one shop, perhaps the next in some other shop, doing altogether different work. They clean and recondition shell cases, inspect them, load, insert primers, make up loads of powder for the big guns, operate sewing machines. They are deliberately shifted from one job to another. A satisfactory full survey was impossible, due to necessary precautions taken by the Navy in not permitting civilians to visit all of the shops in the ammunition depot.

Packer.

Port Mason, San Francisco, Calif.

In this establishment the term "packer" is really applied to warehousing. He receives goods, checks it off delivery trucks, puts it into the buildings or mechanical carrels, and stores the stock in the warehouse. They are required individually to handle packages weighing up to 100 pounds. He assembles outgoing orders, bringing the goods to the delivery doors, whence it is trucked to the ships.

Packer, spark-plug section.

Sacramento Air Depot, Sacramento, Calif.

Employee replaces reconditioned spark plugs in engines. No tools are required. Work is brought to employee and packed sections are then taken away. Bench work.

Painter.

United States Post Office, Rialto Annex, San Francisco, Calif.

Employee paints small items and all of the equipment used in the post office in the process of sorting mail and the transaction of routine business (generally all bench work). Employees do not use the spray equipment. Dustless is permissible, provided employee is able to understand written or oral direction.

Painter.

Post Office Garage, San Francisco, Calif.

Employee paints automobile in garage paint shop, very seldom using spray equipment. Very little exposure to dust or other respiratory irritants.

Painting and varnishing wood.

Mare Island Navy Yard, Mare Island, Calif.

Women are performing the duties of this position very satisfactorily.

Photographer.

San Diego Naval Air Station, San Diego, Calif.

(See Lay-out man, San Diego Naval Air Station, San Diego, Calif.)

Pipe coverer and insulator.

Mare Island Navy Yard, Mare Island, Calif.

Woman could do this work satisfactorily. Some of the work is at a bench where a handicapped person with loss of a leg or an eye could perform the duties. Other work in this craft is on ships, where employee must be agile and able to work in almost any space or position.

Plumber.

Main Post Office Building, San Francisco, Calif.

Employee maintains plumbing and sanitary equipment in the building does repair and maintenance work. It is necessary at times for him to climb ladders, crawl in and out of small spaces in order to reach places on which to work. Work occasionally requires heavy lifting and pulling.

Puncher and cheater.

Mare Island Navy Yard, Mare Island, Calif.

Women could do much of this work, if the pieces to be handled are not too heavy.

Radio repairman.

Signal Corps Repair Service Shop, San Francisco, Calif.

This employee repairs and adjusts radio sending and receiving apparatus, as well as all other equipment used by the Signal Corps, excepting automotive vehicles. Most of the work is done at a bench some can be done while in a sitting position. Testing the sets at times involves working around wires charged with very high voltage currents. The working environment is good, the floor is clear, the atmosphere free from dust and toxic fumes, and there are no drafts or sudden, severe temperature changes. The work is not arduous.

Rib stitcher.

Alameda Naval Air Base, Alameda, Calif.

Rib stitchers work in pairs, taking the sewn fabric and applying it to the wing, rib stitching, and doing all of the steps necessary to complete the fabric work on the section assigned to them. This includes drilling of holes for bolts and screws.

Rigger (net maker).

United States Naval Net Depot, Tiburon, Calif.

This rigger makes large nets for the protection of the harbor mouths against entrance by submarines.

Good grasping power in the secondary hand is necessary. The employee are required to be able to read blueprints. This work could be done by husky women.

Rigger, submarine.

Pearlville of San Francisco, Calif.

This position is too strenuous and hazardous for women.
Sandblaster (ground duty).

Sandblaster helper.

Alameda Naval Air Base, Alameda, Calif.

Minimum weight for this position should be 140 pounds, since these employees have to manipulate a heavy hose carrying an air pressure of 100 pounds to the square inch.

Serviceman, hand.

Quartermaster Salvage Subdepot, Oakland, Calif.

Duties involve hand sewing, using needle and thread to repair garments. Work is done sitting at a table. One intact hand with good grasping power in the secondary hand is acceptable.

Serviceman, power sawing machine.

Quartermaster Salvage Subdepot, Oakland, Calif.

Employer repairs garments and various other fabric articles used by the navy (blankets, bedding, belts, sleeping bags, etc.) by inserting new pieces into them either by patching. Keen color vision is required to match closely the colour of the article to the material to be used in repairing garment. One leg amputee, if operator has satisfactory prosthesis, as leg pressure is used in control of machine.

Sheet metal worker.

Moffett Field, Calif.

The sheet-metal worker does work similar to that done in an aeroplane establishment, plus climbing in and around dirigibles from 5 to 100 feet above ground. Work on the fins and rara of these ships at times requires the employer to hang out in a high ladder with one hand and work with the other. Good grasping power in the secondary hand is essential.

The small volume of work makes it necessary that the sheet-metal workers who do work ordinarily assigned to aircraft mechanics; at times the aircraft mechanics have to do sheet-metal work at this field.

Storekeeper, assistant.

Alameda Naval Air Base, Alameda, Calif.

(See additional sentence for Storekeeper, junior.)

Storekeeper, junior.

Alameda Naval Air Base, Alameda, Calif.

These positions could be filled by women, provided there were enough men in the store to do the heavy work.

Storekeeper, principal.

Alameda Naval Air Base, Alameda, Calif.

The position requires a great amount of walking and going up and down stairs.

Storekeeper-gager.

Alcohol Tax Unit, San Simeon, Calif.

Employer keeps minute and accurate records of the operations of bonded warehouses, distilleries and other activities in private establishments making wine, distilled spirits and alcohols. He observes the operations of the establishments by checking the weights and volumes of the raw materials brought in to the plant and also checks the volume, labelling, and to some extent the quality of the finished products. He must be able to read blueprints, perform simple electrical and physical tests (using hydrometers and thermometers), and be able to trace various pipe lines throughout the building from their source to termination. Pipes are colored red, blue, orange, brown,

green, black, white, and some of the pipes are painted alternately different colors. He may have to climb stairs and ladders; none of the ladders being over 6 feet in height. On very rare occasions, he climbs up the barrel racks of whiskey, particularly when taking an inventory in the warehouse or checking one of the containers for damage or wreckage. He observes the handling of products (work being done by the proprietor and employees), and the delivery of the establishment. Deafness, providing employee can understand oral direction, and moderate hypertension will not disqualify.

Telephonist, radio.

Trucker, radio messenger.

Dayton Signal Depot, Los Angeles, Calif.

Employee performs most of the work sitting at a bench, but occasional has to lift apparatus weighing up to 60 pounds. One instant hand with good use in the respiratory hand is essential for the handling of small tools. The instant is exposed to toxic elements, fumes or dust, or to sudden changes in temperature. Suitable use of legs to get on and off of a high stool, and to move in and out of the building is required.

Temperer.

Alameda Naval Air Base, Alameda, Calif.

Most of the articles handled are not heavy, and a sturdy tool is readily available.

Threading cutter.

Mare Island Navy Yard, Mare Island, Calif.

A great deal of this work is done kneeling erect, or while sitting back on the heels.

Washer.

Post Office Garage, San Francisco, Calif.

Employee washes, cleans and polishes cars and automotive equipment. Persons with a history of tuberculosis or those receiving pneumothorax treatment are not acceptable due to exposure to cold and moisture on the washing rack. Moderate hypertension will not disqualify.

Watch and chronometer repairer.

Mare Island Navy Yard, Mare Island, Calif.

Persons with amputation or disability of the lower extremities, provide they can sit on a stool at a bench, can perform this work.

Watchman fireman.

Post Office Building, Oakland, Calif.

Employee fires boilers, makes rounds of building, and checks doors, windows, and lights. If on duty alone he does necessary emergency repair of building or equipment. He uses engineering repair equipment of all sort does plumbing, carpentry, and any incidental work required in emergency situations on boiler room equipment. He also does bell ringing; hearing therefore essential. Ability to adjust and regulate machinery in steam boiler room. Hearing in one ear is acceptable; persons with moderate hypertension will be accepted.

Welder.

Post Office Garage, San Francisco, Calif.

Employee (in shop) repairs and straightens fenders, chassis, and any kind of car and truck, does all welding required on all boiler repair. Loss of one foot, with satisfactory prosthesis, deafness, and moderate hypertension will not disqualify. History of tuberculosis and persons receiving pneumothorax treatment not acceptable.

Welder (welding).

Mare Island Navy Yard, Mare Island, Calif.

This welder places the bucket with the bottom attached in a weld machine, manipulates the machine by use of a hand lever and one foot, and removes the welded bucket from machine by hand, stand during entire time.

Welder (shear).

Mare Island Navy Yard, Mare Island, Calif.

This welder places the seam on the side of a can or bucket. The bucket placed in a welding machine, the current controlled by means of foot pedal and the welded bucket removed from the machine by hand. The work, scalding.

Welder (tack-weldables of buckets).

Mare Island Navy Yard, Mare Island, Calif.

This welder places the rolled edge pieces in a welding machine and tack-welds the seam at three points. The right foot controls the welding current by treadle.

Welder (welds handles to sides of buckets).

Mare Island Navy Yard, Mare Island, Calif.

This welder places the bucket, with the handles in the proper position, in a welding machine and spot-welds the ears of the handles to the sides of the buckets by manipulating a foot lever.

Welder, electric.

Welder, gas burner.

Port Mision, San Francisco, Calif.

Working on repair and alterations of ships exposes employee to contact with lead fumes from the painted surfaces on which they have to work. In a small compartment or closed-in space these fumes can attain a high concentration in the surrounding atmosphere.

Window washer.

Malin Post Office Building, San Francisco, Calif.

Employee washes windows outside and inside. Ledges are wide in most instances, but most of the window frames have no safety hooks. Many are 12 feet to 14 feet high requiring washer to use a step ladder lashed to the frame and resting on a ledge about 12 inches wide. Windows are quite hazardous; employee must possess depth perception, good balance, and free use of both hands and legs. Permissible disabilities are deafness, moderate hypertension.

Wireworker, aviation.

Alameda Naval Air Base, Alameda, Calif.

A considerable part of this work can be done sitting.

Worker, aircraft plexiglass (mechanic and metalsmith).

San Diego Naval Air Station, San Diego, Calif.

Worker cuts and applies plexiglass to the various parts of the planes. Work is divided into several operations—cutting the plexiglass by means of a portable router which is contrivuted to follow a template clamped to a work bench in such fashion that it holds a piece of plexiglass on the bench; router is curved around the outlines of the template and accurately reproduces the outlines in the plexiglass (this operation is done entirely by sense of touch); plexiglass sheets are then cleared of their paper covering and placed in an oven and when proper temperature is reached they are removed and placed by hand onto various forms which mould them to the required shapes. This operation may be done solely by sense of touch. There is a slight amount of walking involved. Rearrangement of benches would reduce this walking to just a few steps at a time.

Worker, airplane fabric.

San Bruno Air Depot, San Bruno, Calif.

Duties which include pattern making, cutting of cloth, use of power sewing machines, applying fabric to the wings, stretching, pinning, and final sewing can be performed by blind persons who have received a training course.

Worker, aviation fabric.

San Diego Naval Air Station, San Diego, Calif.

Employee cuts and applies fabric to the wings and other flat surfaces of planes being reconditioned and repaired. Some of the work is sedentary. Tools used are various needles and scissars. A blind person could do the work. In this station although the volume of fabric work on planes here is small, and for practical reasons it is necessary that the fabric workers be able to do all kinds of fabric work. Hearing is negligible unless worker has poor sight.

Worker, instrument, luminous and painter.

San Diego Naval Air Station, San Diego, Calif.

Operator sits at a special bench. Dial to be painted is held in the left hand, and the luminous material is applied with a very fine brush or stylus held with the right hand. Work is done under excellent light, using as an aid a large and powerful magnifying glass. There is a minimum of moving around. Parts handled are small. There is some slight exposure to radioactive material, but no other unfavorable factors. Fairly good vision in one eye is required. Hearing is immaterial providing the operator can receive instructions visually.

Worker, metal.

Quartermaster Salvage Subdepot, Oakland, Calif.

Employer repairs and straightens canteens and mess kit gear used by soldiers. Work is chiefly sedentary. Tools used are various wooden mallets and steel bars which are inserted into the hollow vessels to force out the metal in its original contour. Good grasping power in both hands necessary as some of the dents in the canteens are corrected by hand pressure.

DEPARTMENT OF DEFENSE

Artist, illustrator.

War Department, Pentagon Building, Washington, D. C.

Duties involve drawing and painting. A person with an amputated lower extremity would not be satisfactory since the duties involve considerable moving.

Artist, illustrator (copy preparation).

War Department, Pentagon Building, Washington, D. C.

Employee sits on rather high stool and must have intact one lower extremity, chiefly for the purpose of balance. A totally deaf person could perform these duties, but it would not be preferable to combine him in the lower grade or trainee positions where a considerable amount of oral instruction is necessary. Amputation of one upper extremity is not an acceptable handicap.

Chemical mixer, photo processor.

War Department, Pentagon Building, Washington, D. C.

Duties involve lifting and are predominantly in nature; an employee with organic heart disease fully compensated would not therefore be premissible. Considerable fingers, present in the chemical mixing room, prevent acceptance of persons with goutitis or a similar condition.

Clerk, mailroom.

War Department, Pentagon Building, Washington, D. C.

Duties can be sedentary in nature and a severely handicapped employee could perform them satisfactorily. He should have one intact upper extremity and hand, and good grasping power in the secondary hand.

Clerk, negative file (photo process).

War Department, Pentagon Building, Washington, D. C.

Duties are light and involve filing negatives in the store room. In order to reach the top shelves, the employee must step on a small stool. Grasping power in the secondary hand is desirable. A deformity of the spine should not disqualify provided function is satisfactory and employee can bend over sufficiently for filing on the lower shelves.

Clerk, book, library section.

War Department, Pentagon Building, Washington, D. C.

Employee sits at a rotating table and resembles sections of books, pamphlets, or magazines. Duties are light, no environmental factors are present. No difficulty should be experienced either in the use of systems by employees with severely crippling defects of the lower extremities. Manual dexterity is important, and if retained, defects of hands or fingers should not disqualify.

Draftsman, architect.

Draftsman, architect (copy preparation).

(See in-line descriptive sentence for Artist, illustrator.)

Electrical, maintenance.

War Department, Pentagon Building, Washington, D. C.

Duties are chiefly sedentary. Skill is more important than physical fitness, but not all of electricians could be severely handicapped.

Fitter, hand.

War Department, Pentagon Building, Washington, D. C.

Duties are sedentary and require a person to be physically fit. Deformities causing little or no limitation of function are not disqualifying.

Groom, laundry.

War Department, Pentagon Building, Washington, D. C.

Employee must be agile and have a fairly mobile spine, but in some cases this job could be adapted to the physically handicapped.

Mechanic, lathe (all types).

War Department, Pentagon Building, Washington, D. C.

Duties are light but a number of physically fit personnel are required in the shop to "fill in" and do what occasional lifting or heavier work is necessary. The operator generally sits on a stool and observes the lathe for as long as one hour at a time.

Mechanic, maintenance, heavy duty.

War Department, Pentagon Building, Washington, D. C.

The mechanic works principally on large machinery, such as printing machines. Duties are arduous and require physically fit employees.

Mechanic, micrograph, maintenance.

War Department, Pentagon Building, Washington, D. C.

A micrograph machine is distinguished into three different sections; different types of physically handicapped employees can be assigned duties according to their physical abilities.

Mechanic, maintenance, maintenance.

War Department, Pentagon Building, Washington, D. C.

Duties involve lifting of heavy parts. This arduous duty is not sustained, and much of the work is light or moderate in nature. Employee must have functionally strong lower extremities.

Mechanic, phonocat, maintenance.

War Department, Pentagon Building, Washington, D. C.

Employee must be agile in order to climb all over the large machines. Hearing must be normal. Good vision is necessary as glass bearings are used in the machine. Some minor handlenses would be acceptable but should be carefully evaluated before individual placement is made. Operator (photo process).

War Department, Pentagon Building, Washington, D. C.

Duties are chiefly voluntary. An employee with a disability of both lower extremities should be able occasionally to transport himself around the room (use of crutches or canes permitted). Environment is good and free from noxious gases or fumes. A person blind in one eye may be accepted, but the other eye must be normal or easily corrected to normal. Good vision is required, but depth perception is not necessary. Operator, hand-wringing machine.

War Department, Pentagon Building, Washington, D. C.

Employee must have two strong hands intact and good bilateral vision which is essential in the precision work involved. A motor is attached to the machine to create a vacuum and remove the considerable amount of metal dust present during operation of the machine. It is therefore doubtful whether an employee with arrested tuberculosis should be assigned to work of this type.

operator, blueprint.

War Department, Pentagon Building, Washington, D. C.

Duties are arduous and involve considerable lifting. Considerable freedom of motion of the large joints of the body is required. Depth perception is essential.

operator, cutting-machine.

War Department, Pentagon Building, Washington, D. C.

Arduous duties require a mentally and physically fit employee. Employees in the blinding machine shifted from one type of duty to another, according to the work load. Deafness would not disqualify.

operator, cylinder-grinder.

War Department, Pentagon Building, Washington, D. C.

Employee does rubber grinding exclusively. Dust represents a possible hazard to an employee with arrested tuberculosis.

operator, drill press.

War Department, Pentagon Building, Washington, D. C.

Mechanical aptitude rather than physical fitness is more important as the machine does most of the work, and the physical factors involved are relatively simple.

operator, drill-press, paper.

War Department, Pentagon Building, Washington, D. C.

Agnathia loss of some fingers and minor defects or disabilities of the fingers would not disqualify.

operator, gathering machine.

War Department, Pentagon Building, Washington, D. C.

Skill and knowledge are more important than physical fitness. Deafness would be an asset rather than a hindrance. Machine stops automatically if not properly functioning, and a little red light indicates the particular part causing the trouble.

operator, lithograph press.

War Department, Pentagon Building, Washington, D. C.

An employee handling the Harris press can operate the very few Pittsburgh rotary-fed offset printing machines here. Considerable heavy lifting and activity are involved. Depth perception is required. There is considerable noise in the vicinity of these machines; one must talk loudly. Hearing may be impaired, but should be sufficiently acute to detect any changes in the action of the presses. Operators should be physically fit.

operator, mimeograph-machine.

Operator, multithread machine.

War Department, Pentagon Building, Washington, D. C.

Duties are relatively light, but employee must be capable of standing at work and must have good grasping power in secondary hand.

Operator, nailer.

War Department, Pentagon Building, Washington, D. C.

Position is similar to that of a typewriting operator, but on the nailer is a smaller machine, the work is considerably lighter.

Operator, plodder-toucher.

War Department, Pentagon Building, Washington, D. C.

Duties are mostly sedentary but on some jobs it is necessary for the operators to stand at their machines. It is possible for one person with various physical handicaps.

Operator, saddle stitcher.

War Department, Pentagon Building, Washington, D. C.

Employee sits at side of machine and places folded papers on the carier. Only sufficient manual dexterity to pick up paper is required.

Operator, stamping machine.

War Department, Pentagon Building, Washington, D. C.

Employee sits and operates machine by means of a foot pedal; one lower extremity (preferably the right) is required. He must be manually dexterous.

Operator, surface grinder.

War Department, Pentagon Building, Washington, D. C.

Operator stands or sits at a high stand. There is slight danger from flying metal, but it is unavoidable that employee have bilateral vision since there is a hazard of his being blinded by a flying particle of metal. Because of the possible hazard of metal dust penetrating unprotected lesion, a person with arrested tuberculosis would not be recommended for this position.

Operator, varitype (copy preparer).

War Department, Pentagon Building, Washington, D. C.

Work is performed in a large air conditioned and well-lighted room; no dust or unusual hazards are present. No ramp leads directly to this room, but a person crippled severely enough to require the use of a wheel chair, could be lowered to the basement level by means of a freight elevator.

Padder.

War Department, Pentagon Building, Washington, D. C.

Employee makes scratch pads, remembers and uses them. Glue is applied and there is no hazard present other than burns which may be received from the hot glue.

Photolithographer (photo press).

War Department, Pentagon Building, Washington, D. C.

Employee works around powerful arc lights. Vision should be bilaterally good as one of the chief hazards is injury to the eye. Duties, not unusually arduous, are fatiguing and place the employee under a strain which would render a person with arrested tuberculosis unsatisfactory.

Plate maker (photo press).

War Department, Pentagon Building, Washington, D. C.

Duties involve considerable walking, bending, and squatting. Amputation of one foot rather than one lower extremity is permissible, but employee should have good function of both knees. Persons with a disabled hand or with amputation of one finger on that hand, should have a good grip. Some forms present might be sufficiently irritating to be a hazard to a person with arrested tuberculosis.

Trimmer, blueprint.

War Department, Pentagon Building, Washington, D. C.

Employee uses two hands, infant, and must be capable of standing constantly and move considerably during the whole work day. Work, not usually arduous, may be so arranged that persons with organic heart disease (fully compensated), or arrested tuberculosis, would not be unduly tired.

Typist, electromechanical (proportional spacing).

War Department, Pentagon Building, Washington, D. C.

Typist, electromechanical (proportional spacing) requires a greater degree of skill than typist (electromechanical) regular; considerable oral instruction is given.

Wrapper.

War Department, Pentagon Building, Washington, D. C.

Employee must have considerable strength in hands and forearms. Many defects or disabilities of the upper extremities would not interfere with these duties. Considerable squatting and walking, and some lifting is involved.

INDEX
